TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

279, 281 & 283 BROADWAY, NEW YORK.

Berlin Office, 23 Charlotten Strasse.
London Office, 137 Cheapside, E. C.
Melbourne Office, 231 Flinders Lane.
Paris Office, 20 Boulevard Montmartre.

SUBSCRIPTION, $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 4, 1896.

While it would have been possible to name a stronger commission in some respects than that appointed by the President to investigate the Venezuela boundary question, it is still true that the body as constituted is a decidedly capable one. Mr. Justice Brewer, of the Supreme Court, easily takes rank as one of the very ablest jurists in the federal service. Mr. Andrew D. White has had considerable experience as a diplomat, which should add strength to the commission from that point of view. Mr. Frederick R. Coudert has for some time been counted among the leaders of the New York bar, and was one of the counsel for the United States before the Paris tribunal of arbitration. President Daniel C. Gilman is chiefly notable as an educator, and Judge R. H. Alvey, the remaining member, is the Chief Justice of the Court of Appeals of the District of Columbia. The commission, it is expected, will organize almost immediately, and will prosecute its investigations almost wholly in Washington.

Under the plan of committee reorganization adopted by the Senate, the Committee on Finance has fallen under the control of the Democrats, and in so far as the committee is able to influence the ultimate action of the Senate, the free coinage movement will receive a certain amount of impetus. Owing to the absence of three members on Thursday, the day set for the first meeting of the committee, the proceedings resulted in a deadlock. It is believed that only the absence of the senators referred to prevented the adoption by the committee of a free coinage substitute for the bond bill sent over from the House. It is a very disappointing circumstance that at the outset of the Senate's deliberations on financial measures the control of such an important committee should have fallen into the hands of retrograde elements.

It was announced a day or two ago that the commissioners appointed by the United States and Great Britain to delimit the boundary between Alaska and Canada had signed a joint report for presentation to their respective governments. What the nature of the report is cannot yet be stated with definiteness, but from the statements of usually well-informed press correspondents at Washington, it appears that the report is in reality a report upon the surveys made, which does not go the length of agreeing upon a boundary line, but, in effect, arrives at the conclusion that a boundary line cannot be run as laid down in the treaty between Russia and Great Britain. If this be the case the report appears to open the way to further negotiations looking to the settlement of the boundary line.

The state of New York has accredited Mr. Poultney Bigelow as its representative to discuss with the authorities of the German empire the question of the status of American insurance companies in Germany. It appears that Superintendent Pierce has requested the Prussian Minister of the Interior, through Mr. Bigelow, to inform him if the certificate of the New York state insurance department as to the solvency and good repute of American life insurance companies will be accepted by the minister. Superintendent Pierce asks for this information because certain Prussian companies are applying to be admitted to do business in New York state, and the licenses of several others now authorized are to expire in January. Gov. Morton has requested Secretary Olney at Washington to notify the American ambassador at Berlin, Mr. Runyon, that Mr. Bigelow had been authorized to represent the insurance department of the state of New York in this matter, and Secretary Olney has duly notified Ambassador Runyon to this effect. Mr. Bigelow has presented his papers to the Prussian Minister of the Interior and is now awaiting the decision. It is assumed that if the Prussian minister declines to give this concession to the American companies the insurance department of New York state will retaliate and will rule out all Prussian life insurance companies doing business in the state, and that other states will follow the example of New York.

The subject of road improvement is dealt with in the annual message of Governor Morton of New York state. In referring to the expected report of a special committee on good roads, he says that the report is believed to be satisfactory to the friends of road improvement, and will convey recommendations of measures for the consideration of the legislature which comprise a progressive and comprehensive plan of improvement of the public highways. The governor notices the fact that while there is a united popular sentiment as to the desirability of a good system of roads and that there is a common interest in the common highways, there is a radical divergence of opinion as to the method of raising the funds necessary to provide such a system of travel and intercommunication. He expresses the hope that the legislature will deal with this question in a broad-minded, yet conservative and just way.

Government receipts for the month of December amounted to $26,288,937, an increase of about $300,000 as compared with the preceding month, but of over $4,400,000 as compared with the corresponding month of 1894. The largest gain over December of that year was shown by internal revenue, though the customs revenue also showed an increase. The expenditures for the month amounted to $25,814,317, which represents a decrease of over $1,300,000 as compared with the preceding month, and of a slightly smaller amount as compared with the corresponding month of the previous year. Decreases were shown in every item, with the exception of expenditures for war and interest.

For the six months ending with December the receipts amounted to $167,568,053, an increase of over $8,000,000 as compared with the corresponding period of 1894. There was an increase of over $12,600,000 in customs duties, but a decrease of over $5,200,000 in internal revenue receipts. Miscellaneous receipts showed an increase of nearly $800,000. The expenditures for the six months amounted to $182,962,760, an increase of over $2,000,000 as compared with the corresponding period of 1894. The most noteworthy change was a decrease of nearly $4,500,000 in civil and miscellaneous expenditures, the next in importance being a decrease of over $3,000,000 in expenditures on account of the navy, and an increase of over $2,500,000 on account of interest. As will be seen, there was a deficiency of nearly $15,400,000 for the six months, whereas for the corresponding six months of 1894 the excess of expenditures over receipts amounted to over $27,500,000.

National bank circulation at the close of December amounted to $213,627,821, which represented a decrease of $243,375 for the month, but an increase of $7,114,168 for the twelve months ending therewith. The portion of the circulation based on the deposit of bonds amounted at the end of December to $190,616,160, which represents an increase of $146,634 for the month, and of $13,948,694 for the year ending therewith. The portion of the circulation based on the deposit of money amounted to $23,011,661, a decrease of $390,009 for the month, and of $6,834,526 for the year ending therewith.

A crisis has been approaching in the South African republic for some time. This week it culminated in an unexpected manner. The opening of the gold mines at Johannesburg and elsewhere has drawn to the state a large alien population, which, under the constitution of the republic, cannot share full rights of citizenship. The "Uitlanders," or foreigners, are a majority of the population, and control the gold mining and business wealth of the republic. The legislative and administrative functions are monopolized by the Boer minority, and this, it is alleged by the "Uitlanders," has resulted in inefficiency, corruption and oppressive taxation and restriction of the mining interests. These complaints were lately voiced by the president of the Witwatersrand Chamber of Commerce, the representative body of the capital invested in the Transvaal. Restiveness on the part of the mining population had been shown, and an open revolt was feared. The invasion of the Transvaal by an armed force of the British Chartered Company, which was defeated by the Boers, and its leader, Dr. Jameson, captured, has followed. This high-handed action was disavowed by the imperial authorities in London, by the Cape Colony government and by the Chartered Company itself. The situation, however, is still uncertain, and it remains to be seen whether the Boers will consent to a peaceable adjustment of the grievances of the Uitlanders, particularly as the republic is in receipt of so much sympathy from the continental powers.

In his address opening the Canadian Parliament on Thursday, Lord Aberdeen congratulated the members upon the evidence of increased activity in the various branches of commerce and industry, and in particular noticed the extension of mining enterprises in British Columbia, where vast mineral resources are in certain localities being now developed and utilized upon something like an adequate scale. Referring to the fact that the representation of the Dominion government and the suggestions of the Ottawa conference respecting steamship communication have resulted in the announcement by the imperial authorities of their willingness to grant substantial subventions toward the Atlantic portion of the scheme, he expressed the hope that this will insure the successful establishment of a line of steamers between the United Kingdom and Canada, which, in point of speed and equipment, shall fully meet all requirements. He also referred to the fact that the Dominion government has learned with satisfaction that it is the intention of the Secretary of State for the Colonies to appoint a commission to consider the proposed Pacific cable to connect Canada with Australasia.

THE YEAR IN THE STOCK MARKET.

Other factors, notably the midsummer revival of business activity, the general advance in prices of commodities, and breakdown of the Kaffir speculation abroad, and the Venezuela question, have had a part in determining the course of the American stock market during 1895. The principal influence throughout the year, however, has been the condition of the Treasury. Everything else was really subordinated to it, and the irregularity which speculation exhibited can be traced without hesitation to the condition of public sentiment in regard to the position of the government gold reserves. In other words, the currency has been the controlling factor in speculation and investment. It is, indeed, possible to trace the general inclination of the stock market by reference to the sage, and the feeling of dismay which temporarily asserted itself in financial and speculative circles on both sides of the ocean. December 21 marks the lowest point of the year for many of the active stocks. But the rally which ensued, and which enabled the market to close on December 31 at a substantial recovery and at a level materially above the average on January 1, 1895, was due not so much to the subsidence of the war scare as to the assurance that the administration, recognizing the futility of dependence on Congress for financial remedies, would issue $100,000,000 of bonds for gold, and that reliance could be placed upon our own financial interests to supply it, and thus safeguard the Treasury once more.

The range of quotations for the leading stocks dealt in on the New York Stock Exchange has thus been very wide, while the volume of transactions is considerably in excess of the preceding year's record. The total recorded sales in 1895 in the institution in question are put at 66,440,576 shares, as compared with 49,275,736 shares in 1894. Nor should the fact be neglected that in other similar markets of prominence in the country the exhibitions of a rising speculative spirit on the part of the public took the same form. The Philadelphia market, in particular, indulged in a wild speculation in a variety of traction, electrical and gas shares and obligations which culminated during the autumn in a serious breakdown. Boston was less agitated by the influences in question, though the rapid appreciation in some of the copper-mining interests which are traded in there was a noticeable feature. The rising interest in gold-mining operations can scarcely be said to have affected the stock markets of the east, but the institution of mining exchanges in the west, of which the Denver and Colorado Springs are the chief, and in which the shares of mining corporations, principally in the Cripple Creek and Leadville districts, have been the objects of attention, is well worthy of mention.

Apart from the fact that foreign interests, headed by the Rothschilds, took part in the government bond syndicate of February last, the European element has been adverse to the American stock market during the year just closed. By the efforts of the syndicate a considerable amount of American railroad and other bonds were placed abroad during the spring and summer. Apart, however, from the distrust which the currency policy of the United States has created abroad, there were other causes which tended to prevent London and the continent from responding to the bullish influences that asserted themselves here. The gold-mining craze, based on the magnificent results which have attended the operations of the South African mines of the Witwatersrand, resulted in a wonderful speculation in such values, not only in London but at Paris and on the continent. The absorbing character of this movement withdrew all public attention from "Americans," and when the crash resulting from over-speculation came in the autumn there was a heavy selling movement by holders of Americans to realize funds. The panic in London and Paris was not allayed than the renewed prospects of currency troubles on this side caused a corresponding degree of hesitation about buying our securities, and the war scare growing out of the Venezuela controversy was largely responsible for enormous foreign sales of our stocks and bonds. This last was one of the chief causes of the violent break in stock prices which culminated two weeks ago, and it is safe to say that at the close of the year the floating supply of American stocks in the London market is on a much smaller scale than it was a year ago.

The work of reconstructing bankrupt properties has made great progress during the year. Notable instances of this are afforded in the Treasury's gold reserve, upon which its ability to maintain the parity of all portions of our variegated currency depends. This fund at the beginning of 1895 was only $86,000,000 or so. In the first week of February it had been reduced to about $42,000,000, the lowest point since the resumption of specie payments by the government. The operations of the Belmont-Morgan bond syndicate, extending from February to last August, gradually built up the Treasury holdings of free gold until they reached a total of about $107,000,000. From this point, when the syndicate's efforts in behalf of the government ceased, down to the end of the year, there was a renewal of the drain, leaving the amount of free gold in the Treasury about $64,000,000, with a further large bond issue already practically determined on.

The several periods into which the speculative stock market for 1895 naturally falls can be very accurately set forth by reference to the foregoing account of the reserve. The early shrinkage of the fund in question

* Philadelphia quotations, par $50. ‖ Boston quotations.

of the favorable crops and increasing earnings upon the granger and trunk-line shares is a noteworthy feature. The only group, in fact, which failed to respond to these influences was the stock of the anthracite carrying railroads, which have been handicapped by overproduction and unremunerative prices. Nor have the industrial group of stocks lost their rank as leading vehicles of speculation, the tendency of those companies which depend upon the iron industry to appreciate furnishing a reflection of the conditions in that connection, and being, in fact, an index to the prevalent operative tendencies of a remarkable stock market year.

TROUBLE FOR THE JOINT TRAFFIC ASSOCIATION.

Trunk-line railroad officials, it is declared, are inclined to welcome the investigation of the new traffic and rate agreement by the courts. Several of the presidents of the companies in question have publicly expressed the opinion that the action which Attorney-General Harmon has directed the United States District Attorney for the Southern District of New York to institute will result in a judicial ratification of the agreement. The compact, it is held, was only adopted after a prolonged discussion involving the submission of the very question of its legality to a board of eminent counsel, whose opinion on the agreement in its final form was that no construction could be put upon it which involved violation of the Interstate Commerce act. The proceedings now commenced will, however, put this to the test. The Interstate Commerce Commission having requested the Attorney-General to act, that officer has set the machinery of his department in motion, and an application for an injunction against the companies forming the new pool or association is the result.

Nevertheless, there are indications of nervousness in railroad circles in connection with the matter. The new agreement was not adopted without misgivings as to whether it could be successfully maintained in the face of the anti-pooling provisions of the law. Even before it was ratified by the companies themselves there were mutterings. Congress has persistently refused to amend the law and make pooling contracts permissive. As soon as Congress met the matter was taken up, and the Interstate Commerce Commission interrogated. While the commission's answer was confined to the transmission of a copy of the published agreement to the Senate, where the request for information originated, it will be seen that no time was lost in bringing the question in its legal aspects to the attention of the law department of the government, with the above outcome.

There is a prevalent idea that these proceedings will either make or break the Interstate law. The contention of the railroads is that a division of *tonnage* does come under the provision of the sections which prohibit pooling. Much depends upon the decision of the United States Supreme Court in a case now before it, in which the right of the commission to compel railway men and shippers to testify is involved. The suit will not, however, be argued till some time in the present month, and a decision will come later. It is, however, expected that the government authorities will push both this and the case now started against the trunk lines, with a view to vindicating the law and securing its enforcement. The sentiment of the Interstate Commerce Commission on the subject is indicated by the following sentences from its annual report: "The tendency toward railway federation is very marked, and indicates a future combination of carriers wielding such extraordinary power as to constitute, in the estimation of many people, a serious menace to commercial freedom. That power will be deprived of its principal danger if the authority of the state to prevent excesses and inequalities finds ample expression in enforcible methods for fixing the standard of charges. While the commission is impressed with the evils attending the presen tsystem of competition, and concedes that the practical results of that system upon the railroads and the public are unsatisfactory in many respects, it nevertheless believes that the reëstablishment of pooling without adequate restrictions and further remedial legislation would be unwise, since otherwise it would be in the power of the combination to charge excessive rates for the transportation of staple commodities and necessaries, and thus to deprive the people of the benefits arising from the competition which now exists. It is necessary, in our opinion, that rates established by the combination should be subject to effective control by the commission. Under the restrictions suggested pooling would be permitted on condition that the corporations so privileged submit themselves to the only legal authority which can prevent an abuse of the privilege."

The views of some of the most prominent railroad men are of interest at this juncture. President Chauncey M. Depew, of the New York Central, is quoted as saying: "This action of the Interstate Commerce Commission is decidedly welcome. Before the presidents signed the agreement it was submitted to forty of the ablest corporation lawyers in this country, and every one of them agreed that it was perfectly legal. Now, if the Attorney-General's office proceeds against the Joint Traffic Association it will give us the opportunity to have the United States Supreme Court agree with these eminent legal lights, which I have no doubt it will do. I do not know upon what grounds the commissioners based their opinions, therefore I am not in a position to discuss the legal aspect of this case, as viewed by the commissioners. However, I cannot see how we are violating any law by enforcing the new alliance, for it is drawn up to conform to all the laws relating to railroad traffic."

President O. D. Ashley, of the Wabash, expressed himself as follows:

"I can see nothing whatever illegal about the new agreement. I suppose it is the article providing for an equitable division of the business that the commission objects to, but it is a well-known fact that the railroads have been dividing traffic for five years or so, and the commission has heretofore taken no action to put a stop to it. It hasn't been because the commission was unable to get evidence, for no concealment was made of the fact." George R. Blanchard, the veteran manager of railroad pools and the new commissioner of the Joint Traffic Association, said: "Thirty-one companies have signed the agreement, in every case with the approval of their board of directors, after an expression of opinion from counsel. In every case the attorneys decided that the agreement was in conformity with the Interstate Commerce law. It is in the interest of all concerned to have the matter brought before the courts and adjudicated."

INVESTMENT MARKET IN 1895.

Investments shared in the irregularity which distinguished the share market throughout the year 1895. Just as is the case with the speculative classes of securities, the year can be roughly divided into four well defined periods, a decline lasting from January 1 till March, the cause for which was the depletion of the government gold reserves by shipments of specie to Europe, and the failure of the expiring Congress to provide any adequate remedy for the financial disorder. With the adjournment of Congress and the successful launching of the Morgan-Belmont bond syndicate, the bond market entered upon a decidedly better state, which continued to prevail till the early autumn. Reflecting, as it did, the revived confidence of the country, the general rise of prices for commodities, the generally favorable crop prospects, the visible impetus to industry, and the better prospects of the railroads, the movement at times was akin to a veritable boom in bond prices. The reaction which commenced in September was a natural process. It was due partly to the extent to which both investors and speculative interests had overdiscounted the favorable elements in the situation, and partly to the renewed evidence that relief to the Treasury by such expedients as the sale of small amounts of bonds for gold, without any radical change in the currency system, could only be temporary. The final withdrawal of the Belmont-Morgan syndicate's efforts to control the exchange market, and prompt return of exchange to a gold-shipping level, affected investments probably in a lesser degree than it did the stock market. The influence in question, however, was felt to extent extent, and it was followed by another depressing factor in the shape of the violent collapse of the Kaffir speculation in London and the continental markets. The breakdown of inflated values there necessitated the marketing of considerable amounts of all classes of American bonds held abroad, and the return of a large proportion of the government bonds placed in the European markets by the syndicate was also disturbing in its effects. This foreign liquidation was over by November last, but it was almost immediately succeeded by the revival of a lively fear in regard to our own Treasury. From September till December the investment market, therefore, exhibited a downward tendency and a restricted demand. The flurry in the markets which culminated in the semi-panic of December 20–21 last was destructive to bond values, particularly of the speculative class, and though the recovery was instant, continued during the last two weeks of the year, it nevertheless left the general range of bond values on the Stock Exchange considerably below the highest level of such values for 1895.

The table presented herewith affords a basis for comparison of such securities extending back for several years. Several points stand out prominently in reference to the movement of such prices in 1895. It will be seen at first glance that prime investments, the class of bonds affected by the careful people, who desire safety above all other considerations, were, as a rule, lower in the year under consideration than in 1894. In many cases bonds of this kind touched a lower price than in 1894, and failed to reach as high a level as they did in the preceding year. On the other hand, in the low-priced bonds—those of a more or less speculative character, or which represented properties which have been or are bankrupt—the appreciation was in most instances marked. In fact, the speculative tendencies of the year were exhibited in the bond list equally with the railroad and industrial stocks, while the demand for the higher grade of investments, which had caused that kind of securities to reach, in some instances, unreasonable high prices, appears to have been diverted.

The selling by foreign holders of investment securities during the Kaffir panic last autumn has been mentioned. It should be further stated that the decline of December on the Venezuela difficulty was marked by large sales of a similar nature for foreign account, but that in the spring and early summer the government bond syndicate was successful in placing several large blocks of railroad and municipal securities with foreign financial interests.

THE INTERSTATE COMMERCE REPORT.

In its ninth annual report, just transmitted to Congress, the Interstate Commerce Commission directs attention anew to the fact that the special weakness of the law is the want of finality and binding force in the decisions of the commission. It suggests that the decision of the commission, after full hearing of the parties, should be made to stand as a rule of conduct prescribed by

public authority, unless the courts, upon examination of the record thus made, shall find therein some material error, plainly prejudicial to the defeated party, which furnishes sufficient reason for refusing to enforce that decision. This, the commission declares, is the change in the law of most immediate and special urgency.

The commission points out that the tendency towards railway federation is very marked, and indicates a future combination of carriers wielding such extraordinary power as to constitute, in the estimation of many people, a serious menace to commercial freedom. That power will be deprived of its principal danger if the authority of the state to prevent excesses and inequalities finds ample expression in enforceable methods for fixing the standard of charges.

The commission declares that the regulating tribunal should have adequate authority to ascertain excesses in railroad charges and to enforce with respect thereto the observance of relative justice. That legislation to this end is a valid and appropriate exercise of constitutional power possessed by Congress has, it is urged, been repeatedly declared by the highest judicial authority. When rates devised and applied by the railroads themselves are complained of by shippers on the ground that they are excessive or relatively unjust, and such complaints have been investigated upon full notice to the carriers and fair opportunity for hearing, the determinations of the commission in such cases, it is suggested, should be binding upon all parties to the controversy and mutually observed by them as the only lawful rates for the transportation in question, unless judicial scrutiny of the proceedings had before the commission shall discover therein errors of fact or conclusion so plainly prejudicial to the carrier as to justify the courts in refusing to enforce the disobeyed requirement.

Among other suggestions made in the report regarding amendments in the law, the commission recommends that tariffs and annual reports of carriers on file with the commission should, by express provision in the statute, be made competent evidence and self-provable as prima facie what they purport to be for the purpose of investigation by the commission, and in all judicial proceedings; that the commission be in terms authorized to issue orders requiring rates or charges, facilities or practices, found unlawful to be changed, modified or corrected, as in such orders specified, and that it shall be the duty of the carrier or carriers to comply with such order within a reasonable time fixed by the commission; that the authority of the commission to determine and prescribe the form of rate schedules, now provided in the sixth section, should be more clearly defined in the statute so as to include determining and prescribing the contents and arrangement of such schedules beyond any question; that the sixth section should also provide definitely that carriers parties to any such joint tariff shall be specified therein, and such evidence of concurrence or acceptance thereof by the carriers be furnished, as the commission may require or approve, and that the twentieth section should be so amended as to fix the date within which the annual reports of carriers shall be filed with the commission, and to provide that this requirement be enforced by adequate penalties for non-compliance.

The report contains an account of the proceedings of the commission touching the action taken by it in relieving carriers from the operation of the long and short haul clause, in extending the time for compliance with the provisions of the safety appliance act of 1893, and in passing upon certain traffic agreements, an account which forms a useful summary of its work during the period covered. The commission strongly condemns the practice of ticket brokerage, renews its recommendations for such amendment in the law as will give the commission authority to make examinations by agents deputed for the purpose, and for such additional legislation as may be deemed necessary to secure the interchange of traffic and the continuous carriage of freights from place of shipment to place of destination, and advocates the prompt enactment of suitable legislation by Congress to promote further progress towards uniform classification. The commission's completed statistics are, as usual, too belated to be of use except historically.

WORLD'S AVAILABLE WHEAT STOCKS.

Details of stocks of wheat available, both coasts of the United States, together with those in Canada, on January 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

Bushels.	*East Rocky mountains.*	*Pacific coast.*	*Grand total.*
January 1, 1806	97,769,000	7,116,000	104,885,000
January 1, 1895	113,707,000	13,302,000	127,009,000
January 1, 1894	99,542,000	10,721,000	110,263,000
January 1, 1893	107,057,000	9,305,000	116,362,000
January 1, 1892	69,213,000	8,843,000	78,056,000
January 1, 1891	47,116,000	12,944,000	60,061,000
January 1, 1890	54,227,000	7,565,000	61,792,000
January 1, 1889	52,740,000	5,765,000	58,506,000

Wheat stocks east of the Rocky mountains, in the United States and Canada, on the 1st instant, were about 15,500,000 bushels smaller than one year ago, about 1,700,000 bushels smaller than on January 1 two years ago, and 9,200,000 bushels smaller than on January 1, 1893, although materially larger than on January 1 in preceding years.

Stocks of wheat available on the Pacific coast, which include accumulations at San Francisco, Stockton and Port Costa in California, Portland, Ore., and Tacoma and Seattle, in Washington, amounted to 7,116,000 bushels on January 1 this year, or 6,000,000 bushels less than one year ago, about 3,500,000 bushels less than two years ago, and varying amounts less than on January 1 in the four preceding years, 1890 to 1893, inclusive.

Total stocks of available wheat in the United States and Canada, both coasts, January 1 this year amounted to 104,885,000 bushels, about 22,000,000 bushels less than one year ago, a little more than 5,000,000 bushels less than two years ago, and about 10,500,000 bushels less than three years ago. As compared with corresponding totals on January 1 in preceding years, the total in sight on the 1st instant was much larger.

The total quantity of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on January 1, added to available stocks in Europe, as reported exclusively to BRADSTREET'S, is as follows:

	U. S. and Canada, East of Rockies.	*Pacific coast, U. S.*	*U. K. and continent and afloat for Europe.*	*Grand total, bushels.*
Jan. 1, 1896	97,769,000	7,116,000	65,088,000	169,973,000
Jan. 1, 1895	113,707,000	13,302,000	57,744,000	184,753,000
Jan. 1, 1894	99,542,000	10,721,000	79,960,000	190,223,000
Jan. 1, 1893	*107,057,000	9,305,000	68,336,000	184,698,000
Jan. 1, 1892	69,213,000	8,843,000	78,480,000	156,536,000
Jan. 1, 1891	47,116,000	12,944,000	51,423,000	111,484,000
Jan. 1, 1890	54,227,000	7,565,000	53,299,000	115,092,000
Jan. 1, 1889	52,740,000	5,765,000	72,253,000	130,760,000

Stocks of wheat afloat for and in Europe on the 1st instant amounted to 65,088,000 bushels, a falling off of about 3,500,000 within a month, but a decrease of more than 7,000,000 bushels as compared with the total so held one year ago, and a decrease of nearly 15,000,000 as compared with the quantity afloat for and in Europe on January 1, 1894, nearly 3,300,000 bushels as compared with the quantity so held on January 1, 1893, and almost 13,400,000 bushels as contrasted with the quantity afloat for and in Europe on January 1, 1892.

These data indicate a grand total of available wheat in the United States, Europe and afloat for Europe on January 1 amounting to 169,973,000 bushels, which is nearly 15,000,000 bushels less than the corresponding total one year ago, more than 20,000,000 bushels less than were so held two years ago, nearly 13,000,000 bushels less than three years ago, but nearly 14,000,000 bushels more than were so held on January 1, 1892, 58,000,000 bushels more than on January 1, 1891, and about 55,000,000 bushels more than on January 1, 1890.

In January, 1895, the world's available wheat supplies, as here given, declined more than 3,000,000 bushels. In the corresponding month of 1894 they declined more than 6,000,000 bushels, and in 1893 more than 4,000,000, an average during January of the past three years of about 4,000,000 bushels.

The falling off in available wheat supplies in the United States east of the Rocky mountains in December last was 10,080,000 bushels, against a falling off of only 591,000 bushels in December one year ago, and of 2,945,000 bushels in December two years ago. This will explain the surprise of some of those in the grain trade abroad at the enormous increases in supplies of wheat in this country of late. On the Pacific coast grain stocks, compared with like records in previous years, showed a falling off of 1,160,000 bushels last month, as compared with 1,280,000 bushels in December a year ago. These totals indicate a net increase in available wheat stocks in the United States and Canada, both coasts, during December, 1895, amounting to 8,921,000 bushels, as compared with a net decrease of 689,000 bushels in December, 1894, and an increase of over 3,037,000 bushels in December, 1893. Four years ago, in December, 1892, the increase in available wheat stocks, both coasts of the United States and Canada, was about what it was last month, 8,950,000 bushels.

With these totals it is shown in an accompanying tabular exhibit that the total net increase in available wheat stocks in the United States and Canada, both coasts, for six months ending December 31, 1895, was 44,677,000 bushels, as compared with a total net increase in the latter half of the calendar year 1894 amounting to 53,506,000 bushels, and an increase in the latter half of 1893 amounting to 34,145,000 bushels. In corresponding periods of six months in 1892 and 1891 the increase of available stocks of wheat was much larger than in the three years just mentioned.

With the foregoing exhibit of the somewhat unexpected increase in available wheat supplies last month, at least so far as the United States are concerned, the following comment as to the outlook, from Beerbohm (London), is of interest:

"Buyers in this country, moreover, are looking with some misgiving upon the continued increase in the American 'visible supply,' which much exceeds the expectations formed early in the season, and which leads to the conclusion that once again has the American crop been largely underestimated. The chief seller of wheat this season, however, is Russia, and upon the action of holders in that country much depends. It is quite clear that the last crop has been much less than the previous one, but the latter obviously left so large a surplus of old wheat that Russia can easily spare as much as she exported last season, viz., 17,000,000 quarters. There is, however, as we have frequently pointed out, a prevalent notion among Russian holders that the price of wheat is going to improve, the result being that for some considerable time the level of prices in Rus-

* Decrease. † Increase.

sia has been above that of Western Europe. Stocks in the southern ports have in consequence accumulated, farmers having obtained advances upon their produce to enable them to hold it, if necessary, until next spring. Much, therefore, depends upon whether or no this wheat will be held until the spring. It would appear, indeed, that as European importing countries require the 17,000,000 or 18,000,000 quarters which Russia is credited with having to spare, the question resolves itself into a struggle between the European buyer and the Russian seller. America and La Plata may temporarily fill the gap, but Russian wheat is evidently more indispensable this year than it has been for several years past."

THE NEW YORK STATE BANK REPORT.

The fact that the present superintendent of banking in New York state is about to retire from the post which he has held for the past six years gives more than usual interest to his annual report, which he has just submitted to the legislature. During the period which has elapsed since Mr. Preston took charge of the department the resources of the financial institutions under his supervision have increased by over $281,000,000, the figures in detail, as shown by the last reports, being as follows: Banks of deposit and discount $303,250,533, savings banks $762,511,391, trust companies $395,552,391, safe deposit companies $4,553,068, foreign mortgage companies $27,631,935, and building and loan associations $45,023,732, a total of $1,538,522,894. The examination of financial institutions is considerably more thorough than it was six years ago. Then there were only two regular examiners, and not to exceed three or four assistant examiners. At present there are twenty-five examiners busily engaged, and it is only by strenuous efforts on their part that they are enabled to do the work as it is laid out to be done.

The greatest difficulty at present felt in examining banks is in arriving at the value of the unmatured paper. The process generally pursued in ascertaining the value of the unmatured paper is, first, to thoroughly examine the officers and employees of the bank, the examiner having the power, if he shall deem it necessary, to place the officers and employees upon their oaths, that, together with the expertness of the examiner in detecting frauds from various conditions and suspicious circumstances, furnishing about the only means he has at his command in ascertaining the value of this class of securities. The department, Mr. Preston says, is often unjustly criticised when it sometimes happens that banks become insolvent because of the accumulation of a large amount of uncollectible paper, but which the department is unable to detect from the usual sources of information at its command, and it is difficult, if not impossible, to suggest a mode of procedure which will absolutely remedy this embarrassment. It is often, he says, impossible to get from the officers of a bank the actual condition of their doubtful paper, as it is their desire, of course, to make their bank appear as strong as possible; and while the department may be exercising the utmost skill in the detection of doubtful and worthless paper, yet it is impossible for it to acquire the information in all cases which will enable it to value, to exactness, the promissory notes, which constitute the largest asset of discount banks. It has been the desire of the department to ascertain, with as much exactness as possible, the real value of this class of securities, yet, the superintendent declares, so long as humanity is fallible and prone to err, it is impossible for the banking department to afford absolute and unerring protection in this particular.

Superintendent Preston makes several suggestions looking to the amendment of the laws affecting his department. He suggests an increase in the salary of the superintendent, to date from the appointment of his successor, for the reason that during the last six years the responsibilities placed upon the department, such as, for instance, the supervision of foreign mortgage companies, foreign and domestic building and loan associations, and the authorization of the superintendent to take possession of insolvent banks, in which case he is responsible for the assets of the institution while they remain in his hands, have fully doubled the work and more than doubled the responsibility of the superintendent. He suggests that inasmuch as the action of the legislature in placing foreign mortgage companies and foreign and domestic building and loan associations under the supervision of the department added about 450 institutions to the number to be supervised, and made it necessary to establish an independent bureau for the proper supervision of these associations, and, as it often happens that during the absence of the superintendent from the department the person in charge of the bureau is called upon to act for the superintendent, it would be proper that the banking law be amended to provide for a second deputy, whose duty it should be to take charge and represent the superintendent with reference to the foreign mortgage companies and foreign and domestic building and loan associations, subject to the direction of the superintendent, substantially in the same manner as the first deputy acts with reference to banks, savings banks, trust companies and safe deposit companies, and to fill the position of first deputy in his necessary absences.

Finally, the superintendent directs attention to the fact that section 25 of the banking law, chapter 689, Laws of 1892 and amendments, was amended at the last session of the legislature by adding to the paragraphs then existing several more subdivisions, but in reënacting the section the provision in subdivision 1, relating to the loaning of moneys on collateral, was omitted from the law passed in 1895. It is evident, he says, that this was done by a mistake, as the provisions relating to loaning on collateral were authorized by chapter 696, laws of 1893. The words left out are as follows: "But this restriction shall not apply to loans or discounts secured by collateral security worth 10 per centum more than the amount or amounts loaned thereon, * * * provided, however, that such loans or discounts on such collaterals shall not exceed one-half of the actually paid in capital stock and surplus of such corporations or bankers." The superintendent recommends that these words be restored and that the following be added: "Loans thus secured shall not be computed in arriving at one-fifth part of capital and surplus as applied to any person, company, corporation or firm." The suggestion is also made that directors be relieved from the inhibition relative to loans in the section referred to, for the reason that in many cases the directors are the most valuable patrons of a bank, and that there is no objection to loans to them if kept within proper limits.

HEAVY BANK CLEARINGS IN 1895.

December bank clearings, as was expected, show a considerable gain over the corresponding month one year or two years ago, and furnish a very satisfactory closing chapter to a yearly record of large gains in bank transactions. The total clearings at 60 cities for the month of December aggregate $5,026,056,187, a gain over last year of 17.6

BANK CLEARINGS AT 82 CITIES IN DECEMBER AND FOR TWELVE MONTHS THIS YEAR AND LAST, AND AT 67 CITIES FOR FOUR YEARS.

per cent., and an increase over December two yeas ago of more than 24 per cent. Compared with December three years ago, there is, however, as was to be expected, a decrease of a little over 15 per cent.

The total clearings at sixty cities for the year 1895 aggregate $52,823,539,249, an increase of 16.8 per cent. over 1894, a decrease of a little over 1 per cent. from the panic year 1893, and a decrease of 14 per cent. from 1892, the heaviest on record.

The following table shows the increase for the month of December and the twelve months, together with the gains in other months this year, compared with the gains or losses shown in similar periods of 1894 and 1893:

	1895.	1894.	1893.

December	Inc. 17.6	Inc. 5.9	Dec. 32.4
Year	Inc. 16.8	Dec. 16.1	Dec. 12.9

The showings made by the different groups of states in December and the twelve months' period this year compared with similar figures for September, October and November are as follows:

	Sept.	*Oct.*	*Nov.*	*Dec.*	*Twelve months.*
New Engl'd.	Inc. 16.3	Inc. 18.5	Inc. 14.1	Inc. 9.8	Inc. 14.3
Middle	Inc. 24.8	Inc. 27.8	Inc. 16.3	Inc. 22.7	Inc. 21.4
Western	Inc. 7.5	Inc. 13.2	Inc. 6.4	Inc. 4.0	Inc. 7.8
Northwestern	Inc. 2.2	Inc. 7.9	Inc. 5.3	Inc. 9.4	Inc. 6.8
Southwestern	Inc. 7.3	Inc. 10.3	Inc. 7.0	Inc. 5.1	Inc. 8.9
Southern	Inc. 6.0	Inc. 23.8	Inc. 10.0	Inc. 10.3	Inc. 7.6
Far-western	Inc. 1.5	Inc. 6.5	Inc. 11.8	Inc. 13.4	Inc. 5.5
Totals	Inc. 18.4	Inc. 22.4	Inc. 13.6	Inc. 17.6	Inc. 16.8
Canada	Inc. .6	Inc. .9	Inc. 8.0	Inc. 20.0	Inc. 7.5

The heaviest gains for December, it will be seen, occurred in the middle states, and, of course, are due largely to heavily increased clearings at New York growing out of stock market activity. Other encouraging features, however, are a gain of 13.4 per cent. in the far-west, 10.3 per cent. in the south, and 9.4 per cent. in the northwest. For the year 1895 the middle states group also shows the heaviest gain, 21.4 per cent., and next to this comes the New England group with 14.3 per cent. Increases in the other groups vary from 5.5 per cent. in the far-west group to 8.9 per cent. in the southwest.

AUSTRALIAN FINANCIAL AND MINING MATTERS.

Melbourne, November 21.—The Australasian banking position and the problems connected therewith continue to be of grave interest to the colonies, the more especially as the disastrous effects of the drouth are militating against the improvement in banking which is so much desired. Owing to liquidations and absorptions, there are now only twenty-two banks doing business in the colonies, against thirty banks and a multitude of hybrid financial institutions five years ago; nor is there sound and legitimate business enough to keep the twenty-two banks going on a profitable basis, owing principally to the magnitude of their obligations to depositors and of their commitments in depreciated and unrealizable securities. During the last four years their colonial advances have been reduced by about £30,500,000, and of this sum probably about £20,000,000 has been lost absolutely. While this great contraction has been going on nearly £12,000,000 fresh capital (ordinary and preference) has been obtained, making a total of about £27,000,000, and the banks have increased their holdings of gold from £19,500,000 to £25,000,000. The position, as a whole, is somewhat anomalous, Australasian banking being really in course of transformation. The process is going on naturally, excepting in New Zealand, where the intervention of the government in favor of the Bank of New Zealand, and the absorption by this bank of another institution, have created a peculiar condition of affairs, for although the Bank of New Zealand is a quasi state bank, yet it is still dependent upon public favor for its support, and in trading circles there is a feeling growing against dealing with a bank whose individual accounts are open to government inspection, the members of the government being mostly traders themselves.

The public finances of the several colonies, although not in a flourishing condition, are yet, on the whole, satisfactory. The rise in the English market in all colonial stocks has excited a desire in two or three colonies to resume a borrowing policy, the construction of fresh railways being suggested. But this desire ought to be resisted, for there is no economic justification for any extensive resumption of railway building. The possible wants of many years to come have been fully anticipated. One great blot upon colonial politics is that, in order to placate the labor party and secure their support, governments are inclined to borrow and spend profusely. The real check is to be applied in London, where every application for a fresh colonial loan ought to cause a fall in all colonial stocks. When colonial credit stands high a strong temptation is offered to our sometimes reckless and always uneconomic governments (mostly composed of untrained tyros) to abuse it.

Australian mining in its various forms continues to prosper. The production of gold in almost every colony is increasing, and in Victoria, Queensland and Tasmania, owing to improved processes, the net profits upon the operations are larger than formerly. The Western Australian yield does not yet answer to expectations, averaging at present between 20,000 and 25,000 ounces per month. That there is plenty of gold in Western Australia has been placed beyond all doubt: but the country is almost a rainless desert, and the water difficulty makes mining very expensive, as well as retards settlement. Some millions sterling of British and French money have been invested in Western Australian mining enterprises, but no return has as yet been made, and none appears to be probable for a long time to come. There are only three Western Australian mines in the dividend-paying list. One of these (Bayley's Reward) distributed 4d. per £ share (480,000 shares in all) on December 31, 1894; the second (Great Boulder) paid a dividend of 2s. per £ share (175,000 shares) on October 5 last, and the third (Lake View) paid 6d. per 10s. share (80,000 shares) on 1st instant. Results to shareholders have thus been exceedingly meager, but the colony, with its 70,000 inhabitants, is enjoying the luxury of a boom at the expense of the foreigner.

Silver and lead mining in the Broken Hill district has received great encouragement from the success now attending efforts to treat the enormous quantities of sulphide ores available. Two large companies have been formed for the purpose, and one of these companies (having the right to the Ashworth patents) is largely American, London capitalists (including the Rothschilds) coöperating with New York shareholders. The market in Broken Hill mines has advanced all along the line, although several of them have not yet commenced to pay dividends. The successful treatment of the sulphide ores is likely to add very considerably to the world's annual supplies of lead and zinc. The net addition to the supplies of silver will be insignificant, for, in the first place, the sulphides are not rich in silver, and, in the second place, carbonate ores, which are extremely productive, are being exhausted. From an American point of view, the subject is interesting principally in connection with the future of the lead market.

The Mount Lyell mine in Tasmania is distinctly different from the Broken Hill mines in New South Wales. In the latter case the silver is found with lead, in the former with copper, the vein being described as one of argentiferous copper pyrites, which occasionally yields a little gold. Mount Lyell has recently been visited by two experts, viz., Mr. T. A. Allan, late general manager of the Tharzis mine in Spain, who estimates the quantity of ore in situ at 5,287,702 tons, of which he states than 3,539,687 tons are rich, and Dr. E. D. Peters, Jr., who estimates the profitable ore at 4,600,000 tons, with the following average contents per ton, viz., gold, 2½ dwts.; silver, 3 ounces; copper, 100 pounds. A specially rich patch gave 851,192 ounces of fine silver and 184 tons of copper out of 930 tons of ore. The company owning the mine is at present establishing its plans, setting up machinery, and constructing a short railway to the coast, going to a great expense. When it has perfected its arrangements it will commence paying dividends, say in about twelve months. The par value (largely written up) of its share capital is £900,000, and to-day's market value is about £1,200,000.

Great as has been the reward to mining enterprise in Australia in the past, experts believe that there are greater things ahead, and that Australia will yet assume a much higher position in the world as a producer of gold, silver, lead and copper. When it is remembered that the principal Broken Hill mine (silver and lead) has paid nearly £6,000,000 in dividends, and that the Mount Morgan gold mine has paid about £4,000,000, it is not surprising that the public are impressed by the possibilities of mining in Australia.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 5, 1895, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

Stocks in St. Louis private elevators January 1, 1896, amounted to 972,000 bushels.

CURRENT BUSINESS NEWS.

Industrial.

All of the thirteen locomotive building companies in the United States, except one, says the *Railroad Gazette*, turned out more locomotives in the past than in the previous year, the total number having been 1,109, as against 695 in 1894. The freight cars built in 1895 were 31,803, as compared with 17,029 in 1894.

The Chattanooga *Tradesman* says iron production continues very large. Irregular prices in the central and western iron regions have not influenced the business of the southern furnaces, where large orders remain to be filled, and the market continues to be steady.

A St. Louis press dispatch says a deal in zinc mining in Missouri was to be closed about January 1. It was to unite all domestic zinc smelters, except four, under one management. The money involved is said to be about $2,000,000, which is to be furnished by New York and Connecticut capitalists. The new company will control all the zinc smelters in what is known as the Southwest Missouri district, embracing the zinc-producing territory in Missouri and Kansas. Two smelters in Indiana will come in also.

The Illinois Steel Company has closed its Bessemer and rail mills at South Chicago for a month.

In the copper trade the event of the week has been the sale of about 10,000,000 pounds Calumet & Hecla copper at home at 10c. for delivery during the first quarter.

Spelter has felt stimulated by expectation of a consolidation of the Kansas smelters.

Southern makers of pig iron have decided to meet competition in that quarter, at least.

The Ohio coal operators at Columbus have adopted a resolution agreeing to pay their employees twice a month in cash, but refusing to abolish the company stores.

A St. Louis dispatch says that a combination of the zinc mining interests of that state is about to be effected. The combine will have a capital of about $2,000,000 and will control fourteen plants.

The Baldwin Locomotive Works built during 1895, 401 locomotives, against 313 in 1894. Of the number constructed 162 went to European and South American countries; the balance were for American railroads.

An advance of 10 per cent. in wages has been ordered in the coke regions, affecting 18,000 men. This raises the wages to the highest ever paid in the coke region. The past three months has been the busiest in the history of the coke trade. Out of 17,945 ovens in the region, 16,011 are in operation, and the prospects are that more ovens will be fired.

As the result of a meeting in Chicago recently, every window-glass manufactory in the United States will close down on January 11 and remain closed for four weeks, the object being to curtail the production.

According to a Baltimore dispatch, the three companies which have been operating in the south to introduce cylindrical cotton compress systems have pooled their interests. Each of these companies was capitalized at $1,000,000 or more.

Messrs. Rogers, Brown & Co. write of the Cincinnati iron market that "the inflation of prices on non-Bessemer irons was not excessive, and the reaction is therefore less severe on such producers. Many important transactions will mark the close of the year, as at prices obtainable for early and extended deliveries no serious loss is possible and large gains in value are altogether probable."

Commercial.

At the New York Cotton Exchange there has been a boom in price and volume of speculation. Total transactions of the year are nearly double those of last year, 63,823,300 bales against 33,598,000 bales in 1894 and 47,724,500 bales in 1893. Cash business was smaller, being 240,456 bales against 260,834 in 1894. The opening price of middling uplands was 5 11/16c.; the lowest reached 5 9/16c.; the highest 9¾c., and the closing 8⅜c.

At the speculative exchanges at New York city only one article, coffee, reports a falling off in the volume of business. The sales of that have aggregated 3,055,250 bags on the Coffee Exchange, as compared with 4,618,750 in 1894.

At the New York Produce Exchange, in 1895, of wheat flour 5,556,400 barrels were sold, against 5,001,000 last year and 5,501,000 in 1893. Wheat touched its lowest price, 55c., in February, and its highest price, 84c., in June. It closed at 69½c. Corn closed 17c. lower than at the opening of the year.

Total sales of listed and unlisted stocks on the New York Stock Exchange amounted to 66,593,576 shares, against 49,275,736 in 1894, 77,984,965 in 1893 and 86,726,410 in 1892. The sales of listed and unlisted bonds amounted to $512,095,850, against $352,741,950 in 1894. Heaviest stock and bond transactions were last May.

Option sales of wheat at the New York Produce Exchange aggregated 1,665,232,000 bushels, against 1,251,706,000 in 1894 and 1,052,465,000 in 1893. The heaviest sales were in May, when transactions were 331,387,000, and the smallest sales were during December, the total being 58,552,000 bushels.

The New York Custom House reports imports of a value of $519,229,913, on which the duties were $112,777,880, for 1895. In 1894 the imports were $436,021,173, on which $88,231,102 duties were paid.

Business at the New York Sub-Treasury was larger in 1895, total receipts and payments being $2,519,975,307, against $2,349,209,665 in 1894. Receipts for customs were $115,404,373, against $91,466,598 in 1894. The amount of gold withdrawn was $124,395,388 against $116,560,903.

Total option dealings in Indian corn at the New York Produce Exchange amounted to 147,785,000 bushels in 1895, against 132,410,000 in 1894 and 177,543,000 in 1893.

A San Francisco dispatch says that a representative in this country of a Japanese manufacturing syndicate has bought 50,000 bales of cotton, which are to be shipped to Yokohama during the present season.

The Plant Steamship Company has arranged for a semi-monthly line of steamers between Port Tampa, Fla., and Jamaica, beginning on January 19.

The *American Wool and Cotton Reporter* says: "Sales of wool in the three principal markets of the country in the last week of 1895 have amounted to 12,213,000 pounds, nearly 7,500,000 of which were domestic stock of every known description. This wool has been sold on the average at prices 5 per cent. in advance of the usual pre-Christmas selling rates, and at least four-fifths of it has gone into consumption."

The Boston *Herald* "finds that the retail Christmas trade this year has been great beyond precedent, testing to the utmost the capacity of the Boston merchants to provide for it."

New York city agents of transatlantic lines report the outward movement of freight during December heavier than that of the corresponding month of 1894, while freight rates were only slightly lower than they were at that time.

A bulletin from the Manitoba Department of Agriculture says: "The immense wheat crop has enabled farmers to sell as much as was sold at this date last year, enabling them to pay off pressing liabilities, while still holding the greater part of the crop. Correspondents report the general inclination on the part of farmers to hold what they can for anticipated higher prices."

The Memphis Cotton Exchange recommends to cotton producers that the production of home supplies be made the first consideration in planting operations for the coming year, and the acreage of cotton be not increased over that of last year. It indorses the American Cotton Growers' Association for bringing about the reduction in the acreage of the crop now being marketed, and urges the presidents of various state cotton-growing associations to take up the matter at the earliest practicable moment and urge it again upon the attention of the cotton producers of the south. The various cotton exchanges and newspapers throughout the south are requested to coöperate in this matter.

Financial.

The following securities were sold at auction this week at New York:

$11,000 Atlanta & Charlotte Air Line, income 6 per cent. bonds, due 1900, $500 each	91⅝
25 Shares National Butchers' & Drovers' Bank, $25 each	145⅝
10 Shares Laclede Gas Light Co. of St. Louis pfd.	78
14 Shares Broadway Insurance Company	113¼
$1,500 Fidelity Loan & Trust Company of Sioux City, Iowa, 6 per cents	$675
$3,000 Washington Water Power Company of Spokane 1st 6 per cents	70
$2,000 Spokane Cable Railway Co. 1st 6 per cents	60
$3,000 Edison Electric Illuminating Company of Spokane Falls 1st 6 per cents	70
$1,000 Spokane Electric Railway Co. 1st 6 per cents.	60
2 Shares Washington Water Power Company of Spokane Falls	11
26 Shares Phenix National Bank	105
$10,000 Sloss Iron & Steel Company 4½ per cents	56

A Fall River, Mass., telegram states that "the Bourne Mills have paid the thirteenth semi-annual dividend to their employees, who participate in the profit-sharing plan adopted nearly seven years ago, and this dividend is larger than ever before. Each employee who subscribed to the agreement six months ago has received 7 per cent. on the amount of wages earned from June 10 to December 7, 1895. A vote was taken in regard to a continuance of the system, and it has been decided to go on with it for another six months at least."

The New York Clearing House Association will begin business in its new building as now arranged on Monday, January 20. On Saturday, January 18, the last clearings will be made in the present building at Pine and Nassau streets, and on the following Monday morning work will be begun in Cedar street.

The directors of the North Chicago Street Railway Company on Saturday declared an extra dividend of 20 per cent. upon the $5,500,000 capital stock of the company. Ten per cent. of this, or $550,000, will be given as a stock bonus and 10 per cent. in 6 per cent. debentures of the company.

The Secretary of the Treasury gave notice, December 28, "that the United States 6 per cent. bonds of the face value of $4,320,000, issued under the acts of July 1, 1862, and July 2, 1864, to the Union Pacific Railroad Company and commonly known as 'currency sixes,' become due and will be paid with interest at the Treasury Department on February 1, 1896, and that interest on the bonds will cease on that day."

Advance figures of the *Railway Age*, of Chicago, show that the railway foreclosure sales in 1895 far eclipsed those of any other year in respect to mileage and capital involved. During the year 53 roads were sold, aggregating 13,129 miles of lines, and representing $333,716,000 of bonded debt and $442,060,000 of capital stock, making a total of $775,776,000 of bonds and stock. In respect to the railway insolvencies the record for 1895 is more favorable than for the three preceding years. Receivers were appointed for 31 roads, with 4,019 miles of lines, involving $222,211,000 of bonds and $147,858,000 of capital stock, or a total of $369,075,000.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 75,881 tons, against 90,577 tons the previous week, and 30,787 tons the correspouding week of the previous year.

Miscellaneous.

At the American Economic Association and the Political Science Association of the Central States, Indianapolis, last week, a paper was read by Professor Irving Fisher, of Yale University, on "The Relation of Changes in the Volume of the Currency Prosperity." The paper was directed against the argument that the appreciation of gold aggravates debts. "The Belmont-Morgan bond syndicate," said Professor Fisher, "was willing to lend our government some sixty-five millions at 3 per cent. if a gold standard were specified, but demanded 3¾ per cent. if they had to assume the risks of a fall of standard." An elaborate algebraic example was produced by the professor to illustrate his argument. Other papers were read and speeches made by President Francis A. Walker of the Massachusetts Institute of Technology, and Professors William Fisher and E. A. Ross. Professor F. W. Taussig, of Harvard, and Professor H. W. Farnham, of New Haven, read papers at the afternoon session, the former on the "International Use of Gold and Silver," and the latter on "The Practicability and Desirability for the Commercial World of a Double Standard of Currency."

The chairman of the finance committee of the Atlanta Exposition says that when the debts are paid the enterprise will have cost Atlanta about $200,000, or less than 10 per cent. of the money expended on the fair. This includes the original stock subscription and the appropriation of the city, which is regarded as satisfactory. "It is estimated that the immediate benefit to Atlanta in money expended here by exposition visitors amounts to $5,000,000, and that the ultimate benefits to the city and cotton states are immeasurable."

At a meeting of the New York Chamber of Commerce on January 2 the following resolution was adopted: "*Resolved*, That the Chamber of Commerce of the State of New York, being profoundly impressed with the gravity of the situation which threatens the peace now and happily so long existing between Great Britain and the United States, appeals to the common sense and the common interests of the people of both countries to avert the calamity of war by a resort to arbitration, or other friendly negotiation, which has so often been found to be a sufficient and satisfactory mode of settling international disputes, and to which both governments stand committed by profession, precedent, and the humanitarian spirit of the age." The chamber also adopted a resolution looking to the appointment of a special committee to secure the appointment of a joint advisory council of British subjects and American citizens to investigate and report to the two governments in the interests of peace.

It is said that Congress will be given another opportunity to purchase the islands of St. Thomas, Santa Cruz and St. John this winter. Denmark is prepared to sell them, and at the next session of the Danish storthing a direct proposition will probably be made to the United States to purchase.

An important order for the expedition of the mails across the Mexican border has been issued by Assistant Postmaster-General Nielson, providing for the first exchange of the mails of railway post offices of the United States and Mexico. This does away with the stopping of the mails at the post offices of both countries along the line, and effects a saving of twenty-four hours and more in some instances. The mail allowed to pass without interference, however, is restricted to unregistered letters, postal cards and periodical publications, and all postage is required to be prepaid in full. A similar plan has been in operation between this country and Canada practically since the establishment of the railway mail service.

Foreign.

Dornbusch's *List* (London) says: "In the event of possible, but, happily, highly improbable developments, the reserves in the Russian ports would be to some extent reassuring, and the Danubian provinces can spare considerable quantities. Naturally higher prices would be necessary to attract supplies, but a rise of even 5s. per quarter would prove a wonderful magnet in drawing supplies from sources which are now barred by low prices, and the contents of the pit granaries of India would see daylight on their way to the seaboard for shipment."

The coming Hungarian Millennium Exhibition at Budapest will be opened by the Emperor-King, May 2, 1896, and "is likely to attract the world to the thriving Danubian emporium of the Magyars. Royalty in multitude promises to honor the millennium festivities with their presence."

Antwerp is becoming a rival of London for the ivory trade of the world. A report from the British consul-general at Antwerp shows the large extent to which ivory is brought to Belgium from the Congo. Although the ivory industry has of late sprung into new life at Antwerp, it is of considerable antiquity.

A Valparaiso dispatch says: "There is great rejoicing here in all parties over the prospects of lasting peace in South America as the new year opens. The trouble between this republic and Argentina is practically at an end, and the ratification of the treaty between Chili and Bolivia by the Senate of the latter country promises the most brilliant results."

The London *Financial News* (daily) says: "Perhaps one of the most hopeful features in the American outlook is the reduction in the liabilities of the United States to Europe for dividends and interest. Of course, all calculations as to the aggregate of such remittances are necessarily based largely on guesswork; but, considering how many former dividend-payers are in default, and how greatly European holdings of American securities have been diminished of late years, it is not difficult to accept the estimate of an official of the Washington Treasury that the January payments will be only $50,000,000, against $75,000,000 at the same date this year. When Americans were popular here the January interest and dividend remittances to Europe amounted to $150,000,000."

The leading banks of Europe according to recent reports stand as follows:

Bank of	Metallic reserve—Gold.	Metallic reserve—Silver.	Bills in circulation.
Germany	$228,620,000	...	$320,700,000
Austria	91,900,000	$54,760,000	240,420,000
Belgium	21,260,000	...	86,520,000
Denmark	15,860,000	....	22,400,000
Spain	40,020,000	58,980,000	192,380,000
Finland	4,360,000	640,000	10,580,000
France	404,700,000	250,160,000	672,700,000
Italy	59,800,000	10,140,000	153,380,000
Holland	21,540,000	34,320,000	88,400,000

Russia	388,600,000	5,340,000	877,300,000
Swiss	16,420,000	1,920,000	35,920,000
Turkey	9,780,000	....	4,940,000
Canada banks	7,575,000	....	32,774,000
U. S. national banks	162,925,000	33,312,000	212,829,000

According to recent advices a Japanese, named Ito Chuzo, has made an invention which promises to be of immense value to silk culture. It is an improved method of killing the worm in the cocoon, so that the latter can be stored without fear of deteriorating, and silk reeled after any length of time. The system at present employed involves a loss of about 30 per cent. in cocoons, and it is estimated that if the invention were adopted throughout Japan, the silk industry of the country would be benefited to the extent of 10,000,000 yen annually.

A Berlin dispatch says Russia is negotiating for the creation of a branch of the Banque Imperiale Russe in New York.

The discovery and operation of great petroleum fields in Austria-Hungary has been reported to the State Department by George H. Murphy, United States commercial agent at Luxemburg.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Partnership—Good Will.

The English House of Lords, sitting as a court of appeal, has lately rendered a decision in the case of Trego vs. Hunt, holding that an outgoing partner in a concern, where the good will remains in the continuing partner, has no legal right to take copies of the names and addresses of the customers of the partnership with the object of soliciting such persons and obtaining their custom for himself when he starts on his own account, at the end of the term.

Interstate Commerce—Sale of Goods.

The Supreme Court of Indiana held, in the recent case of The City of Huntington vs. Mahan, that where goods prior to their sale had come into the state and become permanently fixed and mingled with the mass of property within the state, and subject to sale by present exposition and delivery, such sale was not a transaction of interstate commerce; that in case of the soliciting of orders and the subsequent shipment and delivery of goods from a foreign state, which have not come into the state and mingled with the mass of property within the state, such transaction is governed by the interstate commerce law, and that the right to deliver goods sold when not within the state has the same immunity from state or municipal interference by way of taxation as the sale itself has.

Carrier—Loss—Measure of Damage.

The Supreme Court of Minnesota held, in the recent case of Shea et al. vs. Minneapolis, St. Paul & Sault Ste. Marie Railway Company, that if the acceptance of goods for transportation by a common carrier be special, the burden of proof, in case of loss, is upon him to show not only that the cause of the loss was within the terms of the exception, but also that there was on his part no negligence or want of due care; that where property has been delivered by a common carrier to a consignee the presumption is that the latter has paid the carrier's charges, and that a condition in a bill of lading which provides that the amount of loss or damage incurred by a carrier is to be computed at the value of the property at the time and place of shipment, and wholly fails to provide for restitution of the amount which may have been paid by the consignee as freight charges, is unjust, unreasonable and against public policy.

Partnership—Stock—Mistake.

The Kentucky Court of Appeals held, in the recent case of Wolf vs. Levi et al., that under a partnership agreement between the appellees and appellant, the appellees, who had theretofore been in the same business, having put in as a part of the capital their stock of goods, and there being a clerical mistake in the summing up of the invoice by reason of which they received credit for several thousand dollars less than they were entitled to, the court, in an action for a settlement of the partnership, properly corrected the mistake and gave them the additional credit to which they were entitled, properly refusing to allow appellant to question the invoice prices, as he should, if he had any objection, have made it at the time of the invoice, and that as it appeared that pending the litigation, and before the proceeds of the stock of goods sold under order of the court had been collected, there fell due debts of the firm amounting to a large sum, prompt payment of which was necessary to preserve the credit of the firm and of the members thereof, and that as in that emergency appellees borrowed on their own credit the necessary amount and paid these debts, the interest they had to pay was properly allowed as credit in the present settlement.

Note—Surety—Consideration.

The Supreme Court of Georgia held, in the recent case of Graham vs. Marks et al., that, as a general rule, a promissory note executed under the duress of the principal by imprisonment is not void as to a surety thereon, if the latter, being under no duress and knowing of the duress of the principal, nevertheless voluntarily signed the note, and though knowledge of the fact of the principal's imprisonment did not necessarily involve knowledge on the part of the surety of its want of legality, a plea by the latter alleging that the principal signed under such duress, even if in other respects good, ought to allege that the imprisonment was illegal or, if legal, was used for an illegal purpose, and that the surety was ignorant as to its real character, and, therefore, ignorant of the duress; that a surety upon a promissory note cannot be legally defrauded by a promise made by another to have the principal appointed to a public office, even though such promise was made for the purpose of inducing the surety to sign; that a promise of this kind being contrary to the policy of the law could not be enforced, and therefore could not, in legal contemplation, mislead the person to whom it was made, and that a plea attempting to allege that a promissory note was given, in whole or in part, for the purpose of settling a threatened prosecution for a criminal offense, is not legally complete unless it alleges facts showing that the person to be prosecuted was charged with having committed an act or acts constituting a crime or misdemeanor.

Bank—Cashier's Authority—Overdrafts.

The Kentucky Court of Appeals held, in the recent case of Pryse et al. vs. Farmers' Bank of Beattyville's Assignee, that what is or is not within the scope of the authority of the cashier of a bank is, at least ordinarily, a matter of law, and the question should not be submitted to a jury; that the cashier's authority generally does not embrace the business of discoun ing paper, which is a matter for the directory; that where the president of a bank had authority to ask for the board of directors in the matter of discounting paper the cashier was not negligent in acting upon his judgment in the acceptance of paper, in the absence of fraud or collusion, or any notice that the paper was unsafe, and the jury should have been so told in an action upon the cashier's bond; that where a number of the directors of a bank lived a great distance from the town where the bank was located and no meetings were held to give directions or advice to the cashier, that officer being left to conduct the business of the bank as best he might, with an occasional suggestion from the president, he had power to permit overdrafts, provided he acted with proper care in doing so, and if he were held liable for loss resulting from such overdrafts, it must be by reason of failure (1) to make reasonable inquiry into the financial standing of those making the overdrafts, and (2) to exercise such discretion as an ordinarily discreet and prudent man would exercise in the management of his own business of a like nature; that in order to give validity to the cashier's bond it is not necessary that a memorandum of acceptance should be shown by the minutes of the board; that it is competent to prove the facts connected with the execution and delivery of the bond and its consideration and retention by the directory, and from these facts, in connection with the induction of the cashier into the office, an acceptance might be presumed; and that testimony relating to the cashier's unpaid note for subscriptions to the capital stock of the bank, as well as that relating to his alleged compromise of a claim of the bank, was not relevant to the causes of action set up in the petition, and should not have been admitted.

Note—Payment—Interest.

The Supreme Court of Georgia held, in the recent case of Ray vs. Pease, that where the principal of a promissory note is payable at the end of a given term of years, but the note stipulates for the payment annually of the interest accruing thereon, an installment of interest past due may be sued for and collected before the note, as to principal, has matured; that where promissory notes, executed before the passage of the act of July 22, 1891 (acts of 1890-91, p. 221) and containing stipulations for the payment of "all cost of collection, including attorney's fees," were placed in the hands of an attorney at law for collection, who brought an action thereon in the name of the owner, the plaintiff was entitled to recover reasonable attorney's fees, although in his contract with the attorney it was alleged that the latter should receive no compensation for his services other than what might be recovered from the defendant; that the maker of such promissory notes was liable for such reasonable attorney's fees as may have been incurred by the owner thereof in defending equitable petitions sued out by the maker to restrain their collection, it appearing that such petitions were without merit, and resulted only in delaying the owner in the enforcement of his legal right to collect the notes, and that the consideration of the notes being the purchase price of land held under a bond for titles from the seller, to which the latter as matter of law had a good legal title, the fact that the defendant, erroneously conceiving there was a defect in that title, had instituted an equitable proceeding to have the question of title adjudicated and settled, and had brought that proceeding to the court, which rendered a decision holding that the title was good, gave the defendant in the action upon the notes no right to recoup against the purchaser in that action the expenses incurred by such defendant in the litigation growing out of the proceeding just mentioned.

BUSINESS NOTES.

Utah Statistics.

Utah has an area of 84,970 square miles, or nearly twice that of Pennsylvania. Its extreme length is 345 miles, and its breadth 275 miles. Its surface is greatly diversified, much of it being mountainous. The valleys of the state, where water is plenty, have proved very productive, and the plain country where irrigation is possible will in time be valuable as agricultural land. The population is estimated at 252,000. Salt Lake City has attracted much capital in the last few years. Its population is now estimated to be nearly 60,000.

Coffee Crop of Colombia.

The *Shipping List* says: "In a dispatch from Barranquilla United States Consul Bidlake says: 'Colombia has this year an immense crop of coffee, and of good quality. In the department of Tolima the crop is the largest ever grown, and of superior grade. Santander has also a fine crop, but not of as good a quality. In the warehouses at Giradot there are 40,000 sacks of coffee, and at Yeguas 14,000 sacks awaiting shipment to the coast. It is estimated that there are yet 200,000 sacks of coffee for exportation. Exchange is falling rapidly, and bills are being sold at 150 per cent. for dollars.'"

British Chinese Railway Connection.

The Leeds Chamber of Commerce has sent to Lord Salisbury a resolution with reference to railway communication with Southwest China, which was passed on October 16, and forwarded then to the India Office. The chamber feel the strong necessity for the construction of a railway from Rangoon or Moulmein to Szumao, either partly through Siamese or wholly through British territory. The chamber consider that such action is necessary in regard to the efforts of France to acquire the trade and shut the English out of the markets of Southern, Central and Southwestern China.

Leadville Mining Output in 1895.

The *Engineering and Mining Journal* says: "Our special correspondent telegraphs us that the value of the product of the Leadville mines for 1895 will be $8,522,082, which is a slight increase over last year, and brings the production of the camp from 1879 to date to $204,000,000. The gold, silver and lead produced during the past year gives the following value: Gold, $1,337,500; silver, $5,079,840; lead, $1,705,027. The balance of the valuation is zinc and copper. The tonnage of the camp for the year is 330,933 tons, divided as follows: Lead carbonate ore, 70,429; iron ore for fluxing, 86,243; sulphide ore, 116,975; silicious ore, 57,286. The output of Leadville's great gold property, the Little Johnnie, is given by the management as 47,360 tons of silicious ore."

Railway Car Building in 1895.

The *Railroad Gazette* says: "Reports from the car building companies show that car building also has taken an upward turn, the output of the contracting shops being 31,893 freight cars. This is in comparison with 17,029 freight cars built in 1894. When we say that car building has taken an upward turn, we limit the phrase to a comparison with the previous year. The total of cars built this year is not a large record by any means, and makes the number built in the years immediately preceding (51,000 in 1893 and 93,000 in 1892) appear extraordinarily large. It seems probable that railroad managers have continued the use of much equipment not in good condition, and which ordinarily would be replaced. In this fact lies the hope of the car builders."

A National University.

Another bill to establish a national university at Washington has been introduced in both the Senate and the House. It provides for a university of the highest type, vests the government of the university in a board of sixteen regents, with the President of the United States at its head, and a university council, embracing said board and twelve eminent educators, representing as many institutions of high rank and belonging to as many states, the regents to have charge of all business affairs, the council of all else. It further authorizes the university to establish coöperative relations with other institutions of the country, prohibits partisan and sectarian preferences in any form, makes admission depend on competency only, and so guards the degrees to be granted as to protect the interests of all collegiate institutions entitled to recognition. In consideration of the financial condition of the country, it appropriates for the fiscal years of 1897 and 1898 barely enough to enable the board of regents to organize and do such preliminary work as should not longer be delayed, at the same time opening the door to all such as may desire, in imitation of George Washington, to contribute in any way to the great enterprise originated by him.

Short Crop of Cereals.

Official calculations made in Russia and transmitted to the State Department by United States Consul-General Karel, at St. Petersburg, "show that the present year's harvest of cereals in the whole world is much smaller than last year's, and compared with 1894 the decrease is in wheat 150,467,000 bushels and rye 128,971,000 bushels. Other grains turned out better. In Russia the harvest was short 55,371,733 bushels of wheat and 88,345,428 bushels of rye. The Russian financial organ, therefore, commends the policy adopted by Russian dealers of holding back their grains to obtain better prices later on. The official estimates for next year place the amount of wheat required to be imported at 513,923,715 bushels and the rye at 91,133,791 bushels, of which Russia will be expected to supply 121,853,925 bushels of wheat and 57,527,706 bushels of rye. She will be able to export 131,563,860 bushels of wheat and 59,529,342 bushels of rye."

American Meats and French Peas.

The *National Provisioner* says: "The French Chamber of Deputies last week, during a discussion of the military budget, decided that, except under unusual circumstances, no more tinned meats are to be supplied to the French army after January 1, 1897, except such as are manufactured in France, or in the French colonies. We presume that this is done with a view to conciliate the agrarian party in that country. If the dietary of the French army includes 'green peas,' it would be interesting to know if they are of the same quality which are shipped to this country. The Department of Agriculture has been sampling some of these, and has issued a report thereon. The report shows that the French canned peas generally sold are not wholesome eating, as they contain copper, oxide, tin and lead. The department, we understand, will fully examine and report on the character of all food products received from Germany and France, and after a short while it may be decided to shut off these imports, on the justifiable ground that they are a menace to the public health."

Vineyards of Palestine.

The *Journal de la Chambre de Commerce de Constantinople* says that the cultivation of the vine in Palestine has largely increased of recent years. The German settlements established in the country, and certain religious bodies, set an example, which has since been followed by the natives of the place. Hills and valleys, once uncultivated, have been transformed into vineyards, producing both white and red wines, which are much appreciated. The grape is generally white, large, sweet and agreeable to the taste. Large quantities are consumed on the spot. The sandy soils of Jaffa and Gaza are peculiarly adapted to this cultivation. Hebron, and its neighborhood, Jerusalem, Bethlehem and St. John include about 1,300 hectares (about 3,200 acres) of vineyards. Different kinds of brandy, consumed in the country, are also made, the mountain grape, full of alcohol, being peculiarly suited to this particular manufacture. A special brandy of the country is made at Bethlehem; its quality leaves much to be desired, on account of the careless and defective method of preparation.

Preservation of the Palisades.

The joint New York and New Jersey commission, who have been working to secure the Palisades from destruction, have agreed, says the *Engineering News*, "upon bills which are to be presented to Congress and to their respective state legislatures. The proposition is to establish a national military park similar to the ones at Chickamauga and Gettysburg, with a parade and camping grounds, besides the usual features of a park. The exact boundaries are to be determined by a commission to be appointed by the Secretary of War, and an appropriation of $500,000 is asked to enable them to proceed with the engineering work and required condemnation of land. The proposed boundaries include the whole length of the Palisades, varying in width from a few hundred yards to three-quarters of a mile at the upper end, where there is an almost unbroken forest. High-water line of the Hudson river is proposed as the eastern boundary of the park, with all riparian rights included in the reservation. The present commission is composed of Henry D. Winton, Edward P. Meany and Charles B. Thurston, of New Jersey, and Enoch C. Bell, Waldo G. Morse and J. J. R. Croes, of New York.

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The week which ended 1895 and ushered in 1896 has been very dull in mercantile circles, as is usual at this period. The volume of business has fallen away sharply, owing to the new year's holiday and to quiet in trade circles at a time when stock-taking and preparing samples for commercial travelers are taking the attention of jobbers and commission houses.

A slackening of activity in some of the important manufacturing lines is likewise noticeable, and it is significant that telegrams from so many centers report mercantile collections slow or unsatisfactory, the exception being at a few points in southern states. Jobbers in leading lines at many centers are confident as to the outlook for trade in the near future, although in instances fears are expressed of an unfavorable effect, due to inability to secure necessary legislation on financial questions.

Advices from St. Louis are that total business last year was the largest since 1892, and that total clearings there in 1895 were the largest on record. The volume of Chicago's jobbing trade last year was 10 per cent. larger than in the year before, and the manufacturing output from 10 to 15 per cent. larger. Another gratifying report is from Chattanooga, that country merchants in the region tributary to that city are on a firmer financial basis than in previous years.

On the Pacific coast the lumber trade is vieing with that in wheat, shipments of lumber from Portland, Ore., to Mexico, Central America and South America having been heavy, and from Tacoma are in excess of all previous records. General trade at Seattle last year was from 5 to 25 per cent. larger than in 1894. San Francisco telegraphs that flour has advanced 14c., that the orange crop has been unfavorably affected by frost, and that farmers are anxious for rain.

Stock values at New York were favorably affected by expectation of a $100,000,000 4 per cent. government bond issue, and the probable oversubscription of a syndicate to take the bonds. Speculation is, however, very dull, and waiting for the formal announcement of the arrangement. Activity is confined to small traders and has no significance. The exchange market is firm at 4.89¼ for demand, and $1,500,000 gold has been taken for export. At the same time $2,000,000 or more gold is being shipped from London to New York on special orders for use in the bond subscription. A premium of 1@1¼ per cent. is paid for gold not taken from the Treasury.

December bank clearings are the largest for any month last year but one, October, 1895, and furnish a satisfactory closing chapter to a year of large gains in bank clearings. Total clearings at 60 cities for December aggregate $5,026,056,187, a gain over December last year of 17.6 per cent., and an increase over December two years ago of 24 per cent., while compared with December three years ago there is a decrease of 15 per cent. Heaviest gains occur in the middle and in New England states, due partially to speculative activity. Total clearings at 60 cities for 1895 aggregate $52,823,539,249, an increase of 16.8 per cent. over 1894, a decrease of only 1 per cent. from the total in 1893, and a falling off of 14 per cent. from 1892, the record year in bank clearings.

The prices movement has taken a start upward, and for the first time in many weeks a large majority of staples quoted close higher than one week ago. The more important cereals—flour, wheat, corn and oats—are all up, as is pork and sugar, both raw and refined, petroleum, both crude and refined, cotton, wool (the latter from ½c. to 1c.), and lastly hides, the latter having stiffened the leather market. Quotations for lumber and for coal remain firm at the levels of the preceding week, as do cotton goods, notably print cloths, the increased price of which has not enjoyed relatively the advance shown by cotton. In addition to a decline in the price of coffee, pig iron and steel are off 25@50c. per ton, with quotations still in the buyer's favor. The prospect does not favor a relief from the existing weakness in the iron market, as production is ahead of all records, with an output of about 1,000,000 tons per month, and stocks are accumulating. Some furnaces may have to shut down soon to relieve the pressure.

World's available wheat stocks, January 1, are less bullish than anticipated, amounting to nearly 170,000,000 bushels, about 15,000,000 bushels less than one year ago, 20,000,000 bushels less than two years ago, and 25,000,000 bushels less than three years ago, but more than were held at corresponding dates in years previous to 1893. Stocks of wheat east of the Rocky mountains, United States and Canada, increased more rapidly in December than expected, while on the Pacific coast the usual falling away took place. While stocks of wheat afloat for and in Europe on the 1st instant are a few million bushels smaller than a month ago, they are more than 7,000,000 bushels larger than one year ago, although less than were reported January 1 in the three years next preceding 1895.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,965,731 bushels, compared with 3,142,000 bushels in the corresponding week last year, 3,196,000 bushels in the week two years ago, 3,008,000 bushels three years ago, and as contrasted with 5,321,000 bushels in the week four years ago. One week ago the total exports amounted to 3,457,000 bushels. Foreign shipments of wheat this week, therefore, are larger than those for any previous week since that ending September 19, 1893. Exports of Indian corn this week, which amount to 3,227,000 bushels, are exceptionally heavy, being larger than those for any previous week since that ending February 21, 1892.

As is usual at this season, there is a considerable increase in the number of business failures in the United States, the total reported being 403 this week, against 316 last week, 373 in the week one year ago, 480 two years ago, and as compared with 313 in the week three years ago.

Mild weather and the usual Christmas holiday interruptions have rendered general trade throughout the Canadian Dominion as dull as at corresponding periods in preceding years. Toronto advices are that business is quiet, although prices are firm, collections being fair only. Trade in the region tributary to Montreal has been checked by lack of snow and bad country roadways. Dullness is the rule in the maritime provinces. Lack of snow and mild weather have interfered with the lumber interests in New Brunswick. There are 38 business failures reported throughout the Dominion of Canada this week, compared with 30 one week ago, 33 one year ago and 36 two years ago. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax for the calendar year 1895 amount to $987,254,000, as compared with $918,954,000 in 1894, with $976,163,000 in 1893, and with $1,013,530,000 in 1892.

FINANCIAL.

The Money Market.

A good deal of pressure was expected in the New York loan market this week. The effects of the recent disturbance of values has not passed away entirely, and preparations for the expected bond issue, combined with the January disbursements and shifting around of balances, unsettle the market. That the financial and business community was prepared for stringency in money on Monday and Tuesday tended to minimize the disturbance, and no necessity arose for the taking out of loan certificates by any banks at the Clearing House. The fact that a premium of 1 per cent. about is paid for gold not withdrawn from the Sub-Treasury is explained by the terms of the proposed syndicate organized by J. P. Morgan & Co. to secure the contemplated issue of $100,000,000 government bonds, and, as elsewhere noted, some amounts of gold are being brought from Europe at a loss about equal to the premium in connection with the same operation. Call loans were very firm on Monday and Tuesday, the bulk of the business on the Stock Exchange being done at 10@25 per cent., but on each day, after all requirements had been filled, the rate fell to 6 per cent. or less. On Thursday call money was 6@10 per cent., and touched 4 per cent., and on Friday the extremes were 2@7 per cent. Time money is not offered in any amount, and 6 per cent. is the ruling rate. Mercantile paper is also on the basis of 6 per cent. for best names, with only an occasional buying demand.

The New York Banks.

Last Saturday's bank averages reflect the financial disturbance of Christmas week and the week before. The calling in of credits displays its effect in the decrease of $11,180,100 in loans, and, with the reduction of $4,157,200 in legal tenders, accounts for the reduction of $16,201,500 in deposits. The actual loss of cash to the banks was over $5,000,000, of which $2,774,000 was due to the operations of the Sub-Treasury. This, taking into account the decrease of $742,300 in the specie holdings, agrees with the shrinkage of $5,199,500 in the total cash reserve. The result of the other changes is a decrease of $1,149,125 in surplus reserve, the figures of the statement comparing as follows with those of the preceding week:

	Dec. 28.	Dec. 21.	Changes.
Loans	$478,466,500	$489,646,600	Dec. $11,180,100
Specie	67,114,200	67,856,500	Dec. 742,300
Legal tenders	74,097,800	78,555,000	Dec. 4,457,200
Deposits	501,089,300	517,290,80[illegible]	Dec. 16,201,[illegible]
Circulation	13,926,700	13,9[illegible]	[illegible]
Total reserve	141,212,000	146,411,500	Dec. 5,199,500
Reserve required	125,272,325	129,322,700	Dec. 4,050,375
Surplus reserve	15,939,675	17,088,800	Dec. 1,149,125

At the corresponding date in 1894 the surplus was $35,268,850, against $80,815,150 in 1893.

The Boston Banks.

	Dec. 30, '95.	Dec. 23, '95.	Changes.
Loans	$169,48[illegible],000	$170,323,000	Dec. $843,000
Circulation	8,949,000	8,889,000	Inc. 60,000
Deposits	109,516,000	111,886,000	Dec. 2,344,000
Due from reserve agts	16,214,000	19,992,000	Dec. 3,778,000
Legal tenders	5,438,000	5,884,000	Dec. 446,000
Specie	11,315,000	11,689,000	Dec. 374,000

Silver.

The silver market has been firm in tone at a slight advance. The quotations for bars in London rose from 30½d. to 30 9/16d., but receded to its orig-

inal level. New York followed London with an advance to 66¾c. per ounce, and declined again to 66¼.

Foreign Exchange.

While rates for exchange have returned to a normal level, this week has been marked by a very unsettled feeling in exchange circles. The actual supply of bills is limited, and there is a fair demand for remittances from mercantile sources, supplemented by the inquiry usual at this period growing out of collections of coupons and other interest. Posted rates were 4.88½ @4.90½ at the opening of the week, but the figures for sight sterling were reduced on Tuesday by ½c., making the rates 4.88½ @4.90. This change corresponded with the decline in actual business for demand sterling, which went down from 4.89 to 4.88¾ @4.89, in consequence of more liberal offerings by bankers, and the check which the higher rates prevalent in the money market put upon borrowing by importers and other mercantile interests. On Thursday this latter obstacle was less influential and a very firm tone was displayed, the sight sterling rate rising to 4.89@4.89¼, the market being firm at this level on Friday.

At the figures which prevailed gold could be shipped. Bankers, however, were averse to doing so, not only on account of the difficulty in obtaining legal tenders on which to draw gold, but for causes connected with the expected announcement of a government bond issue. Many houses are to take part in the proposed syndicate operation in the bonds, and all are influenced by the demand that has not been drawn from the Treasury and the premiums paid for the same. Some uncertainty exists as to the amount of gold that has been secured in London to be shipped hither to houses intending to participate in the coming bond syndicate. These transactions are attended with a loss probably of about 1 per cent. It is, however, known that one firm has $500,000 on the way, while reports are current that at least $2,000,000 is in process of transfer. The withdrawals of gold from the Treasury this week were $500,000, taken on Tuesday for export to the Argentine, and $1,000,000 to be shipped to London to-day. It is also significant that of the $2,000,000 gold withdrawn at the end of last week only $500,000 was actually shipped on Saturday, the rest being retained here.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.89¾ @4.90; commercial bills, 4.86¾ @4.87; francs, 5.17½ @ 5.15⅝; reichsmarks, 95 1/16 @95⅝.

The Bank of England rate remains at 2 per cent. The bank gained £1,327,000 specie this week, and its reserve is 53.08 per cent., against 58.82 per cent. last week. The London open money market has experienced the pressure usual at the turn of the year, followed by an easing off on January 2, discounts advancing to 1¼ per cent. and declining to 1@1½ per cent., while call money, after standing at 1½ @2 per cent. for several days, receded to ½ @⅝ per cent. on Thursday.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending December 27, 1895:

	1895.	1894.
Dry goods	$2,422,915	$2,120,002
General merchandise	6,251,711	5,414,652
Total for the week	$8,674,626	$7,534,654
Previously reported	507,521,082	433,791,843
Since January 1	$516,195,708	$441,326,497

The exports (exclusive of specie) from New York to foreign ports for the week ending December 31 were $648,065 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1895.	1894.
For the week	$7,470,065	$5,951,203
Previously reported	343,726,541	354,825,764
Since January 1	$351,196,606	$360,776,967

THE STOCK MARKETS.

The New York Stock Market.

Early in the week Wall street was confirmed in its belief that the government would issue $100,000,000 of 4 per cent. to provide gold for the Treasury specie reserve. The announcement followed that J. P. Morgan & Co. were forming a syndicate to subscribe for this amount, with the further privilege or obligatian (as it may be regarded) to take a supplementary issue of a like sum. It also transpired that the syndicate has been largely oversubscribed, that foreign interests have taken part in the operation to an unknown amount, and that banks and institutions throughout the country, as well as in this city, have shown marked readiness to surrender their gold holdings for a share in the new bonds. These developments have checked the depressing influences that affected the stock market, and caused a very strong undertone to assert itself. Prices were steady to strong on Monday and Tuesday in the face of a stringent money market, and when the Exchange reopened on Thursday, after the new year's holiday, the intense dullness and waiting disposition were accompanied by an equally marked belief that the market would improve. Slight weakness in prices on Friday morning was followed late in the day by a rally, the closing tone being dull but decidedly strong.

The "street" is fully aware of the reasons for delay in making public announcement of the new bond issue. It is fully appreciated that the Senate must be allowed an opportunity to act upon the bond bill which passed the House of Representatives last week. There seems to be no doubt that the Senate Finance Committee, which is dominated by the silver men, will convert the bill into a free silver coinage measure. The report of the committee, it is concluded, will be the signal for action by the administration in regard to issuing the bonds, and this may carry the operation over till next week. At the same time there is no evidence that the Morgan syndicate has made a definite contract with the Treasury, and the price at which the bonds will be taken is also unknown. It is, however, concluded that the operation will take the same form as the arrangement between the Treasury and the Belmont-Morgan syndicate in February, 1895, namely, that the new syndicate shall furnish gold for the bonds, and that the price for the latter will be 105¾, with a commission of 1 per cent. to the syndicate. One of the provisions is that subscribers shall not withdraw gold from the Treasury for the purpose. This has caused what is termed a scramble for gold, and a premium of from ¾ to 1¼ per cent. has been paid this week for gold not subject to this limitation. Some amounts of coin, reputed to be as much as $2,000,000 to $3,000,000, have been procured at London, and are being transferred to this city by people intending to participate in the syndicate. Under these circumstances the exchange market is in a peculiar state. Rates for demand sterling have been above the gold-export point, but bankers have been loath to ship, and only $1,500,000 was taken from the Treasury for the purpose. Indeed, the greater part of the $2,000,000 gold withdrawn from the Treasury at the end of last week for export on Saturday, December 28, was not forwarded as originally intended. The money market is sensitive and nervous, but has quieted down considerably. Rates for call loans were stringent on Monday and Tuesday last, and the bulk of the business on the Stock Exchange was transacted at 10@25 per cent., though much lower rates were quoted. Fortunately the joint settlements and disbursements were effected without real trouble, and without any recourse on the part of the banks to the expedient of taking out loan certificates. By Friday the market had returned to a normal level of 6 per cent.

London has not been an important factor in this market. The unfavorable feeling toward American securities caused by the Venezuela incident has become less pronounced, but leading houses there, including the Rothschilds, have refused to interest themselves in the new United States loan. The political troubles in South Africa have in a measure withdrawn attention from American stocks and financial affairs, and it is to be remarked that while London prices were lower on several days than the quotations here, there was little or no selling from that quarter. Several important German financial interests are reported, however, to be large subscribers to the Morgan bond syndicate.

There have been few features of interest. Baltimore & Ohio recovered ground on the payment of its January interest. Reading declined to 4, the lowest price on record on Friday. Western Union was the object of a selling movement throughout the week, and American Tobacco stock advanced on rumors of a settlement of the trade war.

Boston Stock Market.

[Special to BRADSTREET'S.]

Trade has been very slow during the week, with only moderate trading in any line. Atchison closes unchanged in price, with light sales, while Mexican Central has attracted little attention and closes ⅛ point off in price. Copper stocks have been slow, but Calumet & Hecla has advanced 1 point, with Tamarack 2 points lower. Bell Telephone closes 4½ points lower than a week ago.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price Jan. 2, 1896.	Price Dec. 26, 1895.	Sales Jan. 2, 1896.	Sales Dec. 26, 1895.

TRADE QUIET.

WHOLESALE MERCHANTS TAKING ACCOUNT OF STOCK AND PREPARING TO SEND OUT COMMERCIAL TRAVELERS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, January 3.—The market has shown the effects of the holidays and the turn of the year, and in nearly all lines of business trade has been slow. Operators are busy balancing their books and getting ready for the new year. The money market has been quiet, but rates are high, call money being let at 6@8 per cent. and time money at 6@9 per cent. There is little new in the boot and shoe trade, although with hides showing a firmer tone at the advance, the feeling in leather and footwear is firmer. The former is yet in full supply, and values are unchanged. In the iron and steel trade business is slow, and values rather favor the buyer. The general demand is seasonably quiet. Lumber is meeting with a steady demand, the open weather being favorable for building. Coal is dull, and the market is depressed by the unseasonably mild weather.

Philadelphia, January 3.—A quiet tone pervades the market. Petroleum is dull and unsettled and prices are low. Leather and morocco are in moderate request at firm prices. Boots and shoes are dull. Demand for groceries and for provisions is light, but prices have not changed. Collections are poor and money seems scarce with interior merchants. Iron is dull and prices are low.

Pittsburgh, January 3.—The condition of local trade remains practically unchanged and business in all branches is dull, although prices on all staples seem to be well maintained. With the new year trade is expected to show a marked increase, and dealers are apparently sanguine as to future business. The iron market remains quiet, and prices continue to show a downward tendency. Dealers generally look for no improvement until some of the furnaces now in operation shut down, as the market is apparently overstocked, and it will take some time to dispose of the surplus accumulation.

Buffalo, January 3.—General trade has been exceedingly dull since Christmas. Attention has been turned to stock-taking and the closing up of the year's business.

Baltimore, January 3.—The general trade are well satisfied with the result of the business of 1895. Collections, as a rule, have been very satisfactory, and the merchants are hopeful for a good business during the coming spring. Houses that have salesmen out on the road report orders coming in freely, and the travelers say there is every indication for a good trade, especially in the south.

West and Northwest.

Cleveland, January 3.—The general rounding up of the year is the only noteworthy feature of the merchandise trade situation. Holiday business fairly satisfactory, and a favorable spring trade opening is looked for. The iron and steel markets are quiet.

Chicago, January 3.—The jobbing trade for the year shows an increase of 10 per cent., and the manufacturing interest increased 10 to 15 per cent. Business this week has been interrupted by the holiday, and also by salemen being in from the road. Sales are light, as they are generally expected to be at the opening of the year, and no new features are shown in any line. Merchants have fair stocks and the country has enough for the present, so that no rush of orders is expected inside of thirty days. The produce trade is quiet, with butter and poultry lower. Wool receipts, 23,117 pounds.

Detroit, January 3.—The usual after-holiday quiet prevails in most lines, and stock-taking is the order of the day. Trade conditions generally are reported fairly satisfactory, but collections are poor.

Louisville, January 3.—General business is void of special features, and the usual quietness following the holidays prevails.

St. Louis, January 3.—Business in all lines is very quiet, and almost altogether of a mail order character. Merchants in general say that the balancing of books will probably show a substantial increase in trade over last year, while the volume of business in some lines will exceed that of 1892. Prospects are regarded as favorable, and travelers are getting out a better line of samples. Numerous inquiries for considerable tonnage are received by pig iron agents, but actual transactions are small. Iron and steel are quiet; steel bars lower. The Bar Iron Association were to meet in Chicago on the 3d inst.

Kansas City, January 3.—The usual dullness incident to after-holiday trade is noticed in all lines, with slow collections. Live stock shipments are liberal, with fair values. Packers are busy and report large orders.

Milwaukee, January 3.—The movement of merchandise has been somewhat slow on account of intervening holidays. Merchants look for a fair spring trade. Collections are a little slow.

St. Paul, January 3.—The usual first of the year quiet is noticeable this week, and, as a usual thing, traveling salesmen are at headquarters preparing for the coming season, and it is too early to predict what the spring trade will be. Business is quiet in all departments.

Minneapolis, January 3.—Trade conditions are about as usual at this time of the year, with favorable prospects.

Duluth, January 3.—Carrying trade on the lakes has had the best year in its history. Railroads report good business both in moving crops and in merchandise freight. Prospects are that there will be extensions of railroad lines into the iron field and toward the Red river valley. Operations on the Board of Trade here were 50,000,000 bushels in 1895, against 32,000,000 bushels for 1894. Flour is active. Eastern stocks are light, and there is little on hand. Lumber is unchanged. Yards are heavily stocked, and prospects indicate the cut will not be more than three-quarters of an average. Jobbers in merchandise had a good year. Activity on the iron ranges has helped them. The prospect is for a

good year in 1896. Iron mining and shipbuilding interests will continue active. Real estate and loaning interests are not sanguine, but are hopeful.

Omaha, January 3.—Trade shows no material improvement. Collections are fair.

Sioux Falls, January 3.—Usual dullness is noticed in all circles, but a general sense of satisfaction prevails. Banks report a very satisfactory year. Money easier. Statements generally show funds in good proportion. Collections are very fair.

Southern Cities.

Charleston, January 3.—Business in all lines has been quiet during the week. Collections are slow.

Savannah, January 3.—Jobbers and retailers report trade quiet, with fair collections. Turpentine and rosin receipts and shipments about the average.

Atlanta, January 3.—Retail trade is quiet; wholesale lines are holding up fairly well. Collections are fair.

Augusta, January 3.—Trade in retail and wholesale lines is quiet. Collections are fair. Jobbers are preparing to send out salesmen, with expectation of doing a good spring business.

Jacksonville, January 3.—Trade and collections are slow for the week.

Birmingham, January 3.—Trade is quiet.

Chattanooga, January 3.—Prospects are favorable. Country merchants are considered on a firmer basis than for some time. Collections have been satisfactory.

Nashville, January 3.—Trade in all lines is quiet. Collections continue favorable from country. Town collections slow.

Memphis, January 3.—Business in all lines is quiet. Collections fair.

New Orleans, January 3.—There is the usual holiday dullness in jobbing lines. More active movement of cotton. Sugar is strong at the advance and arrivals are promptly absorbed. Rice still is dragging. Money is in good demand for carrying crops. The market has hardened, but rates are not quotably changed.

Galveston, January 3.—Jobbers anticipate a fair spring business, but complain of poor collections.

Pacific Coast.

San Francisco, January 3.—Commercial lines are dull. Produce quiet. Grain market firm. Flour advanced 15c. to-day. Wheat freights nominally unchanged, but tend downward. Collections only fair. Frosts have slightly damaged the orange crop. Farmers are anxious for rain.

Portland, January 3.—Retailers report business good for the last of the holiday week and fair at present. The wholesale trade shows no change. Most merchants are busy with annual inventories. The lumber trade holds its own well, and is being pushed energetically in Mexico, South America and China. Collections are slightly easier.

Seattle, January 3.—Business is rather quiet. After the holidays the merchants are stock-taking. It is estimated there has been a general increase in all lines of 5 to 25 per cent.

Tacoma, January 3.—December lumber shipments exceed all previous records. Harbormaster reports year's business: Imports value over $17,000,000; exports value, $4,633,000.

Canada.

Toronto, January 3.—The past week has been a very quiet one in trade. Leading staples, however, are firm in prices. Collections are only fair.

Montreal, January 3.—The volume of trade has been broken into by New Year's day, and retail trade shows some reaction. The lack of snow renders country roads bad, while the weather has been unseasonable. No new features have presented themselves, but with good sleighing and better weather prospects are looked upon as somewhat encouraging.

Halifax, January 3.—The volume of trade for the week has been very light; wholesalers for the most part are engaged in stock-taking. Remittances from the country are complained of. Advices from New Brunswick state that the mild weather and absence of snow is materially interfering with the lumbering interests, making operations more difficult and expensive than for many years.

Dry Goods.

[Special to BRADSTREET'S.]

The market is quiet, the holidays and the turn of the year being unfavorable for much business at first hands. Jobbers are getting new goods opened and starting traveling men on the road with spring samples. Agents are also busy delivering goods sold ahead, but, until the new year's business gets started, will not do much in the way of sales. Cotton goods are dull, but in the face of the lack of demand, manufacturers are not disposed to shade prices. The advance in the price of goods from the lowest point has been nowhere in proportion to the increase in the cost of raw cotton, and if the latter is going to remain high, no one wants to sell goods lower. Dress woolens are quiet at first hands, but jobbers are preparing spring offerings. Mohair effects and plaids promise to be popular. Men's-wear woolens are quiet, but some business in the way of taking heavy-weight orders for next fall is reported.

Wool.

[Special to BRADSTREET'S.]

The market for wool has felt the effect of a little boom on account of the proposed tariff amendment. Values for some grades of wool have advanced about 1c. per pound. The sales in Boston last week footed up nearly 10,000,000 pounds under the effect of the excitement. At the close the market is more quiet, but prices are held firm at the advance. For XX and above Ohio fleeces the market is quotable at 20@21c., with medium grades also 1c. higher. Territory wools are held about ½c. higher, but the scour range is yet about 34@36c. for fine medium and fine. Australian wools are firm and higher on the scoured basis of 40@50c. for combings and 38@50c. for clothing grades. The stock of wool in Boston January 1 was 44,878,000 pounds domestic and 10,076,500 pound foreign—total, 54,954,500 pounds—against 31,823,000 pounds domestic and 5,835,000 pounds foreign—total, 37,658,000 pounds—a year ago.

RAILWAY CONSTRUCTION IN 1895.

The *Railway Age* says: "Railway building in the United States reached this year a lower point than in any of the last twenty years; indeed, in only two years since 1865, thirty years ago, has so small a mileage been built. Our records for 1895 now show only 1,782 miles of track laid, a tremendous decline from the great year of 1887, when almost 13,000 miles were put down. In the eight years since that time the decrease in construction has been great and continuous, and this year the total built was only about 100 miles more than in the year 1855—forty years ago. How the new track laid in 1895 is distributed will be seen from the following table, to which it is possible final returns may make a slight addition:

TRACK LAID DURING 1895.

	Lines.	Miles.		Lines.	Miles.
Alabama	6	53.49	Minnesota	7	33.96
Arizona	2	63.30	Mississippi	3	13.00
Arkansas	5	32.00	Missouri	2	33.43
California	7	95.50	Montana	2	10.10
Colorado	2	15.90	New Jersey	1	5.00
Florida	8	71.25	New York	8	68.81
Georgia	7	81.75	North Carolina	5	39.30
Indiana	4	16.92	Ohio	10	87.05
Indian Territory	3	149.71	Oklahoma	1	47.88
Illinois	8	78.33	Pennsylvania	13	86.57
Iowa	1	11.66	South Carolina	1	6.33
Kansas	2	17.70	Texas	13	224.22
Kentucky	4	25.00	Utah	2	10.00
Louisiana	4	50.83	Virginia	3	43.00
Maine	4	86.14	Washington	1	2.61
Maryland	2	2.70	West Virginia	7	85.95
Michigan	10	70.90	Wisconsin	5	35.50
Total in 34 states and territories				163	1,782.39

SUMMARY BY TERRITORIAL GROUPS.

	No. States.	Lines.	Miles.
New England group	1	4	86
Middle Atlantic group	4	24	164
Central northern group	5	37	295
South Atlantic group	6	31	327
Gulf and Mississippi valley group	4	17	142
Southwestern group	7	28	540
Northwestern group	3	10	56
Pacific group	4	12	172
	34	163	1,783

"For the neighboring countries on the north and south our record shows:

Canada, 14 lines.....miles added, 192.75
Mexico, 4 lines.....miles added, 75.65

"Not only are the mileage and number of new lines for 1895 smaller than the annual totals for many years, but the number of states in which no track was laid is larger. Of the forty-nine states and territories into which the country is now divided fifteen made no increase of railway mileage last year, namely: New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Delaware, Tennessee, Nebraska, North Dakota, South Dakota, Wyoming, Oregon, Nevada, Idaho and New Mexico.

"Only one New England state added any track. The largest mileage laid was in Texas, 224 miles, followed by Indian Territory with 150, California with 96, and Ohio, Pennsylvania, West Virginia, Maine and Georgia with between 80 and 90 each. The southwestern group of seven states added 540 miles on 28 lines, while the ten states in the south Atlantic and Gulf and Mississippi valley groups come next with 452 miles on 48 lines, the greater part of the new mileage thus being in the south and southwest. The new construction in general consisted of short branches and extensions, the average for the 164 lines built being only a little over 10 miles each.

"The rapid decrease in railway building in the last years may be seen by the following figures from our record of actual construction:

	Track laid, miles.
1887	12,983
1888	7,100
1889	5,230
1890	5,070
1891	4,281
1892	4,192
1893	2,635
1894	1,949
1895	1,782

"The bottom has been reached, and a moderate revival of railway building may be looked for. Materials are exceedingly cheap, labor is abundant, practicable enterprises are numerous, and on some of them much work has been done; business is reviving in spite of terrific assaults from political and speculative quarters, and the needs of many local-

ities for greater transportation facilities must be met. It is true that the remarkable development of electric railway building has had a repressive effect upon not a few local projects, but for transportation lines of any considerable importance the steam locomotive does not yet recognize any competition and the building of steam railways is still to go on, although the pace of former years may not again be equaled. The railways of the United States on December 31, 1895, will aggregate a little over 181,000 miles."

COMPETITION WITH BRITISH TRADE.

A correspondent of the London *Times*, referring to the methods by which trade competition with England is being fostered and protected by the governments of other European countries, says: "Persistent rumors have for some time been heard to the effect that the Belgian government propose as soon as possible to establish a line of their own steamers, which shall run daily between Ostend and London, competing on behalf of Belgium for commercial seaborne traffic. The ostensible object of this proposed service is to confer benefit upon Belgian agriculture, by carrying its produce into English markets at almost nominal rates of carriage and freight. These charges are, indeed, to be so low as to preclude the possibility of competition being successfully maintained, either by distant home producers, or by the shipowners of England or any other country. No attempt would be put forward to make the line pay for itself, because the money sacrificed upon the sea carriage would be fully recovered in the increased revenue accruing to the Belgian state railways from the larger volume of business which they would consequently attract. If limited to agricultural traffic, the threatened rivalry would be serious enough in itself, but it would in that case have comparatively little effect upon British merchant shipping. There is, however, no doubt that the scheme would embrace a much wider field of operations, and would tend to the diversion of our vast colonial wool export and of all other descriptions of transhipment merchandise traffic, inasmuch as the Belgian railways, being under the control of the government, would draw to Ostend the whole of the British traffic passing through the port of London destined for different parts of Europe, and would at the same time abstract from the other continental ports large quantities of European produce and manufactured goods intended for British markets. This European traffic—whether coming from the south through the Italian ports, or from the north via the German, Dutch, Belgian or French ports—is at the present time almost exclusively in the hands of British shipowners. It would, of course, be impossible for any one port, or for any single line of steamers, to conduct the enormous business which would follow such a concentration, but the conditions of the through service so created would lead surely and quickly to the transfer of a very large share of this trade from the British to the Belgian flag. It is now perfectly clear that there is substantial foundation for the many rumors which have been circulated regarding this ambitious project. Orders have been given to the well-known firm of Messrs. Cockerill & Co., at Hoboken, for the construction of a fleet of cargo boats of large carrying capacity to maintain throughout the year a daily service between Ostend and the Thames. Considerable progress has already been made with two of these steamers, and others are to be built as soon as possible. The London Direct Short Sea Traders' Association—representing 130,000 tons of British shipping, and including nearly the whole of the shipowners engaged in the London and continental trade—has been the first to take action in defense of British interests, and has addressed a communication to Lord Salisbury, as Secretary of State for Foreign Affairs."

BRITISH SHIPBUILDING IN 1895.

The total tonnage of shipbuilding in the United Kingdom in the year 1895, says an exchange, "has been found to amount to 1,144,442 tons, as compared with 1,105,931 tons in the previous year. The tonnage of new shipping constructed in the colonies and foreign countries amounted for the same period to 151,305 tons, as compared with 200,665 tons in the previous year. There was thus a substantial increase of tonnage at home and a decrease of tonnage built abroad in the current year. The largest tonnage, as usual, falls to the Clyde, which launched 360,152 tons in 1895, as compared with 340,885 tons in the previous year. After the Clyde, again following the former usage, came the Tyne, with a tonnage of 166,065 tons, compared with 190,641 tons in the previous year. It is, however, rather a common custom in the north of England to take the whole group of rivers in that region—the Tyne, the Wear, the Tees, and Hartlepool—and compare them with the Clyde district, which would show a largely preponderating tonnage for the north of England. Belfast is the next most important shipbuilding center in the United Kingdom, after the rivers named, and in this notable center the tonnage built in 1895 has been 101,816 tons, as compared with 97,901 tons in the previous year. The statistics of the other centers of the British shipbuilding industry do not appear to call for any special comment.

"The figures which we have cited do not give color to the idea that the shipbuilding industry either has had a bad year or is likely to be worse off in the immediate future. It is quite true that the prices at which ships are now being constructed are very low—lower, in all probability, than they had ever been known to be before. But that very fact is the chief explanation of the great activity which has been apparent in the trade of building steamers during the past twelve months, and more especially of the fact that the foreign production of tonnage continues to be so much smaller than our own. So far as the available statistics go, they appear to prove that Great Britain is increasing her hold upon this industry instead of relaxing it. This is, of course, a very gratifying fact, and one that goes some way to dispose of the common clamor that we are being ruined by foreign competition. Germany and the United States have built splendid vessels, it is true, both for war and for ordinary merchant purposes, but neither appears to have yet succeeded in proving that it can construct ships to compete successfully with our own in price and in quality. But how about the future? It is not to be supposed that such serious conflicts as that which is now going on in the shipbuilding industry of the Clyde and Belfast can be permitted to take place without serious detriment to that prëeminent place which we have succeeded in acquiring in this splendid industry. It is no exaggerated idea to suppose that a continuance of such disputes would see us, to borrow from a recent cartoon of *Punch*, dependent more or less on a fleet 'made in Germany.' In view of the situation now before us, we would urgently counsel employers and employed to seek for peace. If that end is quickly accomplished, all may yet be well. If it is not, then we are likely to have a very different record of comparative results at the end of the year 1896, for continental countries and the United States will by that time have surely, and perhaps largely, profited by our folly and its entailed misfortunes."

RURAL LOAN ASSOCIATIONS IN GERMANY.

The Philadelphia *Ledger* says: "The most recent consular reports of the State Department, at Washington, deal with the success of the 'loan associations' in the rural districts of Germany. Philadelphia has long been an object lesson as to the value of our 'building associations,' which are, after all, loan associations. With the capital thus accumulated, vast sums have been loaned out for men wanting to own their own homes, and the results have been in the highest degree satisfactory alike to lenders and borrowers. In Germany the same system has been applied for uniting the small savings of farmers and others into funds loaned out to members of the association which takes charge of the money. Good standing and the personal security of a friend are the first condition. The loans are made for a year, as a rule, although they are often extended, for the members are neighbors and know one another, and each case is considered on its merits.

"The original loan associations, started about 1850 by an enterprising local mayor, and still bearing his name, buy by the wholesale large stocks of seed, artificial manure, fodder, fuel and flour, to be sold at just a little above cost to their members. Later similar loan associations were organized in towns and villages to lend money and supply raw material to dealers, thus, in fact, sharing their profits and strengthening them in extending their business. Then, too, both classes of these loan associations, instead of remaining isolated, unite in large districts so as to promote agricultural societies and the credit system, and in some cases the local governments, in recognition of the advantages of this sort of self help, have made gifts of money, liberal according to the economical standard of Germany, to defray the cost of thorough inspection by expert accountants and to encourage the increase of these loan societies. Clergymen, school teachers and other officials are encouraged to become the executive officers of the loan associations in their neighborhoods, and the growth may be estimated from the figures. The town loan associations in 1893 numbered over 1,000, and their loans amounted to nearly $400,000,000, nearly a fourth to farmers owners of farms in the vicinity. The country loan associations were over 700, and their credit business amounted to $6,000,000. In Wurtemberg the Royal Bank became the banker for over 500 country loan associations and loaned them in their united body over $800,000. Thus these mutual benefit loan associations have practically put an end to usury and relieved the hard-working German farmer and peasant of his worst enemy, the money lender, while the same farmer may in good seasons be an investor, and in bad times can safely count on being a borrower. In striking illustration of the value of these official reports by our consuls abroad is a recent article in the *Contemporary Review*, one of the leading exponents of English thought, on 'Coöperation in Agriculture,' in which attention is called to coöperative selling as a means of counteracting the mischief of speculation and gambling in wheat, corn, etc. In France agricultural syndicates have been successful alike in buying and selling, and the German associations have been the types of coöperation to meet the depression of hard times and low prices. Even legal services are secured for all the members in a given district, thus putting a spoke in the wheel of various kinds of fraud practiced on innocent and unsuspecting farmers. In Germany coöperative loan associations have helped to tide over drouths and other unforeseen disasters, and dairies, vineyards and country stores draw their resources from the rural loan associations, credit banks, which give their support in the most serviceable shape possible, demanding little but good security as the condition of a loan of the money deposited by the well-to-do neighbors, and collecting the debt out of profits often rapidly, but always with due consideration of time and conditions. France and Italy have followed. In Germany the most moderate estimate fixes the aggregate of these loans at over $100,000,000 annually, and the Imperial Bank of Germany advances every year for this purpose over half that sum to the associations engaged in the business. The losses on agricultural loans are very small, but this is due to the watchful care of the coöperating members who help their borrowing neighbor to tide over hard times, and in the end benefit him and get back their own money."

ONE HUNDRED YEARS OF AMERICAN COMMERCE.

Advance proofs of a forthcoming volume entitled "One Hundred Years of American Commerce" indicate the book is to consist of one hundred original articles on commercial topics, describing the practical development of the various branches of trade in the United States within the past century, and showing the present magnitude of our financial and commercial institutions. There is also published in connection therewith a chronological table of the important events of American commerce and invention within the past one hundred years. The work, which is a quarto, is published by D. O. Haynes & Company, at New York, and is edited by Chauncey M. Depew, LL.D. From among some of the more striking subjects discussed, extracts are given as follows:

Dr. Depew's paper says in part: "The nineteenth century closes with civilization more advanced in the arts and in letters than in the best days of Greece or Rome or the Renaissance; with a development in mechanical arts, in chemistry and its appliances, in agriculture, and in manufactures beyond the experience of all preceding centuries put together. The political, social and productive revolutions and evolutions of the period mark it as unique, beneficent and glorious in the story of the ages. It has been the era of emancipation from bigotry and prejudice, from class distinctions, and from inequalities in law, from shackles upon the limbs and padlocks upon the lips of mankind. * * *

"The twentieth century will be a truthseeking century. Continuing concentration and centralization of capital in great enterprises and in every field of production will be compelled by small margins of profit and the competition of instantaneous and world-wide communication. At the same time, labor, more skilled, better educated, more thoroughly organized, finding a larger purchasing power in wages, and intelligently commanding its recognition by international compacts, will improve its condition, will find the means of quick and peaceable settlement with capital, and the relations of these two great forces will be much more beneficent and friendly.

"Then there will be an increase in socialistic ideas and tendencies. The aim will be for a full and complete experiment of the principles of state paternalism and municipal communism. As we face the future, we have no doubts as to the result, nor do we doubt that the inherent vigor of nations is greater as their institutions rest upon the liberty of the individual; yet, like the French revolution, and the theories and experiments which carried away the best thought and the highest aspirations of our own country fifty years ago, the popular tendency is for the trial of these methods of escape from ever-present poverty and misery and old-age disability. * * * It will also exhibit increased and more general happiness, and the relations of all classes and conditions with one another will be on more humane and brotherly lines than we find them as we look back. * * *

"Let us reckon American manufactures from the infancy of the cotton and wool production in 1794 at practically zero on the one side, and on the other, Europe, with the accumulated capital of over a thousand years and the accretion of the skill of all the centuries. The racecourse of progress was open to the Old World and the New. Father Time kept the score, and Liberty said, 'Go!' To-day, after one hundred years, the American farm has become the granary of the world; the American loom and spindle and furnace and factory and mill supply the wants of 70,000,000 people in our land, and send annually $200,000,000 in value of product abroad for other countries. Europe, pushing forward on a parallel course, finds herself outstripped at the close of the century by this infant of its beginning in agricultural production, in manufactured products, in miles of telegraph and of railway, and in every element of industrial and material production and wealth."

Governor Morton, in the course of his paper comments as follows on the late financial depression:

"In this year (1892) came upon the country the beginning of the depression of business and financial stringency that is now so happily showing signs of abatement. It came more gradually than such crises usually come, and has been more persistent. Without actual panic the country verged perilously near to disaster. The money broker, who had almost disappeared since the days of the war, reappeared and secured premium for currency of any sort. The banks had very little money of any kind, and for a time payments were almost wholly in certified checks. This showed that the trouble was not really organic, and vast sums of idle money, hoarded and withdrawn from circulation, further attested that the country was not impoverished. But confidence was lacking, and it operated as a check on enterprise, which, reacting industrially, as it always does, reached all classes and caused much suffering. It also gave rise to the great danger of a run being commenced on the savings banks. In the west, indeed, this did happen, and many perfectly solvent institutions were forced to the wall, being unable to realize quickly enough on their securities to meet demands. In New York, when the trouble became threatening, and a rush of eager, excited depositors was to be expected at almost any moment, the savings bank officials met, and, taking advantage of the law, declined to pay any accounts without three months' notice. This saved the banks, but it was the nearest approach to suspension that had been known since 1873.

"The causes of the trouble have been matter for much discussion and difference of opinion during the past two years, and a belief that its roots lay in certain fallacies of national finance has caused action by Congress, which has undoubtedly been beneficial in its effect. Still, it is questionable whether the true seat of the difficulty has been, or will be, reached by any of these measures or plans of alleviation. An overreaching speculation, which had locked up resources that should have been available, coupled with great uncertainty and some apprehension, perhaps owing to political events and the commercial and industrial changes they might be expected to bring with them, had much to do with it. To-day, it is pleasant to believe we have passed beyond it."

Carroll D. Wright, in discussing "American Labor," treats his subject on broad grounds. He discusses the changes in the systems of labor, and speaks of the introduction of the labor of women into factories as due largely to the use of light running machinery in the manufacturing establishments. He declares that the price of labor has increased 60 per cent. in the century, while "the general course of prices has been downward." He speaks of "organized labor" as numbering at the outside 1,400,000 of the 15,000,000 wage-earners, and declares that the era of strikes is passing away. He adds: "The great strikes in the country have had a marked influence in many directions. They

have excited working people to undertake other strikes; they have brought bitterness between employer and employee, and yet on the whole they are bringing a new line of thought to the public mind, and their study will, I fell sure, result in good to all classes."

In telling of the century's imports and exports, Worthington C. Ford says that agriculture now, as was the case 100 years ago, still forms the largest part of our exports. The exports have risen from $6 per capita in 1795 to $11 in 1895, and he declares that the "lines of the export trade of the United States are so broad and well defined that nothing within the reach of human possibilities can destroy their main features."

In his paper on "Interstate Commerce," Secretary Mosely of the Interstate Commerce Commission, goes into the history of lake and river navigation, and the rise of railroads and the amount of capital employed in the traffic, and says that it is "difficult to believe that the railways of the country moved in 1893 more than eleven tons of freight for every man, woman and child within the boundaries of the United States."

Charles F. Clark discusses "Our Commercial Wealth and Volume of Business," and says that "whereas our national debt amounted to $18 per capita at the close of the last century and our national wealth approximately to $200 per capita, to-day the national debt is only $16 per capita and the wealth per individual somewhat more than $1,000." The population of the country has increased fifteenfold, the volume of business thirty-threefold, and the wealth of the country seventy-fivefold in the century.

Col. William Jay discusses the "Corporation in Commerce." and says "the conditions of modern life would be impossible were it not for the corporations. Whether sleeping or waking, engaged in business or pleasure, eating, drinking, dressing or traveling, or whatever we may be about, we must thank them to a great extent for the means and opportunities of doing so." He also declares that one of the evils of the growth of corporate life in this country "is a lowering of the standard of business honor and business morality." He says this spirit has done great harm in many of our towns and cities. "Franchises of enormous value—especially the right to use the streets for elevated and surface railroads—have been obtained for a most inadequate consideration. This abuse of power by corporations has been demoralizing in its tendency and mischievous in its results. It is impossible to compare our great cities with those of Europe without feeling that ours have been vulgarized, degraded and rendered hideous by the appropriation of their principal streets by private corporations for private greed. It is idle to say that public convenience requires that hideous structures like the elevated railroad should exist, or that cable cars should be run on the surface of our principal thoroughfares. It is not so."

In discussing American shipbuilding, Charles H. Cramp takes the position that no nation can be considered commercially independent unless it has a merchant marine and an adequate navy to defend it. He says we are to-day practically "in subjection to the trade impulses of Great Britain," and will not be independent of her until the American flag is restored to the high seas. He advocates some system of government aid to this industry, because other nations give aid to theirs, and also because we give aid to the internal commerce of the country by liberal subsidies to railroads for carrying the mails. He says that Great Britain recognizes the fact that a ship carrying her flag to other countries is something more than the private property of the owner; it is part of the country itself, and the nation has a share in the ownership of such property.

Mr. Cramp says that except for the insistence of Secretaries Whitney and Tracy that our new war ships should be built here, although the cost would be greatly enhanced at first, the shipbuilding industry of this country would be practically prostrate. He declares that as a result of this ships now can be built here at only a trifle more in cost than in England, and that, ship for ship, we can produce better vessels.

With Dr. Depew as editor, there are associated as contributors many distinguished persons. Among others are Gen. Horace Porter on "One Hundred Years of New York Commerce," Charles R. Flint on "Our Foreign Trade from a Trader's Standpoint," Francis W. Ayer on "Advertising in America," Gen. Thomas T. Eckert on "The Telegraph," H. H. Vreeland on "The Street Railway in America," Hiram Hitchcock on "The Hotels of America," A. M. Palmer on "American Theaters," Gen. Charles H. Taylor on "American Newspapers," Warner Miller on "American Paper Mills," Theodore L. De Vinne on "American Printing," Philip D. Armour on "The Packing Industry," Pierre Lorillard, Jr., on "American Tobacco Factories," Albert A. Pope on "The Bicycle Industry," Charles L. Tiffany on "The Jewelry Trade," and many others, concluding with the paper by the editor, Dr. Depew, on "The Next One Hundred Years."

It should not be omitted in connection with this subject that immediately after the ratifying of the Jay commercial treaty one hundred years ago, there was founded (December 19, 1795) the *Shipping and Commercial List and New York Price Current*. In seeking some method of celebrating the centennial in a manner worthy not only of the paper, but of the business interests of the country, the idea was evolved of presenting a commercial history of the country during the past one hundred years.

STATE OF NEW YORK, COUNTY OF NEW YORK, SS.:

WILLIAM H. PERKINS, President, and WALTER M. BENNET, Cashier, of the Bank of America, a bank located and doing business at Nos. 44 and 46 Wall street, in the City of New York, in said county, being duly sworn, each for himself, says that the foregoing report is, in all respects, a true statement of the condition of the said bank before the transaction of any business on the 2d day of December, 1895; and they further say that the business of said bank has been transacted at the location required by the Banking law (Chap. 689, Laws of 1892), and not elsewhere; and that the above report is made in compliance with an official notice received from the Superintendent of Banks designating the 2d day of December, 1895, as the day on which such report shall be made; that deponents' knowledge of the correctness of the foregoing report is derived from a constant familiarity with and inspection of the affairs of said corporation, and that said report was prepared under deponents' personal supervision.

WILLIAM H. PERKINS, President.
WALTER M. BENNET, Cashier.

Severally subscribed and sworn to by both deponents, the 4th day of December, 1895, before me,

CHAS. D. CHICHESTER,
Notary Public.

BANKS.

NATIONAL

Shoe and Leather Bank

OF THE CITY OF NEW YORK,

271 BROADWAY.

Capital, - - - - $1,000,000

Solicits accounts, offering to depositors liberal treatment and every facility consistent with sound banking principles.

The Bank also acts as reserve agent for National Banks and New York State Banks.

JOHN M. CRANE, President.
JOHN A. HILTNER, Vice-President.
JOHN I. COLE, Cashier.

The Chase National Bank,

OF THE CITY OF NEW YORK.

CLEARING HOUSE BUILDING,

Cor. Pine and Nassau Sts.

CAPITAL AND SURPLUS, ... $1,500,000

Receive accounts of Banks, Bankers, Corporations, Firms and Individuals, on favorable terms, and will be pleased to meet or correspond with those who contemplate making changes or opening new accounts.

H. W. CANNON, *President.*
WM. H. PORTER, *Vice-President.* J. T. MILLS, JR., *Cashier.* C. C. SLADE, *Ass't Cashier.*

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 11, 1896.

Needed legislation is being blocked at present by the free-coinage men in the Senate. The result of the prominence given the silver element in the reorganization of the Finance Committee was seen in the action taken by the majority of the committee on Tuesday in reporting a free-coinage substitute for the House bond bill. Several of the free-coinage senators have served notice, furthermore, that the House tariff bill will not be allowed to pass without a free-coinage amendment. Until a test vote is had it cannot be pronounced with certainty whether the free-coinage men will be able to control the action of the Senate. Whether they have that power or not, they have unfortunately, under the rules of the Senate, power to delay for a long time the enactment of the legislation sent up from the House.

A certain degree of interest always attaches to the observations of Senator Sherman on financial questions. His speech delivered in the Senate last week was noteworthy for the declaration that Congress would not approve President Cleveland's recommendations as to the financial policy of the government. After a vigorous criticism of the main positions advanced by the President and the Secretary of the Treasury, Mr. Sherman declared that there was no other remedy for our financial ills except to borrow money on the best terms possible to pay current expenses, and to provide additional revenue for future wants, and that to this extent and for those purposes he was willing to support the administration, however much he might disagree with its general policy. By way of indicating the direction legislation should take, he urged that notes once redeemed should only be reissued for gold coin, and such reissue should be mandatory when coin is deposited in the Treasury, and that the resumption fund should be segregated from all other moneys of the United States, and paid out only in redemption of United States notes.

Some criticism which has been indulged in in relation to the administration's action regarding the new loan has elicited from the President a letter to Senator Caffrey, of Louisiana, in which, while admitting that those charged with the responsibility of maintaining our gold reserve, so far as legislation renders it possible, have anxiously conferred with each other, and, as occasion permitted, with those having knowledge of financial affairs and present monetary conditions, as to the best and most favorable means of selling bonds for gold. Mr. Cleveland declares that no banker or financier, nor any other human being, has been invited to visit Washington for the purpose of arranging in any way or manner for the disposition of bonds to meet the present or future needs of the gold reserve. Nor, the President adds, has any arrangement of any kind been made for the disposition of such bonds to any syndicate, or through the agency of any syndicate, nor has any assurance of such a disposal of bonds been, directly or indirectly, given to any person; but, in point of fact, a decided leaning toward a popular loan and advertising for bids has been plainly exhibited on the part of the administration at all times when the subject was under discussion.

The Venezuelan Boundary Commission has organized by the selection of Justice Brewer, the first named member, as president. The commission will meet at the State Department to-day, when it will probably request the Secretary of State to furnish it with such documentary and graphic evidence as he has to offer in aid of the determination of the boundary question. Much evidence of importance will have to be received from Venezuela, at whose capital the evidence in support of its claim has been for some time in process of collection. It is understood that the British papers in the case are being prepared for presentation to Parliament, and while, of course, they will not be officially submitted to the commission, they will be completed in time to be available for the information of that body. The deliberations of the commission will tend to throw an atmosphere of judicial calm about the consideration of the question.

Methods of counting a quorum have been under consideration lately by the House Committee on Rules, with the result that it has recommended that whenever a quorum fails to vote on any question, and a quorum is not present, and objection is made for that cause, there is to be a call of the House, and the sergeant-at-arms is to bring in absent members, the yeas and nays on the pending question at the same time being considered as ordered. The clerk is to call the roll, and each member as he answers to his name may vote on the pending question, and, after the roll-call is completed, each member arrested is to be brought by the sergeant-at-arms before the House, whereupon he is to be noted as present, discharged from arrest, and given an opportunity to vote, and his vote is to be recorded. If those voting on the question and those who are present and decline to vote shall together make a majority of the House, the Speaker shall declare that a quorum is constituted, and the pending question shall be decided as the majority of those voting shall appear. This plan is more careful and less peremptory than that adopted by Mr. Reed during his former speakership, and is substantially identical with that proposed by a former distinguished member of the House, Mr. J. Randolph Tucker, many years ago.

Pension appropriations as reported to the House for the next fiscal year are slightly below those for the current year, amounting to $141,325,820. The bill carrying the appropriation provides that in expending it during the fiscal year covered, whenever a claim for pension under the act of June 27, 1890, has been or shall hereafter be rejected, suspended or dismissed, because of any defect or informality in the application, and a new application shall have been or shall hereafter be filed, and a pension has been or shall hereafter be allowed in such claim, such pension shall date from the time of filing the first application, provided the evidence in the case shall show the disability to have existed or to exist at the time of filing such first application, anything in any law or rulings of the department to the contrary notwithstanding.

Efforts to procure the appointment of a joint commission to investigate and report upon the Behring sea fisheries are again under way. A bill similar to that reported by the last Congress, authorizing negotiations with Great Britain, Russia and Japan to that end, has been introduced by the leader of the House of Representatives, Mr. Dingley. The bill provides that, pending the report of the commission, the President is to conclude a modus vivendi with any or all of the governments named, providing for new regulations or suspending or altering the regulations established by the Paris tribunal, the modus vivendi to expire January 3, 1897. The provisions of the act of April 6, 1894, providing punishment for violations of the articles of award of the tribunal of arbitration, are made applicable to all violations of the modus vivendi. If the latter be not concluded and put into operation for this year's sealing season, then the Secretary of the Treasury, with the approval of the President, is authorized to take and kill every fur seal found on the Pribylof Islands, the skins to be sold by him to the best advantage.

An effort is to be made at the present session of Congress to have the Department of Labor, which is at present under a commissioner who is not a member of the Cabinet, made a full-fledged executive department, with a secretary of Cabinet rank at its head. A bill to this effect has been introduced by Representative Babcock, of Wisconsin. The measure provides, also, for the appointment of an assistant secretary, and for the payment to both secretary and assistant secretary of the same salaries paid to similar officials in other departments. The introducer of the bill argues that the industrial classes are as clearly entitled to have an executive department of Cabinet rank to represent them as are the agriculturists, and that while the heads of the other departments may be friendly to labor, they cannot give questions affecting labor the thorough consideration which a secretary specially commissioned to do so would. It would be interesting to learn the views of Commissioner Wright upon the proposal.

In its annual report, just submitted, the New York Board of Railroad Commissioners suggests amendments to the existing law empowering the board to certify the whole or a part of the route proposed by a new corporation, or to compel an existing corporation to build such additional lines as are deemed to be required by public convenience and necessity; amending section 90, subjecting extensions to the provisions of section 59, compelling all passenger and drawing-room or sleeping cars on steam surface railroads, and all passenger cars on elevated railroads, to be lighted by gas or electricity; compelling the blocking of guard rails and frogs with some suitable device; defining the character of fences to be erected by railroad companies between railroad and private property, and compelling the use of fenders on street surface cable or electric cars, and generally regulating the operation of such roads as to speed, use of air or power brakes and other safety appliances.

A congratulatory dispatch from Emperor William of Germany to the president of the Transvaal republic aroused a very considerable degree of excitement in Great Britain, and for some days the press teemed with bellicose utterances. During the last day or two the strain between the two nations appears to have relaxed, and there has been a return to a more peaceable tone in the outgivings in the press. The moderation and conservatism of President Kruger have constitued the most notable feature of the incident.

THE BOND ISSUE.

The financial public, in spite of the warnings which last week's discussion in the Senate might have afforded, was not quite prepared for the action of the administration announced on Monday last. It had naturally concluded that, following the precedent set last February, a new bond issue for the replenishment of the depleted Treasury gold reserve would be placed with a syndicate, and as Mr. J. P. Morgan, who was one of the two managers of the preceding syndicate, had already organized a strong combination for this especial occasion, there was every reason to conclude that an arrangement would be made with him and his associates. The circular issued by the Secretary of the Treasury, however, invites proposals for $100,000,000 of United States 4 per cent. thirty-year bonds, to be paid for in coin, bids to be received for thirty days from the issue of the circular, when allotments will be made. In short, the Treasury adopts the form of a popular subscription instead of an arrangement with a banking syndicate.

Surprise rather than positive disappointment was at once created in financial and speculative circles on the announcement of this step. It was promptly argued that the delay involved in waiting such an extended period as thirty days for closing of the proposals would afford every opportunity before February 5 for the development of unfavorable elements in the situation, including a further depletion of the gold reserve, not only on account of shipments of specie to Europe, but from the natural tendency, against which the government has no means of guarding itself, on the part of those desiring to bid for the bonds to secure the gold for that purpose from the Treasury. The possible disbandment of the syndicate was also suggested, and in its general features the form of a popular loan adopted by the President and the Secretary of the Treasury was criticised as an uncalled for prolongation of an already strained condition of affairs. On Monday and Tuesday last the matter had a decidedly depressing influence on the money and stock markets. The form of the new loan was not approved abroad, and selling of securities for European account seemed to increase in volume, supplementing the liquidation and creation of bear stock market contracts on this side. By Wednesday, however, the stock market was able to take a calmer view of the situation, and to better appreciate, not only the reasons which probably governed the administration in deciding upon a popular loan, but on the effects which it now seems likely will ensue. Moreover, the quieting down of the money market, which has been a noticeable feature of the last few days, has aided materially in creating a more confident tone as to the outcome of the situation. It might be mentioned that some apprehension was, in the first instance, felt and expressed lest subscriptions to the loan coming from banks all over the country would diminish their lending power, and thus work to create stringency in loans. As will be noted hereafter, there have been as yet no symptoms of anything of the kind, and this particular fear seems to be of a somewhat illusory nature.

Among the criticisms which found expression both in financial circles and in the press upon the course of the administration, a prominent place was given to the idea that the President and the Secretary of the Treasury had been moved by newspaper criticism, and the demand in some quarters expressed in the press for an opportunity for subscriptions by the people at large. It is true that the Treasury officials were not backward in expressing their disbelief in the efficiency of a popular subscription. The experience of the first two loans made by the present administration were almost conclusive on that point, and it will be remembered that in the first $50,000,000 loan the transaction was only carried through by the assistance of the bankers, who came to the rescue at the last moment. The true solution of this apparent change of purpose by the Treasury seems to be the imminent probability not only that the Senate would have passed the Elkins resolution in favor of the submission of all government loans to popular subscription, but that the House of Representatives would also have joined in such action, thus making it practically impossible for the Treasury to contract with bankers without putting itself in open and direct conflict with Congress.

The form of action which has been taken involves no real change in the outcome. There does not seem to be any widespread popular demand for bonds, and, if there were, the facilities for obtaining gold in any amount by the general public can scarcely be seriously considered. It is significant that, so far as can be learned, the syndicate formed by Mr. Morgan has not been abandoned, and the conclusion at which Wall street has arrived, and which is probably well founded, is that when the thirty days expire this group of bankers, the only visible source at present from which such a large amount of gold can be obtained, will be the successful bidders for the bonds. It is even surmised that under the circumstances the syndicate will feel justified in making its bid for all or none of the entire issue, and that instead of basing the arrangement as to price upon the same terms as in the bond sale of February, 1895, the price it will offer will be somewhat lower. The time which will elapse before the question is definitely settled may involve contingencies which will change the outcome, but for the present the financial markets seem inclined to adopt the view set forth above, and this has at least the beneficial effect of quieting apprehension and creating a better tone in financial and business circles.

MOVEMENT OF PRICES.

It is a matter of easy recollection that prices of staple commodities advanced sharply in many instances during 1895, and that to a considerable extent they reacted again. The middle four months of last year, in general, saw the relatively high range of quotations, which will go far to explain the eccentricity of comparisons of prices at the opening of 1896 when compared with quarterly periods during the preceding calendar year.

Perhaps the most elaborate exhibit which has been compiled of comparative prices of staple products, breadstuffs, live stock, provisions, fresh and dried fruits, hides and leather, raw and manufactured textiles, coal and coke, mineral and vegetable oils, building materials, chemicals and drugs and others, is presented in connection with this article. The quotations are given for quarterly periods during the past five calendar years, and probably few, if any, better outlines of the movement of quotations have thus far been presented.

As contrasted with the quotations on or about January 1, 1895, prices on January 2, 1896, show that 59 of them are higher out of a total of 104, while as compared with April 1 last only 56 are higher, and as compared with July 1, 1895, only 48 are higher. It is interesting, however, to notice that contrasted with quotations on October 1, 1895, prices at the opening of the present year show 51 to be higher than they were three months ago, 3 more than when the comparison is made with a period six months before, notwithstanding the prevalent depression in prices during the past three months.

Among food products which are higher than on April 1, 1895, are wheat, eggs, butter, milk, molasses, mackerel, sugar, peas, apples, peanuts and raisins; as compared with six months ago the list is found to be smaller, consisting of eggs, butter, cheese, mackerel, milk, molasses, sugar, peas, raisins and currents, while as compared with quotations for October 1, 1895, higher prices for food products include those for wheat, flour, beeves, sheep, mutton, eggs, butter, cheese, molasses, mackerel, sugar, rice, peas, apples, cranberries, peanuts, raisins and currents, indicating a much more extensive advance in quotations for staple food commodities during the past three months than had been presumed from some market reports.

Prices for Buenos Ayres hides and hemlock leather are higher than they were nine months ago, but are not higher as compared with quotations six months ago and three months ago.

Quotations for textiles, raw and manufactured, which are higher than they were on April 1 last, include cotton, wool, hemp, silk, flax, print cloths, eastern sheetings, ginghams and southern sheetings, and the list is practically the same for those higher to-day than on July 1 last, the exception being southern sheetings. As contrasted with quotations three months ago those which are higher now include only wool, raw silk and ginghams.

The reaction in the ore and metal markets during late months is plainly indicated by the fact that, whereas prices of only iron ore and quicksilver are higher to-day than on October 1, quotations to-day as contrasted with July 1, 1895, show advances for iron ore, No. 2 southern pig iron, and lead, and as compared with prices on April 1, 1895, present quotations show advances for iron ore, eastern anthracite, No. 2 southern pig, Bessemer pig, steel billets, rails and beams, copper, lead and quicksilver.

Circular prices for bituminous coal, southern and Connellsville coke are higher to-day than on October 1 last and as compared with July 1 last, when an advance for anthracite coal must be added. The like is true when prices are compared with quotations on April 1, 1895. Crude and refined petroleum, castor oil and turpentine are all higher to-day than they were on October 1, but as compared with July 1 the list for those which are higher to-day includes refined petroleum, cottonseed oil, castor oil and turpentine, and as contrasted with prices on April 1, 1895, higher prices to-day are those for crude and refined petroleum, naphtha, castor oil and rosin.

Among building materials, brick, nails, glass, pine, spruce and hemlock are higher than they were three months ago, and the like is true as compared with six months ago, with the exception of hemlock, and a similar statement may be made in reference to nine months ago, with the exception of quotations for brick and for hemlock.

Leading drugs and chemicals have advanced sharply during 1895, as is shown by higher prices for alum, bicarbonate soda, borax, carbolic acid, caustic soda, nitric and sulphuric acids, phosphate rock, alcohol, opium and quinine than on October 1, and this is true also as contrasted with July 1, with the exception of phosphate rock and alcohol. A similar statement may be made with respect to prices nine months ago, excepting with reference to those for phosphate rock, alcohol and opium.

Among miscellaneous commodities tobacco, hay and cottonseed are higher to-day than three months ago, in addition to which hops and rubber are higher than six months ago. As compared with nine months ago quotations for hops, rubber, tobacco, hay and cottonseed are higher.

The foregoing indicates a tendency to maintain late advances in prices of wheat and flour, leading dairy products, sugar, hides only in part, leading textiles, raw and manufactured; coal, petroleum, building materials, drugs and chemicals, tobacco and cottonseed.

Decreases in prices as contrasted with three months ago include several cereals, beef and pork products, coffee, tea and vegetables, hides, cotton, hemp and jute, print cloths, iron, steel, copper, tin, lead and silver, hops and rubber, 44 in number.

In addition to these decreases, a falling off in price contrasted with six months ago is shown in wheat, live cattle, sheep and hogs, salt and rice, crude petroleum and paper, 46 in number; and as compared with nine months ago decreases in addition in quotations for cheese, rice, turpentine and brick, in all 42.

INCREASES OR DECREASES OF PRICES OF COMMODITIES AND LIVE STOCK COMPARED WITH PRECEDING DATES.

January 1, 1896, compared with	January 1 1895.	1894.	1893.	1892.	1891.
Higher	59	45	25	34	24
Same	7	7	4	5	5
Lower	41	55	78	68	78
Total quotations	107	107	107	107	107

Contrasting prices to-day with those five years ago, only 24 are higher and 78 are lower, while as compared with quotations on January 1, 1892, 34 are higher and 68 lower. Those higher now than on January 1, 1891, are:

Beef, bbl.	Hemlock leather.	Spruce.
Ham.	Silk.	Alum.
Cheese.	Pennsylvania coke.	Nitric acid.
Mackerel.	Crude petroleum.	Sulphuric acid.
Molasses.	Refined petroleum.	Alcohol.
Peas.	Naphtha.	Tobacco.
Raisins.	Rosin.	Hay.
S. A. hides.	Nails.	Cottonseed.

Those higher to-day than on January 1, 1892, are as follows:

Beef.	Cotton.	Nails.
Mackerel.	Raw silk.	Glass.
Coffee.	Southern sheetings.	Alum.
Sugar.	Pennsylvania coke.	Carbolic acid.
Molasses.	Crude petroleum.	Nitric acid.
Peas.	Refined petroleum.	Sulphuric acid.
Onions.	Naptha.	Alcohol.
Apples.	Linseed oil.	Opium.
S. A. Hides.	Cottonseed oil.	Quinine.
Hemlock leather.	Castor oil.	Rubber.
Union leather.	Olive oil.	Tobacco.
	Cottonseed.	

The relative advances in quotations of staples to-day as compared with prices on January 1, 1893, 1894 and 1895, respectively, may be shown by the following lists:

Those which are higher now than one, two and three years ago: Mackerel, molasses, sugar, raisins, Buenos Ayres hides, hemlock leather, eastern sheetings, southern pig iron, quicksilver, southern coke, Pennsylvania coke, crude petroleum, refined petroleum, naphtha, rosin, nails, alum, carbolic acid, nitric acid, sulphuric acid, quinine and rubber.

Additional, higher now than two and one years ago: Peas, peanuts, cotton, southern sheetings, silk, anthracite pig iron, copper, lead, turpentine, glass, spruce, alcohol and tobacco.

COMPARATIVE PRICES OF 109 STAPLE ARTICLES, RAW AND MANUFACTURED PRODUCTS, PRODUCE, CATTLE AND MEATS,

AT QUARTERLY INTERVALS, SHOWING FLUCTUATIONS IN QUOTATIONS FROM THE CLOSE OF 1890 TO JANUARY 1, 1896, COVERING THE PERIOD OF RECENT EXTREME DEPRESSION.

STATISTICS OF MONEY IN CIRCULATION.

A considerable net decrease in circulation is shown by the Treasury statistics covering the month of December. The decrease amounted to $14,988,755. The most notable item among the decreases was one of $14,330,000 in currency certificates, the next in importance being a decrease of $4,056,624 in United States notes. There were also decreases of $998,434 in subsidiary silver, $915,066 in national bank notes, and $297,540 in gold certificates. The increases were $4,476,443 in gold coin, $445,214 in standard silver dollars, $220,755 in silver certificates, and $466,447 in Treasury notes of 1890. The statistics showing changes in money and bullion in the Treasury showed a net decrease of $14,623,857. The increases comprised $4,056,624 in United States notes, $671,391 in national bank notes, and $8,773 in silver bullion. The other items showed decreases, the most notable being a decrease of $15,770,-551 in gold bullion.

The following table shows in detail the total stock of money coined or issued, the amount in the Treasury, and the amount in circulation at the beginning of the year:

	General stock, coined or issued.	*In Treasury.*	*Amount in circulation Jan. 1, 1896.*
Gold coin	$568,106,939	$83,378,392	$484,728,547
Standard silver dollars	423,289,629	364,083,702	59,205,927
Subsidiary silver	77,182,006	12,764,321	64,417,685
Gold certificates	50,099,889	163,450	49,936,439
Silver certificates	345,702,564	9,625,856	336,076,648
Treasury notes, act July 14, 1890	137,771,280	22,044,511	115,726,769
United States notes	346,681,016	115,825,143	230,855,873
Currency certificates, act June 8, 1872	34,450,000	2,845,000	31,605,000
National bank notes	213,716,973	7,063,137	206,653,836
Totals	$2,197,000,236	$617,793,512	$1,579,206,724

As compared with the beginning of last year the most marked change is a decrease of nearly $34,000,000 in United States notes. The other decreases comprised nearly $800,-000 in gold coin, over $3,300,000 in gold certificates, over $6,700,000 in Treasury notes of 1890, and $15,400,000 in currency certificates. The increases comprised gains of over $1,300,000 in standard silver dollars, over $1,700,000 in subsidiary silver, nearly $5,000,000 in silver certificates, and over $4,800,000 in national bank notes. The total amount of money in circulation on January 1 amounted to $1,579,206,724, which represents a decrease of over $47,-000,000 as compared with the corresponding date last year. The circulation per capita on January 1 amounted to $22,36, which represents a decrease of 25 cents for the month and of $1.16 as compared with the corresponding date last year. The population figures upon which the above result is predicated estimate the inhabitants of the country at 70,630,000, an increase of about 1,500,000 since January 1, 1895.

INCREASED RAILWAY EARNINGS IN 1895.

Gross railway earnings for December contrast favorably with similar returns in previous months, and, in fact, with the exception of one month (July, 1895), the percentage of increase shown is the largest in 1895. The total earnings of 109 roads for the month of December aggregate $41,778,109, an increase over December, 1894, of 8.8 per cent. The increase shown in November over the corresponding month in the previous year was only 6.3 per cent., and in October 6.8 per cent., so that the favorable character of the December returns as regards gain does not suffer in comparison with October and November, when railroad traffic was at its height.

The increases and decreases from January to December, 1894, compare with similar increases or decreases in previous years as follows:

	1895.	1894.	1893.
January	Dec. .5	Dec. 12.0	Inc. 5.0
February	Dec. 2.3	Dec. 12.0	Dec. 3.4

December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1

The following table shows the gains and losses during each of the past three months and the gains in the entire year 1895 as compared with 1894, in the various groups of roads into which the exhibit is divided:

	October.	*November.*	*December.*	*Twelve months.*
Granger	Inc. 21.6	Inc. 20.9	Inc. 21.3	Inc. 7.6
Central western	Inc. 7.7	Inc. 6.0	Inc. 6.2	Inc. 8.0
Trunk	Inc. 5.8	Inc. 6.0	Inc. 7.3	Inc. 5.0
Eastern	Inc. .4	Inc. .2	Dec. 1.1	Dec. .2
Coal	Dec. 2.2	Inc. 6.4	Inc. 9.9	Inc. 6.3
Southern	Inc. 6.0	Inc. 5.3	Inc. 5.8	Inc. 2.2
Southwestern	Dec. 4.8	Dec. 7.0	Inc. .4	Inc. 2.0
Pacific	Inc. 8.6	Inc. 14.1	Inc. 17.0	Inc. 7.5
Totals, United States	Inc. 6.7	Inc. 6.3	Inc. 8.7	Inc. 5.1
Mexican	Inc. 13.3	Inc. 7.0	Inc. 11.1	Inc. 6.4
Totals	Inc. 6.8	Inc. 6.3	Inc. 8.3	Inc. 5.2

As in previous months, the granger group leads in the percentages of increase over 1894. The Pacific group also has come into increased prominence, as has likewise the coal-road group. Of the 98 railroad systems, embracing 109 roads, into which the December exhibit is divided, 75 show gains and only 23 losses from 1894. The losses are as a general thing very light, except in one group, and that the southwestern, but even in this group the falling off is not nearly so marked as it was in the preceding month, pointing to the fact that an increased corn movement is making up for the falling off in the cotton movement. Heavy increases are, perhaps, less numerous also, but that they are still of good volume is proved by the following table of gains and losses in excess of $100,000:

	Increases.
Chicago, Milwaukee & St. Paul	$561,131
Great Northern	414,582
New York Central	375,856
Chesapeake & Ohio	125,433
Atchison	126,208
Missouri Pacific	198,000
Northern Pacific	185,775
Mexican Central	146,041
Total	$2,133,026
	Decreases.
International & Great Northern	$104,213
Missouri, Kansas & Texas	110,382
Total	$214,595

For the full calendar year earnings received, owing to the early date of the publication, are less numerous than have been wished, but the exhibit is, on the whole, favorable, and certainly contrasts well with the showing a year ago. The total earnings of 110 railroads, with 99,272 miles of track, during the year 1895, were $510,972,332, a gain of 5.2 per cent. over 1894, which year, it will be remembered, showed a decrease of 11 per cent. from 1893, that year, in turn, showing a decrease of 2 per cent. from 1892. For the twelve months' period increases are, of course, less marked than for December. It is an encouraging fact, however, that only one group (and that the one eastern road reported) shows a decrease, all the other groups showing gains, varying from 2 per cent. in the case of the southwestern roads to 8 per cent. in the case of the central western roads. Closely approximating this large gain in the central western group are the gains of 7.6 per cent. by the grangers and of 7.5 per cent. by the Pacific roads.

INDUSTRIAL STOCKS IN 1895.

Speculation in the stock market during the year that has just ended was distinguished by features differing essentially from those which have prevailed in the stock market for some years past. Not the least important of these was the increased prominence given to the railroad share list and to speculative bonds of railway properties. The principal movement of stock prices was a long rise beginning in March and culminating in September. It was based upon the crop situation and the revival of the iron and other industries, with the corresponding actual and prospective improvement in railroad earnings. In this movement the railroad share list held the leading position, while on the decline which followed and lasted down to the very end of the year it was also railroad shares which bore the brunt of the losses in values, and which determined the course of the whole market.

While industrial stocks, so called, have not been the principal element in speculation, it is nevertheless true that their activity was on a very large scale throughout the past year, and that their importance to the market is unabated. It is needless to dwell in this case upon the manipulation and other methods which distinguish some of the most prominent members of the group of corporations to which reference is made. The New York Stock Exchange, as noted some time ago, made a feeble effort to correct the crying evil in the withholding of reports and information as to the financial

condition and operations of some of these companies. A noteworthy and successful instance was afforded by the action of the Exchange committee in the case of the United States Rubber Company. Nevertheless, some of the worst offenders were permitted to continue their course of concealment and mystery—which is altogether inexcusable in public corporations, and for the continuance of which the New York Stock Exchange is directly responsible. An instance of this, it may be noted, was afforded only a few days ago, when the annual meeting of the American Sugar Refining Company was held. There was no report and no balance sheet presented to the meeting given to the public and stockholders, and the flimsy excuse was made that it was impossible to get the company's figures for the year together. As a majority of the stockholders seemed tacitly to approve of the course of the Sugar Company's management by giving their proxies, and as no minority representatives took the trouble to protest, it seems that the organization can continue its policy of silence unchecked, unless, indeed, the Stock Exchange takes the course which the true interests of the public in the matter demand. Unfortunately, there have been recent indications that the Exchange is not overanxious to enter into such a conflict with a concern of such power and speculative importance.

Another and more pleasing phase of the industrial properties is the progress which has been made toward the rehabilitation of other concerns which in the past have been features of the speculative market, and which under their former managements were justly censurable for the frequent display of trust methods and manipulation. The Distilling & Cattle Feeding Company in particular has been thoroughly reorganized. Its financial condition has been made a sure one, and at the same time the new company—the American Spirits Company—is provided with a management which commands every confidence. It is to be hoped that it will justify this esteem, and that the policy of the American Cotton Oil Company, the only large industrial company which furnishes really adequate annual reports, will be imitated. The Chicago Gas organizations have also been taken in hand, and an earnest effort is now on foot to put it on a legal basis which will end the constant attacks on it through the courts, which have rendered it the most volatile of speculative securities. The regeneration of the unfortunate Cordage combination is also in safe hands, though its progress is slow, and the successive downfalls of the company are calculated to make its restoration to a place of prominence in the speculative field very doubtful.

The extreme fluctuations in the industrial shares during 1895, including Western Union and Consolidated Gas stocks under that head, is exhibited in the following tabulation prepared by the *Wall Street Journal:*

Industrials.	*High.*	*Low.*	*Closing.*	*Extreme fluctuations.*	*Clos'g over lowest.*
Sugar	121⅜	86½	102⅞	34⅞	16⅜
Tobacco	117	63	77½	54	14½
Chicago Gas	78¼	49⅞	65⅜	28¾	15½
Distilling	25⅛	8	16⅞	17½	8⅞
Consolidated Gas	161½	126	148½	35½	22½
General Electric	41	20	26	21	6
Lead	38	21	25½	17	4½
Leather pref.	97¾	58	63⅞	39¾	5⅞
Rubber	48	21	26⅜	27	5⅜
Tennessee Coal	46⅜	13¼	28½	23⅞	15¼
Western Union	95⅜	82½	85⅝	12⅞	3⅛

It will be seen that the group as a whole closed the year at prices in some cases considerably above the lowest figures. The violence of these fluctuations is, however, apparent as well as its irregularity, and reinforces the demand that securities which take such a part in the transactions of the market should not be involved in the doubt which the general absence of information as to their position and finances creates.

BANK CLEARINGS FOR 1895.

In addition to the elaborate table of bank clearings totals for the calendar year 1895, published last week, it has been thought advisable to present the following supplementary list of total clearings for last year, arranged in the order of size, with comparisons for the preceding year:

Clearing Houses.	*Rank in 1895.*	1895.	1894.	*Rank in 1894.*	*Inc. com. with 1894.*	*Dec. com. with 1894.*
New York	1	$29,841,796,924	$24,387,807,020	1	22.3	....
Boston	2	4,757,684,594	4,148,000,182	3	14.6	....

† Not included. Contain other items than clearings.

This exhibit comprises totals from 75 cities throughout the United States, in addition to which are those from 3 Texas towns, not included for reasons explained in a footnote. Among the 75 for which comparative totals are given and counted, the only cities whose clearings record shows a decrease in 1895 as compared with the total in the year 1894 are Omaha, St. Joseph, Worcester, Mass.; Salt Lake City, Des Moines, Tacoma, Sioux City, Seattle, Topeka, Lexington, Ky.; Lincoln, Neb.; Jacksonville, Fla.; Sioux Falls, S. D.; Hastings and Fremont, Neb.—15 in all, or 20 per cent. of the total number of cities considered. Among the cities reporting an annual volume of clearings amounting to $100,000,000 or more last year, Chicago dropped from second place in 1894 to third in rank last year. Philadelphia stood fourth in each of the years named; St. Louis, fifth; San Francisco, seventh; Cincinnati, ninth; Kansas City, tenth; New Orleans, eleventh; Buffalo, nineteenth; Indianapolis, twentieth; Columbus, twenty-second; Denver, twenty-third; Dallas, twenty-fourth; Hartford, twenty-seventh, and Peoria, twenty-eighth. Pittsburgh, which stood eighth in order two years ago, is now sixth, but Baltimore, which was sixth in rank in 1894, stood eighth in line at the close of 1895. Minneapolis has improved its position by moving up from thirteenth to twelfth, and Detroit has advanced one place to thirteenth, while Louisville, which stood twelfth in 1894, is fourteenth in order. Cleveland, which was sixteenth two years ago, now stands fifteenth in line. Providence has made a similar gain, standing now in sixteenth place, and Milwaukee a like improvement, ranking seventeenth. St. Paul jumped from twenty-first to eighteenth place, Savannah one place to twenty-fifth, and Richmond one to twenty-sixth, while Omaha dropped back from fifteenth to twenty-first in rank.

THE COAL TRADE SITUATION.

Reports continue to make their appearance that a combination of anthracite coal producers and carriers is within the realm of possibility during 1896. In fact, there were intimations in circulation this very week that a meeting of the coal road presidents was to be held within the ensuing fortnight, at which all parties would agree to a basis of settlement and end the overproduction of the mineral and the unremunerative prices which it occasions. The fact that this was coupled with the further statement that the prospective truce was to be effected by the 16th of the current month may serve to throw some light on the reason, if not on the origin, of such reports. The date in question was that fixed for the payment of the first installment of assessments on the Reading Railroad Company's stock and junior bonds. Apart from the general declines in stock market values, the drop in the quotations for Reading stock and preference incomes has been so severe that one is forced to conclude the owners of these securities are liquidating their holdings rather than pay the 20 per cent. assessments. Under these circumstances the underwriting syndicate may be called upon to pay assessments upon a much larger amount of Reading stock and junior bonds than was originally intended, and it would be quite natural that reports which tend to encourage the purchasers of the securities in question at prices which are next to nothing to come forward with the amounts of the assessments should make their appearance in Wall street. The news that an extension of sixty days has been granted for the payment of Reading assessments where the holders of the securities assessed deposit them promptly, points to the conclusion that encouragement of a positive kind was required at this juncture. A coal trade settlement, involving an advance in prices for anthracite and the allotment of a satisfactory percentage of the total production to the Reading companies, would be an admirable thing for the latter. While it would be unfair to conclude that the leading people engaged in the Reading reorganization scheme would originate such reports, it is quite natural that the street should give them circulation. That they do not receive credence in well informed circles is amply proved by the lack of response in the quotations. In fact, viewing the general situation of the money and securities markets, to say nothing of the continued demoralization of the coal trade itself, there is some reason for the indefinite apprehension which prevailed in regard to the fate of the reorganization scheme, though the extension of the time for payment holds the matter over and affords opportunity for the reorganizers to display their acknowledged skill in such arrangements.

The coal trade at the close of 1895 was in a remarkable condition. While the companies no longer publish official statistics of the output, it is understood that it amounted in 1895 to 43,000,000 tons, more or less, against 41,391,199 in 1894 and 43,089,536 in 1893. The absence of activity has been one of the most marked characteristics of the situation, and, as a consequence, the stocks in the hands of producers have tended steadily to increase. The average prices have been necessarily lower than in 1894. Taking stove-size anthracite as the example, the highest price was in December, $3.45 per ton, and the lowest, $2.75 a ton, in August, the average being $3.08. In 1894 the highest price was in January, $4.15, and the lowest in December, $3.30, the average for the year being $3.60 per ton, as compared with the above average of $3.08 in 1895. In 1893, however, the average price for stove-size at tide water was $4.19, and in 1892 $4.09. In other words, the net price last year was 60c. per ton on the average below the level of 1894 quotations, and over $1 less per ton than the prices in either 1893 or 1892. A further comparison may also be presented between the current prices for various sizes, tide water, as now quoted, against those current a year ago:

	Per ton—		
	Stove.	*Egg.*	*Broken*
1895	$3.35	$3.45	$3.60
1896	3.25	3.15	2.90

This condition of the trade, which, in spite of the rumors of an arrangement between the companies, seems to be irremediable, moves a leading authority on the subject, the New York *Engineering and Mining Journal*, to say: "Probably there is not another industry involving the very existence of many thousands of people and a product that runs beyond the $100,000,000 mark which has been managed with such an apparent disregard for sound business principles. * * * It has seemed to some officials that if they could manage to sell a certain number of tons of coal per month they had done all that was required of them. To others, that if the traffic statements of their particular road showed certain figures they had been equal to the situation. Still others have considered that if the stock of their companies was quoted on the Stock Exchange at a certain figure—generally far above its intrinsic worth—a great and praiseworthy feat of financiering had been accomplished. It would thus seem that the trade lacks men who can demonstrate the ability to rise superior to the relative pettiness of the present; that is, men who can grasp the situation, and whose vision can take in more than two degrees of the business horizon."

IRON AND STEEL PRICES IN 1895.

The beginning of the year 1895 found the iron industry in the depths of depression, with prices at the lowest level that had been reached; the close of the year left the industry in an unsettled condition, representing the reaction from an unprecedented activity in production and an abnormal inflation of prices. Between the beginning and

the end of 1895 there occurred the greatest boom in iron and steel that the world has ever known. During the tremendous boom of 1879–80 the advance in prices was relatively and absolutely greater than during 1895, but the increase in production during the past year was far greater than during the trade revival of fifteen years ago. The production of pig iron increased from 2,741,853 tons in 1879 to 3,835,191 tons in 1880, while the recent boom brought the production from 6,657,388 tons in 1894 to about 9,400,000 tons in 1895.

While the activity in the iron and steel trade during the past year has been due to the same causes that have produced a general revival in business, the origin of the upward movement in iron and steel prices can be definitely located in the advance in wages by the H. C. Frick Coke Company, which was announced late in March and went into effect on April 1. The immediate effect of this increase in wages was the advance in the circular price of coke from $1 to $1.35 per ton, which forced an advance in pig iron and inaugurated the general upward movement in the iron trade. Had it not been for this bold stroke of the Carnegie interests, the improvement in the iron trade would undoubtedly have kept the slower pace of the general trade revival.

April 1 was virtually the starting point of the boom of 1895, but it was not until a full month later that the market began to show in marked degree the influence of the revival of activity. From the middle of May the advance in prices was rapid and continuous, until the climax was reached in the middle of September. Then began the decline, which has continued until the present date, but which has not yet carried prices to the low level of a year ago. Bessemer pig iron and Bessemer steel billets, which are the largest factors in the trade, have shown the greatest activity and the largest range of fluctuations in price. It is worthy of note, too, that the rise and fall of the prices of these two crude products have been due to the influence of supply and demand, rather than to changes in the elements of cost in the production of these materials. Although the extreme range in the price of Bessemer pig iron during the year was about $8 per ton, the difference between the actual costs of manufacture at the highest and lowest points was probably not over $1 per ton. The largest item of increase in cost was the advance in the price of coke from an actual selling price of about 90c. to $1.60 per ton, representing an increase of about 70c. per ton in the cost of making pig iron. In addition to this, the cost of manufacture was slightly increased by small advances in wages and freight rates. Although the prices of Lake Superior ores have advanced nominally, by far the greater part of Bessemer pig iron made during the past year was produced from ores bought last spring at the lowest prices ever known.

The extreme range of prices of the principal iron and steel products during the year 1895 is shown by the following table of highest and lowest market quotations:

Articles.	Highest.	Lowest.
Bessemer pig iron at Pittsburgh, gross ton	$17.25	$9.85
Bessemer steel billets at Pittsburgh, gross ton	25.00	14.75
Gray forge pig iron at Pittsburgh, gross ton	13.40	8.95
No. 1 anthracite pig iron at Philadelphia, gross ton	14.50	12.00
Common bars at Pittsburgh, per 100 lbs	1.40	.90
Steel rails at Pennsylvania mills, gross ton	28.00	22.00
Beams and channels at Pittsburgh, per 100 lbs	1.60	1.20
Wire nails at Pittsburgh, per keg	2.25	.85
Galvanized barb wire, at Pittsburgh, per 100 lbs.	2.70	1.80
Coke Bessemer tinplates, I. C., 14x20, per box of 108 lbs., at New York	4.00	3.80
Coke Bessemer tinplates, I. C., 14x20, per box of 100 lbs.	3.65	3.45

The very large advances in the prices of steel rails, wire nails and barb wire represent the arbitrary action of the combinations by which the production of the articles has been controlled. The increase of $6 per ton in the price of steel rails was made in the face of an ordinary demand for rails, incident to the smallest construction of new railroad mileage that has taken place in the past thirty years. The advance of 140 per cent. in the price of wire nails was due to the formation of a combination which includes practically all the manufacturers in this line, and a similar organization accomplished parallel results for the cut-nail trade. The creation of a strong combination of manufacturers made possible for a time the maintenance of an arbitrarily high price for barb wire, but a recent break in the organization has restored the price nearly to the lowest level that existed prior to the beginning of the trade revival.

For those manufacturers of pig iron and Bessemer steel who control the production of their own materials, or who have been protected by favorable contracts for ore and fuel, the trade of the past year must have yielded extraordinary profits.

The accompanying table of prices of the leading iron and steel products has been compiled mainly from the weekly market reports of the *Iron Age*, and it shows in compact form the course of the markets throughout the entire year.

THE FORTY-FIFTH STAR.

Another state was admitted to the Union on Saturday, when President Cleveland signed the proclamation declaring that the necessary conditions for admission had been complied with by Utah. The enabling act providing for the election of delegates to a constitutional convention was approved on July 16, 1894, the delegates elected met in March, 1895, and the constitution adopted by them was approved by a vote of the people at the election held in November last. Half a dozen unsuccessful applications had been previously made since the organization of the territory, in 1850.

Statistics of the wealth of the state show that it holds a respectable position among the more recently admitted states, and surpasses several of the older ones in point of the value of its property. According to figures given in the inaugural address of Governor Wells on Monday last, the assessed valuation of property in Utah in 1895 was $97,983,525, and the total export value of mineral product in that year was $8,312,-352. Computing the gold and silver at their mint valuation and other metals at their value at the seaboard would increase the value of Utah's mineral product to $14,519,959. There are 19,816 farms in Utah, and 17,684 of them are absolutely free of incumbrance. The total acreage irrigated is 417,455 acres. The number of sheep owned in Utah in 1894 was 2,422,802, valued at $3,686,134, and yielding a wool clip in that year of 12,119,763 pounds, valued at shipping points at $864,260. The value of agricultural products in 1894 was $51,863,120, and that of the output of ranch and range, $1,259,566. The number of industrial concerns in 1894 was 880, employing 5,054 laborers, paying in wages $2,275,-118, representing a total capital invested of $5,476,246, and turning out a product of $6,678,118 annually. The population was estimated by the governor at 247,324.

Utah is the forty-fifth member of the great sisterhood of states. Of the admitted states only three were let in before the beginning of the present century, namely, Vermont in 1791, Kentucky in 1792 and Tennessee in 1796. In the course of the first decade of the century only one state was admitted, namely, Ohio, in 1802. The next decade witnessed the admission of five states, namely, Louisiana in 1812, Indiana in 1816, Mississippi in 1817, Illinois in 1818 and Alabama in 1819. The next decade saw the entrance of only two states, namely, Maine in 1820 and Missouri in 1821. During the following decade only two states were admitted, namely, Arkansas in 1836 and Michigan in 1837. In the course of the next ten years four states were admitted, namely, Florida and Texas in 1845, Iowa in 1846 and Wisconsin in 1848. In the following decade three states were admitted, namely, California in 1850, Minnesota in 1858 and Oregon in 1859. The next ten years saw the admission of four states, viz., Kansas in 1861, West Virginia in 1863, Nevada in 1864 and Nebraska in 1867. From that time until the year 1887 but one state was admitted, namely, Colorado, in 1876. In the year 1889 alone, however, the four states of North Dakota, South Dakota, Montana and Washington were admitted, and in the following year Idaho and Wyoming became members of the Union. Within the boundary of the United States there now remain but four territories to be admitted, namely, New Mexico, Arizona, Indian Territory and Oklahoma, and it seems likely that some at least of these will take on the status of statehood in the near future.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

[East of Rocky Mountains.]

CURRENT BUSINESS NEWS.

Industrial.

Eight hundred members of the Stonecutters' Union, employed in twenty-six stoneyards in Chicago, went out on strike this week. They claim that the owners employ laborers on stone-cutting machines, working from 16 to 24 hours a day. The union demands that the machines be worked only eight hours a day and that union cutters be employed to operate them.

A dispatch from Pierre, S. D., says that within a few months there have been organized 20 new companies, with a combined capital stock of $20,000,000, for the purpose of developing the Black Hills gold-mining properties.

The strike at the Western New York & Pennsylvania Railroad shops, in Buffalo, has been declared off, a compromise being agreed upon.

The Cleveland *Iron Trade Review* says: "It will be agreed that 1896, from all indications to-day, will not show any return of the prostration of 1893 and 1894. That the year will show a demand equal to that of 1895, without the violent fluctuations in values marking the past year, is not improbable.

The bituminous coal miners of Indiana decided on Wednesday to demand an advance in the mining scale from 60 to 66 cents, to take effect April 1, the date when the Pittsburgh district price is to be advanced from 64 to 70 cents. The operators will refuse to grant the advance.

The Tennessee Coal, Iron & Railroad Company has given notice that the wages of its five thousand coal miners will be reduced 5c. per ton. "This is in accordance with the sliding wage scale contract in effect between the company and its men, whereby 37½c. is to be paid for each ton of coal mined when iron is $8.50 or less per ton, and an advance of 2½c. per ton in wages for each rise of 50c. per ton in iron prices. Last summer, when iron rose to $10.25, wages were advanced 7½c. Iron has recently fallen to $9, hence the wage reduction."

Commercial.

A Norfolk dispatch says "the Peanut Trust, known as the Virginia Peanut Association, has decided to wind up its affairs. It was found impossible to control the buying price of the nuts."

The Chattanooga *Tradesman* says: "In the cotton-growing sections the times are easy, and a good deal of cotton remains unsold, as growers look for a return of higher prices. There is some improvement in the lumber trade, and exports from Texas and other gulf ports are growing larger. Atlantic coast and interior point lumber manufacturers are selling a good deal of lumber, but say that existing prices are too low to give them a fair profit. At this time of the year a large trade is not looked for."

The reduction of lake freights since 1870 has been from $5.60 per ton of iron contents in the ore to $1.70, a saving of $3.90 per ton of pig, besides a further saving on rail freights from the lake port to the interior furnace.

The Secretary of Agriculture has under consideration an application for the opening of Richford, Vt., as a new port of entry, and of Boston as a port of export, for the transportation of Canadian cattle.

The lumber manufacturers of Alabama, Mississippi, Arkansas and Missouri met in Birmingham, Ala., this week, and reached an agreement as to uniform prices, gauges, etc.

In these four leading articles sales at the New York Produce Exchange in the years indicated were as follows:

	1895.	1894.	1893.
Barley, bushels	3,150,000	1,900,000	1,252,000
Pork, barrels	79,300	66,950	63,650
Lard, tierces	114,529	123,793	133,227
Tallow, pounds	15,164,500	12,401,500	13,873,500

Total transactions at the New York Produce Exchange in breadstuffs for three calendar years have been as follows:

	1895.	1894.	1893.
Wheat flour, barrels	5,556,400	5,001,000	5,485,100
Wheat, bushels	1,665,232,000	1,251,706,000	1,052,008,000
Corn, bushels	147,785,000	132,410,000	177,428,000
Oats, bushels	57,666,000	69,505,000	80,520,000

The president of the Textile Manufacturers' Association of the South and West has issued a circular stating that the National Association of Wool Manufacturers will hold their annual meeting in Chicago on the 21st inst.

A dispatch from Ishpeming, Mich., says prices of "standard Marquette" and Gogebic Bessemer will be advanced $1.10 over last year's figures.

A Wheeling, W. Va., dispatch says: "The seven leading lantern manufacturers of the country, located in Wheeling, Tiffin, Detroit, Mich.; Warren, Ohio; Rochester, Syracuse and New York city, controlling the trade of the United States, have formed a close combination to regulate the output and prices, and the combination went into active effect on the 1st inst. The advance in goods will average 33 per cent. Orders for goods will be apportioned among the manufacturers."

The annual convention of the National Morocco Manufacturers' Association was held in Wilmington, Del. About 100 members were present. President Henry Burk, of Philadelphia, was in the chair. A long discussion took place on the subject of goat skins and tanned stock as disposed of to glazed kid manufacturers after arrival in this country.

Financial.

The following securities were sold at auction at New York this week:

20 Shares German Exchange Bank	300
89 Shares Mechanics' National Bank	192½
40 Shares National Bank of the Republic	151
22 Shares Title Guarantee and Trust Company	270
24 Shares Browne Diamond Cutting Company	1
$3,000 Scioto Water Co. 1st mtge. 20-year 6 p. c. bonds	$700

The Chicago, St. Paul, Minneapolis & Omaha Railroad Company has declared a semi-annual dividend of 3½ per cent., payable February 20.

The Henderson Bridge Company has declared a dividend of 2½ per cent., payable February 1.

The Central Railroad Company of New Jersey has declared a quarterly dividend of 1¼ per cent., payable February 1.

The Maryland Coal Company has declared a semi-annual dividend of 2½ per cent. on its preferred stock, payable January 15.

The *Engineering and Mining Journal* computes that the value of all mineral production in the United States last year was $698,000,000, against $568,000,000 in 1894. The value of metals produced was $210,997,020, against $194,095,622 in 1894. The large items for 1895 were pig iron $112,159,272, which is a gain of forty millions over 1894.

Superintendent Charles M. Preston, of the State Banking Department, has filed his resignation, to take effect on the appointment of his successor. Mr. Preston is president of the Equitable Securities Company, of New York city, which will shortly come within the supervision of the State Banking Department.

A dispatch to the New York *Post* from Denver says that the gold product of Colorado for 1895 will be $17,340,495. This is nearly $2,500,000 greater than previous reports had estimated the yield of that state.

The following annual meetings are announced:

H. B. Claflin Company	January 11
Western New York & Pennsylvania	January 13
Chicago City Railway	January 15
Indiana, Illinois & Iowa	January 15
Laclede Gas Company	January 20

An increase of business in all departments is reported by the New York Consolidated Stock and Petroleum Exchange for 1895, as shown by the following figures:

	1895.	1894.
Shares of stock	60,306,410	48,518,030
Bonds	$18,299,000	$21,526,000
Mining shares	672,050	348,070
Petroleum, barrels	....	1,348,000
Wheat, bushels	790,940,000	444,062,000

It is estimated that the copper output last year was worth nearly $39,000,000, or about $5,000,000 more than the year before, and silver was less than $27,000,000, a decrease of about $5,000,000; lead about $10,000,000 for each of the years; coal, $212,000,000, an increase of 25,000,000 tons and $28,000,000, and iron ore 18,000,000 tons, worth $31,500,000, an increase of more than 50 per cent. in quantity and more than 100 per cent. in price value. "The world's production of gold probably exceeded $200,000,000."

Railroads.

The Pittsburgh, Cincinnati, Chicago & St. Louis Railroad Company has declared a dividend of 2 per cent. on its preferred stock, payable January 27.

The Louisville & Nashville Railroad Company reports for the six months ending December 31:

	1895.	1894.	*Changes.*	
Gross earnings	$10,712,225	$10,186,878	Inc.	$525,347
Operating expenses	6,840,423	6,109,095	Inc.	731,328
Net earnings	$3,871,802	$4,077,783	Dec.	$205,981
Fixed charges	2,834,170	2,820,766	Inc.	13,404
Balance	$1,037,632	$1,257,017	Dec.	$219,385
Other income	180,176	179,844	Inc.	332
Total income	$1,217,808	$1,433,861	Dec.	$219,053
Loss on leases	131,332	1,036,427	Dec.	905,095
Surplus	$1,086,476	$400,434	Inc.	$686,042

The formation of a western freight pool by the railroads in the Western Freight Association has been practically assured.

The board of managers of the Delaware & Hudson Canal Company, at a meeting held on Wednesday, decided to pay during the current year quarterly dividends upon the stock of the company at the rate of 7 per cent. per annum. This action was based upon the fact that the company earned last year over and above all charges about 6½ per cent. upon its stock. The surplus earnings of previous years will be drawn upon to the extent of about ½ to 1 per cent. upon the capital stock, or less than $200,000, to pay the dividends declared for the present calendar year.

According to a San Francisco dispatch the transcontinental railroads have agreed to advance eastbound freight rates.

The all-rail east-bound shipments of dead freight from Chicago last week were 94,499 tons, against 75,881 tons the previous week and 32,636 tons the corresponding week of the previous year.

A Chicago dispatch says that the passenger and freight departments of the Central Traffic Association are to be reorganized as separate associations to deal with local competitive business. The through business of the roads concerned is controlled by the "joint traffic agreement."

Receivers were appointed at Galveston, Tex., on Tuesday for the Galveston, Laporte & Houston Railway.

The British ambassador and first secretary of the British legation have had a conference with Postmaster-General Wilson, at which the establishment of a parcels-post convention between the United States and Great Britain was urged. The ambassador was assured by Mr. Wilson that the matter would be considered as soon as possible.

The British Board of Trade returns for December show an increase in imports of £3,900,000 and an increase in exports of £1,680,000 during that month as compared with December, 1894.

F. H. Hoyt, who has been the secretary of the Trunk Line Association for several years, has been elected also secretary of the board of managers of the Joint Traffic Association.

The New York State Board of Railroad Commissioners submitted its report for the year 1895 to the legislature Thursday night. The board states that the summary of the last year affords much ground for encouragement. The increase in freight traffic has been general. The passenger traffic on steam roads has not increased, and the conclusion reached from these facts is that, while business is better, it is not enough better to warrant a return to normal conditions in travel. The anticipation of continued improvement is warranted by the outlook.

The Philadelphia *Press* says "the year 1895 was a prosperous one for the Pennsylvania Railroad, as is generally known. The company, however, is in a far better position than is imagined even by those who know of its success. It is not improbable that the cash balances of the company in this country and London at this time are more than $10,000,000."

Capital stock of New York state railroads shows a decrease this year of $12,812,614; cost of road and equipment, decrease, $19,672,129; funded debt, decrease, $1,264,021; unfunded debt, increase, $13,941,656. The changes in capital stock, funded debt and cost of road and equipment are due to reorganizations. The percentage of dividends declared on capital stock is 2.63, against 2.69 in 1894.

The report on the financial operations of New York state railroads is for the year ended on June 30, 1895. The increase of earnings for 1895 was $1,241,039; decrease in operating expenses, $702,970; increase in net earnings from operation, $1,944,010. The decrease in net earnings for 1894 was $4,364,171, while the decrease in income from operation that year was $10,399,511, showing that $6,035,340 of the loss was made up by a reduction in operating expenses, which have, therefore, been reduced nearly $7,000,000 since June 30, 1893.

The decrease in number of passengers carried on New York state railroads during 1895 was 1,262,175, and in the number carried one mile, 711,863,058. This is, in part, accounted for by the World's Fair traffic reported for the year ending on June 30, 1894. Freight business, on the other hand, shows an increase of 1,475,777,099 in the number of tons carried one mile.

Legislative.

Senator Cullom has introduced two bills, one for the construction of two steam revenue cutters for service on the great lakes, and the other for two similar vessels for service on the Pacific coast. The cost of the cutters for the lakes is limited to $200,000 each, and the others to $400,000 each.

Senator Chandler has introduced a bill providing for a popular loan by the issue of postal savings notes.

The House Judiciary Committee has reported favorably a resolution calling upon the Attorney-General for information as to what steps, if any, he has taken to enforce the laws of the United States against trusts, combinations and conspiracies, and what further legislation, if any, is needed in his opinion to protect the people against the same.

An effort is to be made to secure legislation by which all record of the income tax returns which relate to private business may be erased from the records of the government. Mr. Bartlett, of New York, is to introduce a bill to direct the commissioner of internal revenue to return to the persons or corporations who filed them upon their demand. The bill will also require the destruction of all such lists left on file and all records of the returns in the department, and all records and returns in the possession of deputy collectors.

The Ways and Means Committee of the House of Representatives has still under way its inquiry into the administrative features of the tariff law.

Miscellaneous.

As nearly as has been ascertained, 275,000 lives were lost in 1895 by battle, railroad accidents and various other disasters in this and other countries. The loss of life at sea has been estimated at 4,000, and on inland waters at 148. These losses in 1894 reached nearly 7,000.

In the United States 3,600 persons lost their lives by railroad accidents last year, and 2,610 were seriously injured. The fatalities from fires were 1,850, explosions 950, falling buildings 730, mines 730, cyclones and storms 410, and lightning 300.

Loss of life by battle last year, the Chicago *Tribune* says, "cannot be closely estimated, but it is believed that it reached 157,986 in Armenia, China, Africa, India, Cuba and South America during the year."

The sums contributed to charities, colleges, art galleries, libraries, etc., in the United States during the last year, the Chicago *Tribune* says, "were largely in excess of the contributions to such purposes during the preceding year. In 1895 the total was $28,943,549, as compared with $19,967,116 in 1894."

The total amount donated to colleges and universities last year was $12,379,820, charities $5,745,670, churches $2,089,150, museums and art galleries $1,724,500, libraries $532,433, and other institutions $6,471,976.

William T. Baker has been reëlected president of the Chicago Board of Trade.

The Chicago *Tribune* says: "Of the 171 who fell victims to the methods of Judge Lynch in the United States in 1895, 112 were negroes and 9 were women. One hundred and forty-four lynchings occurred in the south and 25 in the north."

The lynching record has been improving since 1892, when there were 235 occurrences of this nature. In 1894 there were 190, and last year the figures were 171.

The number of legal executions last year was 132, the same as in 1894. Of these 89 took place in the southern and 43 in the northern states.

Secretary Herbert has accepted the ram Katahdin in behalf of the government, and it is expected that the Katahdin will be placed in commission in about ten days.

A statehood convention which met in Oklahoma city on the 8th instant adjourned sine die before a permanent organization was effected. This action was the result of rivalry between the principal cities as to which should be the capital of the territory.

Three territorial delegates, Messrs. Flynn, of Oklahoma, Murphy, of Arizona, and Catron, of New Mexico, "are waging vigorous campaigns in Congress to secure favorable action on their bills for the admission of their respective territories to statehood."

St. Paul, Minn., and Milwaukee, Wis., are taking steps to stop the smoke nuisance. The former has adopted a smoke ordinance copied, after that of Chicago, and "prosecutions are to be begun under it at once. The engineer of every smokestack found smoking will be arrested, tried, and if found guilty fined. There is to be no let up until the city is completely rid of the smoke nuisance."

Foreign.

The London *Times* says: "There is reason to believe that Her Majesty's government have, with the object of stamping out cattle disease, resolved to introduce in the coming session of Parliament a bill requiring the slaughter at the ports of debarkation of all foreign cattle landed in this country."

The Vladivostock correspondent of the *Novoe Vremya* telegraphs that Japan has offered to give Russia free and unlimited anchorage for her warships in all the harbors of Japan. It is assumed that the intention is to divert Russia from acquiring a harbor in Corea.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Carrier—Connecting Lines—Delivery.

In the case of Foy vs. Chicago, Milwaukee & St. Paul Railway Company, recently decided by the Supreme Court of Minnesota, it appeared that the defendant, the last of several connecting common carriers, delivered the goods at their destination to a person other than the consignee by reason of wrong directions given him by one of the prior connecting carriers, without authority of either the consignor or consignee, and without the surrender of the bill of lading, issued by the initial carrier. The court held that such prior carrier did not have apparent authority so to order the goods delivered to such third person, and the defendant is liable for conversion of the goods.

Railway—Rights of Way.

The Supreme Court of Indiana held, in the recent case of Wysing et al. vs. Lake Erie & Western Railway Company, that a railway company is not driven to take property by main force from its rightful owners; that the law provides the means by which property may be acquired for track purposes; that where a right of way is given to a railway company for the purpose of a siding or switch to enable the grantors shipping facilities near their factory, it cannot, neither can its successors, turn the right of way or switch into use for a main line against the consent of the grantors, no matter how slight the distance of removal, and that a railway company, under contract, has not the right to move its side track upon and appropriate appellant's land without compensation, nor has it the right to remove a transfer track by changing it into a main line and thus deprive appellants of their consideration under the contract.

Bank—Partnership—Capital.

The Supreme Court of Georgia held, in the recent case of Brobston vs. Penniman, that where the president and cashier of a bank, being also members of a partnership composed of themselves and another person, to the capital of which they had under the partnership articles agreed to contribute a given sum, without the knowledge or consent of that person executed and delivered to the bank a promissory note in the name of the partnership for the purpose of raising the money they had so agreed to put into the partnership business, although the money obtained from the bank upon such note was, in fact, used for the purpose stated, the transaction was one for the private benefit alone of the two members of the partnership who thus raised the money, and in no sense for the benefit of the partnership itself, and that under these circumstances the knowledge of the president and cashier of the facts above mentioned was the knowledge of the bank itself, and neither the partnership, as such, nor the remaining member was liable to the bank upon the note in question.

Bank—Shareholders—Liability.

The United States Circuit Court of Appeals at St. Louis held, in the case of Hayden vs. Stuart et al., that the capital, the unpaid subscriptions to the capital stock, and the liability of the holders of stock that is paid for, to pay an additional amount equal to the par value of their stock under section 5151 Revised Statutes, are all parts of a trust estate, sacredly pledged for the security of the creditors of a national banking association organized under the national banking act; that the willful destruction or diminution of any part of this trust estate, or the diversion of the proceeds of any of it from the creditors of the bank, is a fraud upon these creditors, and subjects its perpetrator to a suit by them or their legal representatives for proper relief, and that a shareholder of a national banking association who, for the purpose of escaping his individual liability, under section 5151 of the Revised Statutes, transfers his shares in a failing bank to one who, for any reason, is unable to respond as promptly as he was to the liability their ownership imposes, commits a fraud upon the creditors of the bank, renders his transfer voidable at their election, and leaves himself subject to the individual liability imposed by the ownership of the stock, if the creditors elect to pursue him.

Railroad—Accident—Negligence.

The case of Eugene et al. vs. Pennsylvania Railroad Company, recently decided by Judge Baker of the United States Circuit Court at Indianapolis, arose on an action for damages for injuries received through the negligence of the company in employing and retaining in its service a drunken and careless engineer. The company answered, maintaining that the plaintiff could not recover damages, as he had accepted benefits to the amount of $660 from the defendant's voluntary relief department, the acceptance of which operated as a release of all claims for damages against the company. The plaintiff filed a demurrer to this answer, which demurrer was overruled by the court. In his opinion Judge Baker said: "As a general proposition it is unquestionably true that a railroad company cannot relieve itself from the responsibility to an employee for an injury resulting from its own negligence by any contract entered into for that purpose before the happening of the injury, and if the contract under consideration is of that character it must be held to be invalid. The plaintiff agreed that when an injury happened to him he would then determine whether he would accept the benefits secured to him by the contract, or waive them and retain his right of action for damages."

Partnership—Notes—Exchange.

The Supreme Court of Georgia held, in the recent case of Morris et al. vs. Maddox, that it being within the scope of the legitimate business of a mercantile partnership to raise money by making and negotiating promissory notes, a member thereof has the power to exchange a promissory note of the partnership for the promissory note of another of like amount, the proceeds of which are intended for use in carrying on the partnership business; that where a case turned largely upon a material issue of facts concerning which the parties were seriously at variance, and there was present at the trial a witness who manifestly had full knowledge as to the truth of the issue, and who had been sworn at the instance of the plaintiff, but not examined, it was grossly improper for the plaintiff's counsel, in the concluding argument of the case, to state to the jury that it was unnecessary to examine this witness, because if he had been examined he would have sworn to certain things, the counsel at the same time undertaking to inform the jury what the testimony of the witness would have been, and it being apparent that such testimony, if true, would have been fatal to the defendant's case; and that in the case at bar, it being one in which not only an issue of the nature above indicated, but other issues of considerable importance were closely contested, the misconduct of the plaintiff's counsel was cause for a new trial, and although the judge rebuked the counsel and instructed the jury to disregard his improper statements, this was not in this instance a sufficient correction of the injury done to the defendant.

Mechanic's Lien—Contractor—Surety.

The Court of Appeals of the District of Columbia held, in the recent case of Herrell et al. vs. Donovan, reported in the Chicago *Legal News*, that where a sub-contractor having a contract to do certain work in the construction of a building, in order to procure material gives to a material man an order on the principal contractor for payment, which is accepted by the principal contractor, and the materials are furnished, such order and its acceptance do not constitute the material man a sub-contractor in immediate contractural relation with the principal contractor so as to entitle him to claim a mechanic's lien on the property; that the remedy of the material man is against the sub-contractor on the primary contract for materials or the principal contractor on the acceptance; that a surety, who is also a sub-contractor, on the bond of a contractor which requires the discharge of all liens on the property before final payment, is precluded from filing any lien as sub-contractor unless in some way discharged from his contract of suretyship; that partial payments as the work progresses, made on the certificate of the architect that work they represented had been done, do not prejudice the surety, and do not amount to a discharge, especially where, by requesting payment to the contractor of a balance in full of the sixth installment of the contract price, the surety ratifies all the previous payments; that the lien given by the mechanic's lien law, while independent of contract, cannot arise without a preëxisting contract; that only a contractor or sub-contractor can have a lien; and this necessarily means that there must be a contract before there can be a lien; that the contract between the owner and the contractor is the chart by which, with regard to the owner of the property, not only the contractor, but all sub-contractors, are bound, and contains the limitations under and with reference to which the right of lien may be exercised, and that the sub-contractor can have no greater right against the owner than the contractor himself, except, perhaps, that the contractor may stipulate not to have recourse to his statutory lien, but may not stipulate touching the right of the sub-contractor in that regard.

BUSINESS NOTES.

Domestic Copper Production.

The New York *Engineering and Mining Journal* presents the following preliminary statement of copper production in the United States:

	1895		1894	
States.	*Pounds.*	*Long tons.*	*Pounds.*	*Long tons.*
Arizona	48,000,000	21,429	44,531,000	19,880
Michigan	130,000,000	58,036	114,526,000	51,128
Montana	185,000,000	82,589	183,094,000	81,739
Other states	23,000,000	10,246	11,351,000	5,067
Totals	386,000,000	172,300	353,504,000	157,814
Value	$39,603,600	....	$31,815,400	....

Latest Government Crop Totals.

The Department of Agriculture gives the following statistics as to domestic crops in 1895, compared with 1894:

	Area, acres.	*Product, bushels.*	*Values.*	*Yield per acre.*
Corn, 1895	80,075,830	2,151,139,000	$567,509,000	26.2
Corn, 1894	65,582,000	1,212,770,000	554,719,000	18.6
Wheat, 1895	34,047,332	467,103,000	237,939,000	13.7
Wheat, 1894	34,882,436	450,267,416	225,902,025	12.7
Oats, 1895	27,878,406	824,444,000	165,655,000	29.6
Oats, 1894	27,423,553	662,086,929	214,815,920	24.5

"The farm value of wheat is placed at 50.09 per bushel, against 49.16 per bushel last year."

European Beet Sugar Crop.

Estimates of the European beet sugar crop vary so widely from month to month it is difficult to rely upon them; but "there is a consensus of opinion that this year's crop will not amount to more than 4,000,000 tons, if so much." This will mean a reduction on last year of about 840,000 tons, "and as the production of cane sugar in Cuba is certain to be diminished, on account of the revolution, while the West Indian crop generally is said to be smaller, stocks in Europe are likely to be materially reduced in the next few months. It is noticeable that the low price of sugar this year has caused a great increase in consumption, for, according to German official statistics, the quantity of beets consumed in 1895 amounts to 145,210,395 cwt., as against 106,443,515 cwt. in 1894."

British View of French Madagascar.

The London *Daily Financial News* says: "If the Madagascar expedition was not conducted in the most judicious fashion, the French have, since their occupation of Antananarivo, shown themselves well able to turn their victory to good account. The officers are on friendly terms with all the European residents, and the Hovas are beginning to appreciate the benefits of a strong administration, under which many abuses, notably that of forced labor, have already been abolished. The outlying tribes, always hostile to the Hovas, are proving troublesome; but so soon as they discover that, so far from improving their chances of plunder, the deposition of the Hova government has led to the establishment of stronger authority in the central provinces, they are likely also to settle down more quietly than before. The complete subjugation of the island would be a costly and troublesome task, and probably the French will not undertake it—at least, not until they have more fully established their footing in Madagascar."

British Colonies and Immigrants.

A circular on the prospects of emigration to the British colonies from the British Emigrants' Information Office states there is "no opening for labor in Victoria or South Australia, and that in New South Wales only experienced miners and agriculturists with capital have any chance." In Queensland the labor outlook is improving. "In Western Australia," says the circular, "there is a good demand for miners at the Coolgardie goldfields; but the cost of living is high, water is very scarce in summer and the heat very great, so that no one is advised to go there unless he is strong and has some money." The British programme of public works "gives promise of increased employment for men in the building trades. In Natal there is a demand for bricklayers, carpenters and blacksmiths, but the office warns emigrants that there is danger of the labor market in the Transvaal becoming overstocked."

Timber.

This is the title of Bulletin 10 of the Division of Forestry of the United States Department of Agriculture, which is further described by Professor B. E. Fernow, chief of that division, in his letter of transmittal as "a brief but comprehensive discussion of the characteristics and properties of wood in general and of our American timbers in particular, which it is hoped may be useful to engineers, architects, carpenters, lumbermen and all wood workers." The paper was prepared by Mr. Filibert Roth, in charge of investigations in timber physics. Professor Fernow also states that "the information it contains is largely based on actual experiment and scientific observation, and will, it is hoped, not only explain the experiences of the practical worker with his material, but will remove erroneous notions and thus aid in improving the practice and lead to a more rational use of our forest resources." The bulletin begins with a discussion of the structure and appearance of wood, in which the elements of wood structure and the most important properties of grain and color, weight, shrinkage, strength, chemical composition, durability and decay are duly considered. The relations of weight and strength to structure, to position on the trunk, to age of tree, to conditions of growth, of moisture, etc., are pointed out. The subject of seasoning is discussed, and some of the special uses of wood, as in dry distillation, manufacture of cellulose, charcoal, etc., its value as fuel, are briefly outlined.

Manufacturers' Meeting.

The National Association of the Manufacturers of the United States is to hold its first annual convention in Chicago Jan. 21 to 23. The Chicago *Tribune* says: "Over 900 delegates are expected to attend this convention, representing manufacturing industries in this country which produce $600,000,000,000 (?) worth of goods annually. The convention will be strictly a meeting for business. The association was organized in Cincinnati last January. John B. Kirk, of this city, was elected vice-president for Illinois, which state ranks third in the Union for manufacturers. The general purpose of the association is to obtain the advantages of united action for the protection and promotion of the interests of American manufacturers and to extend the markets for American goods. It is the hope of the manufacturers that the association may attain to the power and the functions of the English Board of Trade, which is such a factor in the spread of England's commercial power. At the convention particular attention will be paid to the Nicaragua Canal. The members are strongly in favor of its construction, and will demand that in such an event the control of the waterway be in the hands of the United States government."

Chicago's Statement of Business.

The Chicago *Tribune* says: "The following are the totals, in million and tenths of million dollars, which measure the principal business activities of the city for 1895, with the corresponding totals for 1894. The right-hand column contains the results of dividing the totals for 1895 by those for 1894. The fourth line, representing the aggregate trade in produce, wholesale, and manufactures, is less than the sum of the figures above it, the difference between these being an allowance for duplication in the different departments:

	1895.	1894.	*Per cent.*
Produce	$394.2	$427.3	92¼
Wholesale	504.7	464.0	108¾
Manufactures	532.3	501.2	106¼
Total trade	1,316.7	1,279.6	102⅞
Bank clearings	4,615.0	4,315.4	107
Real estate	132.3	120.2	110
Buildings	35.0	33.8	103
Fire insurance paid	4.8	5.0	96
Losses to companies	4.4	4.5	98

"The 1,316.7 million dollars given above as the measure of total trade in produce, wholesale, and manufactures is about 28.5 per cent. of the bank clearings, which many people are in the habit of regarding as a measure of the aggregate business, though in reality it falls short of it."

Utah a State.

The people of the new state of Utah observed the 6th inst. "as a holiday in celebration of the entrance of the territory as the forty-fifth state of the Union." Salt Lake City "was clothed in bunting and decorations of great variety and beauty. The day opened with the booming of cannon and the ringing of bells. This was followed by an immense street parade of soldiers of the Sixteenth United States Infantry, state militia, police, state and civic officials, fraternal societies, local organizations of various kinds, and citizens. The streets were thronged with visitors from all parts of the state, and the procession terminated at the great Mormon tabernacle, where the exercises were held. Acting Governor Richards surrendered the office to the new governor, Heber M. Wells; Wilford Woodruff, president and head of the Mormon Church, led in prayer, after which the oath of office was administered to the new state officers by Chief Justice Zane. Governor Wells, in assuming his office, delivered an inaugural address, in which he congratulated the people on the auspicious occasion which had called them together, and expressed the opinion that the United States was to be congratulated as well as the state of Utah. In the evening the city was illuminated, and a ball, attended by the élite of the state, brought the proceedings to a close. The legislature met and organized."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade has not improved appreciably. Some wholesale houses are sending out travelers, while others have not completed taking account of stock. Mild weather at western points has interfered with business in some instances, and the week continues to present characteristics of a between-seasons period. The impression is general that uncertainty as to financial action by Congress and disturbing political conditions have an unfavorable influence on the prospect for new enterprises. Mercantile collections east, west and northwest are complained of, but at the south the comparative ease with which they are made forms a conspicuous exception. Demand for funds at various western centers is the most active for a year. Stocks of wholesalers at many of the larger interior distributing points are low. First advices of salesmen on the road are of moderate demand for goods, improvement showing itself first in dry goods, shoes and clothing.

Speculation is narrow and professional, but the stock market is strong on the belief that the $100,000,000 bond issue will be successful, and that no severe depletion of the Treasury gold reserve is likely during the thirty days of delay for popular subscriptions. It is understood that the Morgan syndicate remains substantially intact and will bid for all or none of the bonds. The money market is decidedly less nervous, but 6 per cent. rates are considered likely to continue the rule for some time to come. European speculators have covered shorts in this market. London is steadier on the decreased possibility of hostilities with Germany. Exchange is lower at 4.89 for sight drafts. Gold exports are possible at this rate, but gold shipments for the week were only $2,500,000 on Wednesday (including $1,500,000 held over from the 27th of December) and $1,250,000 on Saturday. The unwillingness of some bankers to ship and the difficulty in obtaining legal tenders are the apparent obstacles to larger gold withdrawals.

December gross railway earnings are among the best of 1895 as far as increases are concerned, for only one month showed a larger gain. The increase in December is larger than that for October or November, although the volume of business in each of those months was larger. Total earnings of 109 roads for December were $41,778,109, an increase of 8.8 per cent. over 1894, while for 1895 the total earnings of 110 roads, with 100,000 miles of track, were $510,972,332, a gain over 1894 of 5.2 per cent. This increase followed a decrease in gross earnings in 1894 from 1893 of 11 per cent., 1893 in turn showing a falling off of 2.1 per cent. from 1892. The largest gains shown in 1895 by groups of roads were by the central westerns, 8 per cent.; grangers, 7.6 per cent., and the Pacific, 7.5 per cent. The trunk lines show a gain of 5 per cent., coal roads 6 per cent., and southern lines 2.2 per cent. The smallest gain is reported by the southwestern roads, 2 per cent.

The course of prices of staples continues the improvement of last week, with an upward movement in live stock, pork and other meats, lard, flour, wheat, corn, oats, Bessemer pig and bar iron. In addition to these, firm prices are named for coal, tobacco, print cloths, steel billets, sugar, lumber, leather and hides, decreases being noted for coffee, cotton and petroleum, in addition to the cut of $1 for southern pig and 25c. for eastern iron.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,471,000 bushels, as compared with 3,965,000 bushels last week, 2,587,000 bushels in the week one year ago, 2,409,000 bushels two years ago, and 3,308,000 bushels in the corresponding week in 1893.

Comparative prices for 109 staples, quarterly, for five years, show that prices for the following are higher than they were one, two and three years ago: Mackerel, molasses, sugar, raisins, Buenos Ayres hides, hemlock leather, eastern sheetings, southern pig iron, quicksilver, southern coke, Pennsylvania coke, crude and refined petroleum, naphtha, rosin, nails, alum, carbolic acid, nitric acid, sulphuric acid, quinine and rubber. In addition, the following are higher in price than they were one and two years ago: Peas, peanuts, cotton, southern sheetings, silk, anthracite pig iron, copper, lead, turpentine, glass, spruce, alcohol and tobacco. In addition, rice, cranberries, currants and quinine are higher than they were two years ago, and as compared with one year ago, in addition to the foregoing, the following are higher in price: Flour, sheep, mutton, lemons, wool, hemp, flax, prints, ginghams, iron ore, Bessemer pig iron, steel billets, rails and beams, silver, tin, soft coal, castor oil, bicarbonate soda, borax, caustic soda, hay and cottonseed. Out of 107 staples quoted, only 41 are lower to-day than on January 1, 1895, 55 are lower than two years ago, while 78 are lower than on January 1, 1893, prior to the panic of that year.

Bank clearings aggregate $1,235,000,000 this week, an increase of about 25 per cent. over the week before, and 19 per cent. compared with the week one year ago, and even more than that as compared with the corresponding week in 1894, but 10 per cent. less when compared with the like total in 1893, and 12 per cent. smaller than the corresponding total in 1892.

There are 446 business failures in the United States this week, an exceptionally heavy total. Last week the aggregate was 403; in the week one year ago it was 405, and in the corresponding week of 1894, just after the panic, it was 484, while in the like week of 1893, five months prior to the financial disturbance that year, the total was only 301.

The general industrial situation is moderately improved. In no department are there more unfavorable conditions than a week ago, while the idleness of some steel mills and the certainty production of pig iron will be curtailed have produced a better feeling. The cut of $1 for southern pig iron is backed by the blowing out of three stacks. Woolen industries remain unchanged, with wool stronger on the proposed increase of duty. Cotton goods are firm, with limited demand, owing to the position of raw cotton, the latter having advanced nearly one-half from the lowest price, and the former only about one-seventh. Shipments of shoes have increased, six New England centers forwarding 100,000 cases within a week, against 70,000 the week before and 82,000 in the like week last year.

The usual dullness is reported from Nova Scotia, where the weather has made the roadways very heavy. General trade conditions are improved in Newfoundland, but in Prince Edward Island country roadways are almost impassable, and the movement of merchandise is light. The volume of trade among jobbers at Montreal is light, and commercial travelers are just starting out. The price of leather is hardening, and Quebec city shoe manufacturers are fully employed. The lack of snow is a drawback to business, which is most active at Toronto among dealers in dry goods and hardware. General trade there is quiet. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $27,050,000 this week, a gain of about one-third compared with last week and one-quarter as compared with the corresponding week a year ago. There are 53 business failures reported from the Dominion of Canada this week. Last week the total was 38, but in the corresponding week one year ago it was also 53, while two years ago it was 47.

FINANCIAL.

The Money Market.

In the early part of the week the New York loan market was rendered somewhat nervous over the possibility that funds would be withdrawn from the market to obtain and hoard gold for use in connection with the government bond subscription. The gold withdrawals from the Treasury since Monday outside of amounts intended for export, have, however, been only $2,975,000. The money market has been firm, but has lost the disturbed appearance which it bore for the fortnight preceding January 1. The principal feature is the absence of any demand for commercial paper, there being no market except where specially choice names are concerned, and then 6 per cent. is the lowest quotable rate, business being reputed at anywhere from 6 to 9 per cent. Time money is in good request, but is scarce even at 6 per cent. for all periods. It is noticed that lenders are in favor of long-date arrangements on this rate, and that collaterals are more or less scrutinized. Call money has been irregular. On Monday 4@9 per cent. were the extremes on the Stock Exchange. On Tuesday and Wednesday the general basis was 6 per cent., but loans were made at as low as 3 per cent. On Thursday there was a better demand and firmer tendency, the range being between 4 and 6 per cent. A little firmer tone was shown on Friday, rates being 5@6 per cent.

Due from reserve agts	16,864,000	16,214,000	Inc. 650,000
Legal tenders	5,330,000	5,438,000	Dec. 108,000
Specie	11,116,000	11,315,000	Dec. 199,000
Surplus reserve	1,862,886	1,745,571	Inc. 117,315

The New York Banks.

The bank statement for the week ending January 4 reflects the disturbance of balances incidental to the turn of the year, as well as the activity of the loan market and the preparations for the bond issue, which, until last Saturday, was expected almost immediately. The principal changes in the figures are decreases of over $12,000,000 in loans and $9,000,000 in deposits. The specie holdings increased $1,800,000, indicating thereby that the banks were strengthening their specie with a view to the bond subscription. Legal tenders decreased $369,000, and the total reserve was augmented by $1,400,000. The result of the other changes was an increase of $3,840,000 in the surplus reserve,

the figures of the statement comparing as follows with those of the previous week :

	Dec. 28.	Jan. 4.	Changes.
Loans	$478,466,500	$465,580,700	Dec. $12,885,800
Specie	67,114,200	68,954,700	Inc. 1,840,500
Legal tenders	74,097,800	73,728,700	Dec. 369,100
Deposits	501,089,300	491,614,900	Dec. 9,474,400
Circulation	13,926,700	13,952,900	Inc. 20,700
Total reserve	141,212,000	142,683,400	Inc. 1,471,400
Reserve required	125,272,325	122,903,725	Dec. 2,368,600
Surplus reserve	15,939,675	19,779,675	Inc. 3,840,000

At the corresponding date last year the surplus reserve was $35,852,050, against $83,796,650 in 1894.

Silver.

The silver market has been featureless, with only nominal changes in quotations. There continues to be a dearth of factors calculated to affect prices.

SILVER PRICES.

	Jan. 4.	Jan. 6.	Jan. 7.	Jan. 8.	Jan. 9.	Jan. 10.
London	30½d.	30 11-16d.	30 11-16d.	30⅝d.	30⅝d.	30 9-16d.
New York	66⅞c.	67c.	67c.	67c.	66⅞c.	67c.

Foreign Exchange.

The exchange market has been nervous and sensitive, but somewhat lower in its tendencies. Inquiry has been less pressing than was the case before the 1st of January, while the supply of commercial bills was without any improvement. In the latter part of the week it was understood that some amounts of sterling had been loaned at a 6 per cent. rate for money, though such transactions were not apparently on an extensive scale. The supply of bills, in fact, was, to a large extent, the result of gold-shipping operations. The posted figures, which were 4.88½@4.90 at the beginning of the week, were reduced to 4.88@4.89½ on Wednesday, and actual business in bankers' demand sterling declined from 4.89¼ to 4.89 and remained at that level on Thursday and Friday.

The effect of the change of programme in relation to the bond issue was to confuse the market temporarily on Monday, but had little other result. It is not definitely known that any of the foreign subscriptions to the bond syndicate have been canceled, the presumption being adverse to such action. Foreign selling of securities has been less of a factor in the exchange and stock markets, and the orders from abroad to dispose of high-grade investments were offset by European speculative purchases of stocks.

The gold shipments of the week commenced with the announcement on Monday that the $1,500,000 taken from the Treasury on December 27 and held by the banking houses since that time would be shipped to London on Wednesday. On Tuesday further withdrawals ensued, amounting in all to $1,725,000, which also went on Wednesday, making the total shipments $3,250,000. Considerable uncertainty prevailed as to gold shipments on Saturday, the most serious obstacle to them, however, being the general disinclination of banks to facilitate such operations at this juncture. The actual shipments to-day were accordingly only $1,250,000.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Jan. 4.	Jan. 6.	Jan. 7.	Jan. 8.	Jan. 9.	Jan. 10.
4.88½ @ 4.90	4.88½ @ 4.90	4.88½ @ 4.90	4.88 @ 4.89½	4.88 @ 4.89½	4.88 @ 4.89½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.89¼ @ 4.89½	4.89¼ @ 4.89½	4.89 @ 4.89¼	4.89 @ 4.89¼	4.89 @ 4.89	4.89 @ 4.89⅛

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87¼ @ 4.87½	4.87¼ @ 4.87½	4.87¼ @ 4.87½

Closing quotations on Friday for actual business in other classes of bills were : Cables, 4.89½@4.89¾ ; commercial bills, 4.86½@4.86¾ ; francs, 5.17½@5.18⅛ ; reichsmarks, 95@95 9/16.

The Bank of England rate remains at 2 per cent. The bank gained £571,000 in bullion during the week, and its percentage of reserve rose from 53.03 per cent. to 60.44 per cent. In the London open market discount is steady at 1¼ per cent. and call money at ¼ per cent. The London Stock Exchange has been nervous and sensitive to the political complications in the Transvaal and the differences arising out of it between England and Germany.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending January 4, 1896 :

	1896.	1895.
Dry goods	$2,793,827	$2,831,767
General merchandise	8,104,302	6,663,768
Total for the week	$10,898,129	$9,495,535
Previously reported	----	----
Since January 1	$10,898,129	$9,495,535

Exports of general merchandise from the port of New York for the week ending January 7 were valued at $7,227,728, against $7,470,065 in the preceding week and $7,346,560 for the corresponding week of last year.

THE STOCK MARKETS.

The New York Stock Market.

Speculative interests were unquestionably somewhat dismayed by the unexpected launching of the $100,000,000 government bond issue as a popular subscription. The principal element of disturbance was the idea that the period of thirty days allowed for the closing of the subscription would afford opportunity for further depletion of the gold reserve and for the development of other unsettling factors. Prices accordingly declined on Monday and Tuesday on liquidating sales and the creation of bear contracts by the professional speculative element. By Wednesday, however, the market had calmed down sufficiently to take a more rational view of the situation and outlook. It was accordingly observed that while the public was taking no interest in speculation, and that the hope of booming tendency which a sale of the bonds to the Morgan syndicate might have created had been defeated, there was no liquidation, and the leading interests in the market, while inclined to stand aside, had no disposition to work on the short side. Further consideration of the matter led also to several other important conclusions. In the first place, it is the opinion of the street that the Morgan bond syndicate will not disband, but will put in a bid, with the chances in favor of its obtaining the whole, or, at any rate, all but a small portion, of the bond issue. The fact that the public, even if it wants the bonds, cannot obtain gold with which to pay for them is a limitation upon popular subscriptions, while the banks which have the gold are more likely to act in connection with the syndicate than to take the alternative of paying a high price or of having their individual bids rejected. The withdrawals of gold from the Treasury have not been excessive, amounting in all to $2,000,000 or more for the week, while there is evidence that the Treasury has armed itself against such depletion of its reserve by an arrangement with certain New York banks to supply it with gold during the thirty days of suspense. The money market, though firm, has also calmed down considerably, and though gold exports for the week amounted to $3,225,000 (including $1,500,000 taken from the Treasury two weeks ago and held in the bankers' vaults), the exchange market is not so active or strong as to indicate a heavy outflow. These factors, therefore, asserted themselves by Wednesday, and caused a marked hardening of values throughout the balance of the week. At the same time the market has been very narrow, and covering of short contracts furnished the bulk of the buying.

The foreign markets have been influenced almost entirely by the Transvaal complications, and the Venezuela question has been relegated to the background. This, with the less acute feeling in both England and this country about the latter subject, has checked foreign selling of American securities, and even induced a certain amount of professional short covering for London account.

As will be seen by reference to the regular tabulation of prices for the week, the general market moved in unison, the depressions on Monday and Tuesday being succeeded by a rally in the latter part of the week which extended to nearly all portions of the stock list. It might be noted that the stocks which are dealt in in London, and which were the objects of selling from that quarter, such as Louisville & Nashville and St. Paul, suffered the greatest decline, but recovered ground rapidly with the aid of covering of the foreign short contracts.

Special features of interest, however, were not lacking. A bear attack on Manhattan was in progress on Tuesday and Wednesday, based on allegations that the company's dividends were likely to be reduced to a 4 per cent. basis. The price declined from 101⅝ to 96⅜, but rallied to 98¼. Leather preferred was also under manipulative pressure, and fell from 62 to 56½. It was widely rumored that the company's executive committee had recommended the omission of any dividend on the preferred, though the board of directors will not decide on the question till next week. Sugar, after touching 97, rallied to 103⅝. The annual meeting of the company was held this week, and, as usual, there was no annual report, nor was any definite information afforded. The assurances of the principal managers that the company was earning its dividends were, however, supplemented by apparently inspired reports that the company had earned considerably more than the amount required for the year's dividends. The rise on Friday was accelerated by intimations that an increase in the German export bounty on refined sugars was improbable. General Electric was strong and higher on the expectation of a favorable annual report. Reading securities were the objects of liquidating sales, due to the inability or unwillingness of holders to pay the assessment. The stock touched 2½, the first preferences falling to 18½, and the other juniors showing similar declines. The modification of the reorganization plan, by which holders who deposited the stock or incomes under the plan by January 10 are to have an extension of sixty days in the time for payment, brought large amounts of the securities to the depository of the reorganization committee during the past few days, and there was even some buying of them at the declines. The action in question is considerable to improve the prospects of the reorganization. The appointment of one receiver for the Northern Pacific Company is also thought to be calculated to hasten developments in connection with that corporation's reorganization.

Boston Stock Market.

[Special to BRADSTREET'S.]

The market continues to show a general lack of life, with values working down somewhat from a week ago. Atchison has met with fair attention, but the close shows a loss in price of 1⅜ points for the week, with Mexican Central ½ point lower. Coppers have ruled quiet, with Calumet & Hecla 1 point off. Land stock has been very quiet. Bell Telephone shows an advance of 1 point at the close.

Prices of principal shares, with volume of transactions, have been as follows :

	Week ending Price Jan. 9, 1896.	Price Jan. 2, 1896.	Sales Jan. 9, 1896.	Sales Jan. 2, 1896.
Atchison, Topeka & Santa Fe	13⅜	15	15,294	7,905

TRADE CONTINUES QUIET.

MERCANTILE COLLECTIONS SLOW, EXCEPT AT THE SOUTH. TRAVELERS BEGINNING TO GO OUT. STOCK-TAKING NOT COMPLETED. IRON FURNACES MUST BLOW OUT UNLESS DEMAND REVIVES SHARPLY.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, January 10.—The new year has not yet got started far enough to bring about much improvement in general business, and trade in most kinds of merchandise is yet quoted quiet. The money market maintains a high rate, with call money quoted all the way from 6@8 per cent., and time loans ranging from 6@9 per cent. as to names. Mercantile paper is quiet. The boot and shoe market shows little improvement as yet, orders coming forward very moderately, while the leather market is yet more or less unsettled. Hides are scarce and firm in price, but this does not appear to check the decline in leather. Supplies of the latter show considerable accumulation, which will apparently have to be reduced before the market will be able to show strength. Iron and steel are quiet, but indications promise liberal building operations during the coming year, which will require large supplies. Lumber is steady, with spruce scarce and firm, owing to lack of snow in the northeast. The cold weather is helping the coal trade.

Providence, January 10.—Owing to the uncertainty of congressional action in financial matters, there is an uneasy feeling among bankers. Banks are accumulating funds, taking little or no outside paper. With few exceptions, collections are unsatisfactory.

Philadelphia, January 10.—Nothing is doing in wool; waiting congressional action. Petroleum moderately active at fair prices. Leather and morocco dull. Prices have a downward tendency. Some factories will partially close for a few weeks. Boots and shoes fairly active; not much demand for finer grades. In some lines of lumber there is an improvement in orders. Prices have not changed. A fair movement in tobacco is noticed, but the greater part is on orders made last year for January delivery. Havana leaf is steady and prices advancing. Coal without change; steady trade at fair prices. Iron is dull and prices are weak.

Pittsburgh, January 10.—There is some little increase in the volume of business the past week, although trade still continues quiet, which is expected at this season. Merchants are still devoting their time to stock-taking. Indications, however, seem to be for a large spring trade. Prices are well maintained. Collections are reported somewhat better, and, all things considered, general business here is in a healthful condition. Iron continues dull and prices are unchanged. Very few furnaces have shut down, and until they do no improvement is looked for, as the demand for raw material is very light. Few sales are reported at any price.

Buffalo, January 10.—There is no change in trade conditions. The dullness usual at this season of the year continues.

Baltimore, January 10.—The first week of 1896 opened with salesmen of the various jobbers out on the road. Merchants report orders coming in freely, with encouraging advices from their salesmen as to spring trade. Merchants throughout the country are showing a great deal of conservatism in purchasing, but jobbers are sanguine that their hopes for a good spring business will be realized.

West and Northwest.

Cleveland, January 10.—The trade situation in general is practically without change. Collections fair.

Cincinnati, January 10. — Business continues quiet.

Chicago, January 10.—There has been a moderate increase in the trade with the dry goods, shoe and clothing houses during the week, as salesmen have gone on the road and are sending in more orders. The sales, however, are in small lots, and the feeling on prices rather easy, but these are not important changes. The light hardware orders are more numerous, and the calls for bar iron are improved slightly. Prices are firm, and manufacturers have ordered an advance of $1 per ton for the first of February. The closing of the iron and steel mills has caused dullness in pig iron, and prices of southern coke are $1.50 to $1 lower, with more pressure to sell. In other lines slowness prevails. Produce is slow. Prices of butter and eggs are lower. Wool receipts are 57,456 pounds. Money is active and firm. Demand for money is general and the best for a year. Grain men are borrowing freely, especially to crib corn in the west. Bankers refuse to loan money to stock speculators.

Detroit, January 10.—The volume of trade in merchandise lines continues moderate, orders being of a mail character principally. Manufacturers report a fair business and outlook, but collections continue slow, with no immediate signs of improvement.

Louisville, January 10.—Trade in general shows no special activity, though a number of jobbing houses have started their salesmen out and are meeting with fair success in securing spring orders. Collections are rather backward. Leaf tobacco is

active and stronger, and an improved quantity of the offerings is noticeable.

St. Louis, January 10.—Stocks in general have been worked down to facilitate inventory, which in a number of instances has been completed, and travelers who are returning to the road are taking fair sized orders for immediate delivery and for spring use. The volume of business for the past year in dry goods, boots and shoes and hardware has been large and satisfactory. Of the staple goods, complaints come from the grocery houses, who say they have made only nominal headway, but all lines predict increased sales for the present year. Agents for pig iron report a better demand for small lots and numerous inquiries for amounts ranging from 1,000 to 2,000 tons. Light sheets are lower, with some buyers placing contracts for future shipment.

Kansas City, January 10.—All leading houses claim poor trade on account of slow movement of corn crop, with slow collections. Live stock shipments not so liberal, with higher values.

Milwaukee, January 10.—Trade rather quiet and no distinctive features noted. Collections are fair.

Des Moines, January 10.—Business in all lines is very quiet and collections low. Weather is mild and business shows no improvement.

St. Paul, January 10.—Salesmen are going out daily, but trade has barely opened, and orders sent in thus far are moderate. Collections moderate to fair.

Omaha, January 10.—Trade shows no material improvement. Collections are fair.

Sioux Falls, January 10.—Trade is quiet with jobbers; retail trade fair. Fair collections.

Southern Cities.

Charleston, January 10.—Business in dry goods and shoes is fair; in groceries very quiet.

Savannah, January 10.—There is an increase in both trade and collections over preceding week, due to beginning of month. Spirits receipts show a marked increase over last week. Rosin is coming in well. Shipment of spirits show slight decrease, but rosin a heavy increase.

Atlanta, January 10. — Jobbers in hardware, shoes, dry goods and notions report good trade—better than this time last year. Collections are satisfactory. Banks report deposits increasing.

Augusta, January 10. — Jobbers report fair amount of orders from country salesmen. Collections are fairly satisfactory. City retail trade quiet.

Jacksonville, January 10.—There is a fair increase in both trade and collections over preceding week.

Birmingham, January 10.—General business is unchanged, except a little improvement over last week.

Chattanooga, January 10.—Trade is rather quiet. Wholesale men are now devoting themselves to collections.

Nashville, January 10.—Trade is somewhat sluggish. Collections from the country are good. Money is closer, with increased demand and some improvement in local security market.

Memphis, January 10.—General trade continues quiet in all lines. Country collections are fair.

New Orleans, January 10.—Trade quiet. Buyers apparently awaiting developments. Cotton market irregular, with but little doing. Sugar fair; arrivals sell promptly. Exports corn continue liberal.

Galveston, January 10.—Jobbers report a fair business for first week after holidays. Collections still complained of.

Pacific Coast.

San Francisco, January 10.—Commercial lines quiet. Produce dull. Cereals dull, with downward tendency. Collections are slow. Wheat freights unchanged—£1 5s. to United Kingdom direct.

Portland, January 10.—The produce market is quiet, with slight demand. The large retail houses are forcing business, and the drug firms are cutting patent medicines from 40 to 50 per cent. There is a slight increase in country orders. Local and country collections are fair.

Seattle, January 10.—December business shows a decided improvement over last year. Business this week is quiet. Collections fair.

Tacoma, January 10.—Better prices and more activity in wheat and flour. General trade presents the usual volume. Oriental business is good and South African traffic encouraging. Collections are unsatisfactory.

Canada.

Toronto, January 10.—Generally speaking, wholesale trade is quiet, but there are exceptions, a few dealers in dry goods and hardware reporting some improvement. Wheat is higher, white selling along the northern at 68c.

Montreal, January 10.—Travelers have not yet sent in many orders, most of them having only gone out this week, and others not yet started. The general volume of business has been light. Some slight reaction in groceries is apparent, while in other lines trade is about steady. Quebec reports a hardening tendency in leather, with prospects of an advance in prices. Shoe manufacturers are fully employed. Collections are only fair. The lack of snow has a bad effect on business.

Halifax, January 10.—The dullness usual at this time of year prevails. The weather during the week has been more seasonable, but want of snow renders the roads bad throughout the country. There has been some improvement in the general trade of Newfoundland. Advices from Prince Edward Island state that on account of the almost impassable condition of the roads the movement in produce is very light. With improved roads business would be pretty brisk. Upon the whole, payments are up to the average.

Dry Goods.

[Special to BRADSTREET'S.]

The movement continues quiet in most departments, although agents are more or less busy delivering spring goods, and jobbers are opening up their new stocks. Cotton fabrics maintain a fair amount of firmness in the face of a limited demand, owing to the position of raw cotton. The latter at the first of the year showed 47.1 per cent. advance from the lowest point, while the advance in the price of goods has only been 14.5 per cent., leaving a wide margin against the manufacturer, which will have to be cut down by the goods advancing or raw cotton declining. The cotton marketed to January 1 has been 2,094,166 bales less than for the same time last year, while the visible stock on hand was 778,602 bales less than on January 1, 1895. Printed fabrics are opening well, while ginghams are steady. Dress woolens are quiet with agents, and little new business is coming in. Men's-wear woolens are quiet, but the market is steady. Overcoatings are quiet.

Wool.

[Special to BRADSTREET'S.]

Trade has ruled more quiet, but values are generally well maintained. The strength of the market is caused by the proposed tariff bill now before the Senate in Washington. If the bill becomes a law wool will advance all along the line, and, if not, there is little prospect of prices being forced lower; hence dealers have put up their prices a trifle and are prepared to hold them for a time. Fleece wools and Australian grades have shown the most strength and advance, territory grades ruling comparatively very low. Domestic washed fleeces are about 2c. to 3c. higher than a year ago, while territory grades are selling almost as cheap as twelve months since. The advance in Australian wools compared with a year ago is about 6@7c. per scoured pound. The next London sale begins January 14.

FOREIGN GOVERNMENT STOCKS.

The London *Daily Financial News* says: "In the foreign market the movements have not been important, except in Turks, Spanish and Bulgarian. Chinese and Japanese stocks were scarcely affected by the war, and it is only necessary to mention that China has borrowed £4,000,000 at 6 per cent. in London and about £16,000,000 at 4 per cent. in Paris, with the guarantee of the Russian government, during the past year. Most of the powers have been engaged in little wars—France in Madagascar, over which a protectorate was established in October, Spain in Cuba, Italy in Abyssinia, while we ourselves have had the Chitral campaign and the Ashanti affair. A reverse in Abyssinia is the cause of the set-back in Italian credit, for the finances of the country have undoubtedly improved under the intelligent direction of Baron Sonnino and the reduction of the excessive paper currency. The cost of coping—so far, unsuccessfully—with the revolution in Cuba has entailed a severe drain on the resources of Spain, and in consequence Spanish bonds are fully twelve points lower than at the end of 1894. In France ministries have come and gone with their usual rapidity, and the present Prime Minister (M. Bourgeois) is the third occupant of the post this year, having succeeded M. Ribot, who in turn followed M. Dupuy. It is also to be noticed that the president of the republic, M. Casimir-Perier, resigned in February, and was succeeded by M. Félix Faure. In July the civilized world was startled by the assassination at Sofia of M. Stambouloff, the statesman to whom Bulgaria mainly owed her independence. The circumstances under which the murder took place and the complete failure to bring his murderers to justice have not raised the Bulgarian government in public estimation, and it is only surprising that Bulgarian bonds still remain as high as 84. Early in the year reports of massacres of Armenians were received, and since then Europe has been constantly disturbed by events in Turkey. To a large extent the ill-treatment to which the Armenians in Turkey have been subjected was brought on by Armenian agitators, in furtherance of a long-premeditated plan to excite Europe against Turkish rule. The agitation, unfortunately, was only too successful, and for several months grave disquietude has been caused by the apparent unwillingness or inability of the Sultan to restore order in his dominions. Among other attempts to break up Ottoman rule, a run was organized on the Ottoman Bank in November, and though the strength of the bank enabled a successful stand to be made against it, a serious effect was produced on its shares. So far the firm attitude of the great European powers has compelled the Sultan to curb the fanaticism of

the Mussulman population; but, although less strained, the situation is still grave, and, unfortunately, the Sultan obstinately refuses to understand that unless he carries out the reforms demanded by the powers his deposition is only a question of time. Under such conditions the fall in Turkish securities cannot be wondered at, the more so as the natural result of internal disturbance is already being shown in a considerable falling off in the revenue. The following table shows the prices at different times of the principal stocks:

	Dec. 29, 1894.	1895 High-est.	1895 Low-est.	Dec. 30.

"EMBEZZLEMENTS OF 1895."

The Chicago *Tribune's* reports show the record of embezzling, defaulting, swindling, forgery and bank wrecking for 1895 to be "a gratifying decrease as compared with 1894, the total being but $10,423,205, while that of 1894 was $25,234,112, and of 1893 $19,929,692. The statement of rascality by months is as follows:

January	$1,353,000	July	$556,412
February	1,013,335	August	649,766
March	575,334	September	454,309
April	1,966,793	October	992,100
May	599,094	November	841,400
June	1,048,969	December	362,684

"Being an average of about $868,600 per month. The record by states is as follows:

Alabama	$34,409	New Hampshire	$96,000
Arkansas	7[illegible]	New York	1,384,866
California	143,000	North Carolina	177,800
Colorado	564,200	North Dakota	----
Connecticut	353,200	Ohio	596,209
Delaware	----	Oregon	4,802
Florida	80,500	Pennsylvania	803,651
Georgia	26,420	Rhode Island	10,000
Idaho	11,000	South Carolina	2,375
Illinois	1,143,332	South Dakota	470,700
Indiana	182,475	Tennessee	102,000
Iowa	284,700	Texas	149,000
Kansas	167,285	Vermont	22,000
Kentucky	118,966	Virginia	251,000
Louisiana	37,400	West Virginia	79,087
Maine	118,720	Wisconsin	274,989
Maryland	----	Washington	858,500
Massachusetts	727,903	Wyoming	76,654
Michigan	128,400	Arizona	----
Minnesota	224,150	District of Columbia	61,000
Mississippi	4,000	New Mexico	3,900
Missouri	389,187	Utah	10,800
Montana	123,519	Indian Territory	8,000
Nevada	85,000	Oklahoma	35,500
Nebraska	151,300	Alaska	----
New Jersey	94,996		

"Out of 504 cases reported twenty-five persons stole over $50,000 each, seventeen over $100,000 each, and two over $500,000 each. Last year four stole over $1,000,000 each, but there were no million-dollar thieves this year.

"The losses are distributed as follows: Stolen by city and county officials, $2,468,686; miscellaneous stealings, $2,487,420; stolen from banks, $2,178,378; frauds and forgeries, $1,913,994; by agents, $1,209,705; from loan associations, $137,415; by postmasters, $27,607.

"The summary of defalcations by years from 1878 to 1895 is as follows:

1878	$2,784,000	1888	$2,240,000
1879	2,754,000	1889	8,600,000
1880–81	4,888,000	1890	8,622,956
1882	2,900,000	1891	19,720,249
1883	2,350,000	1892	8,837,547
1884	22,154,000	1893	19,929,692
1885	3,475,000	1894	25,234,112
1886	3,780,000	1895	10,423,205
1887	4,550,000		
Total			$154,232,806

SOUTHERN COTTON MILLS.

The Chattanooga *Tradesman* says: "Perhaps in no year since there was a southern cotton mill trade has that interest grown so much as in 1895. The southern mills went through the pinch of 1893–94 in good shape, practically all of them steadily earning money every month of the panic's continuance. As all remember, the squeeze did not cause a southern mill to fail or shut down. The trade has been notably expanded in 1895 in the Carolinas and Georgia. The new mills are all prosperous. This industry attracted unusual attention from the wealthy spinners of New England, especially those of Lowell and Fall River, and one result of this has been the establishment of several large branch mills by New England companies in the south for the manufacture of heavy goods. The investigations made of the cotton trade of the south by practical men of New England has induced a considerable number in that quarter of the country to seek investments of their surplus money in southern mills, and leading organs of the eastern trade are urging the listing of southern cotton mill stocks on the Boston exchange, a thing the *Tradesman* wonders was not done long ago. Such a scheme carried out would interest eastern capital in the southern industry in the way that would be best for that industry's future development—a fact that appears to us too plain to need a syllable of explanation. Let our eastern practical men have, at a fair price, the control of a half dozen of our established mills, and it will not be long before the owners or their sons will be our fellow citizens. They would take the lead in pushing the plants upon the production of finer grades. Our own spinners would learn from them. They would learn from our spinners. The clash and friction of ideas and methods could not fail to be signally beneficial.

"But the most important item in the matter is that such sales of established properties would release funds in the hands of men of experience from the old investments to be used in building new mills of the best, most modern grade. The plan would thus work two ways for the progress of our leading southern manufacturing industry. We believe there has been enough buying of southern cotton mill stocks in New England in 1895 to start such a movement as we hint at, and that the effects will be visible before the end of 1896; but in the meantime the southern mill companies should list their stocks on the eastern exchanges."

PORTUGAL IN INDIA.

The Glasgow *Herald* says: "There is a curious old-world flavor about the news that the forces of Portugal are engaged in putting down a rebellion in India. It reminds us of the fact that the Portuguese, the pioneers in Eastern conquest and commerce, have still a footing in Hindostan. Out of all their once great possessions in the East they retain only some 750,000 square miles in India, Malaya and China. Their colonies are poor and not very profitable. At the present day they are inferior as colonizers, even to the French. Wherever their dominion extends they blight instead of fostering trade. They seem to have lost whatever tact they ever had in dealing with native races. In the small strip of territory called Goa, over which Portugal rules on the west coast of Hindostan, they are once more at loggerheads with the aboriginal population. Their native army has for some time been in a state of rebellion. Consequently the movement, to suppress which troops have been sent from Europe, is called officially a military revolt. It is manifestly, however, more than that. The mail news which has just arrived from India shows clearly what did not appear from the telegrams received in this country, that a considerable proportion of the natives are siding with the rebel soldiers. A new Governor-General, Rear Admiral Raphael Andrade, has recently arrived with a force of some 750 soldiers. He is accompanied by the Duke of Oporto, brother of the King of Portugal, Dom Carlos, who was here the other day. And the new Governor is 'taking drastic measures to put an end to the rebellion.' The character of these measures proves that it is not merely with a handful of mutinous Goanese soldiers that he has to deal. He is to convey information to the rebels and ranes (village chiefs) that unless they lay down their arms means will be taken for their extermination, and that fire and sword will be carried throughout the province of Sattary, that villages will be burnt or destroyed in succession, all in arms being liable to be shot. Clearly one at least of the nine provinces into which this petty colony of 1,447 square miles is divided is in revolt against the Portuguese government. An order already issued over the signature of the new Governor-General contains still more convincing evidence that the sentiment of rebellion, at all events, is not confined to a single province. All 'mercenaries of the state' are commanded to present themselves at the secretariat to receive orders if they do not wish to have their pensions suspended and themselves treated as rebels. This is a desperate attempt to secure the loyalty of the village chiefs. According to the reports of the Bombay journals it has been unsuccessful. None of the village chiefs have come in. Still more significant is the paragraph in the Governor-General's proclamation prohibiting the press from discussing or criticising, favorably or unfavorably, the orders of the authorities legally constituted, or the military orders given for the suppression of the revolt, or publishing any news about the military operations which is not sanctioned by the government. The reason given for this gagging of the newspapers is that a 'majority of the periodical press of this country has forgotten the civilizing mission which is incumbent on it, converting itself into an instrument of discussion of personal feelings, of castes, religions and politics, distorting facts, insulting the constituted powers, and instigating as well the people to disobedience and disrespect to the principle of authority,' and so on. Manifestly the Portuguese are on very bad terms indeed with the population of Goa. Doubtless Admiral Andrade and his 750 men will be able to 'suppress the revolt.' But it is only too probable that he will, unless he is a very exceptionable Portuguese indeed, fail to introduce better relations between the governing caste and the natives. No more striking illustration of the difference between British and Portuguese rule in India could be found than this proclamation of the Governor of Goa. The native press of British India daily commits all these outrages on the 'constituted authorities' for which Admiral Andrade has deemed it necessary to gag the press of Goa. But our vice-consuls do not gag the native press of Calcutta and Bombay. They do not need to do so."

FIRE LOSSES IN 1895.

The *Journal of Commerce* says: "The fire loss of the United States and Canada for the year 1895, as compiled from our daily records, amounted to $129,839,700. The December losses were slightly lighter than normal, aggregating $10,018,800. The total for 1895 was about $1,600,000 greater than the 1894 loss, but was nearly $28,000,000 less than the 1893 figures.

"The following comparative table exhibits the losses by months:

	1893.	1894.	1895.
January	$17,958,400	$10,568,400	$11,895,600
February	9,919,900	11,297,600	12,360,200
March	16,662,350	9,147,100	14,239,300
April	14,600,900	11,540,600	11,018,150
May	10,127,100	10,777,800	7,761,350
June	16,344,950	8,282,300	9,223,000
July	12,118,700	16,307,000	9,085,000
August	13,222,700	10,432,800	9,629,000
September	10,568,700	10,149,900	10,766,300
October	11,014,700	8,186,700	13,411,500
November	11,493,000	12,135,800	10,131,500
December	12,105,475	10,321,000	10,018,800
Totals	$156,445,875	$128,246,400	$129,839,700

"During the year 1895 there were 2,418 fires where the estimated loss in each case exceeded $10,000, and the largest loss by any one fire was $1,250,000. The property was the Warren Manufacturing Company's plant, at Warren, R. I. These fires are shown in the subjoined classification:

	$10,000 to $20,000.	$20,000 to $30,000.	$30,000 to $50,000.	$50,000 to $100,000.	$100,000 to $200,000.	$200,000 to $1,250,000	Total.
January	81	46	50	18	13	7	216
February	80	46	36	36	23	9	235
March	83	47	33	42	14	10	229

November	65	32	27	22	16	6	168
December	94	45	37	26	13	7	222
Totals	929	471	412	331	190	85	2,428

"The following fires during the year caused a total loss estimated at half a million of dollars or over:

Toronto, Ont., newspaper building and others	$750,000
Toronto, Ont., business block	800,000
Macon, Ga., dry goods store and other	715,000
Halifax, N. S., elevators and dock property	600,000
Toronto, Ont., several business houses	1,140,000
New Orleans, La., cotton yard and press	500,000
Kansas City, Mo., packing house	700,000
Milwaukee, Wis., dry goods store and other	890,000
Pasadena, Cal., Hotel Raymond	500,000
Ardmore, I. T., business portion of town	500,000
Montreal, Que., tobacco factory	500,000
San Francisco, Cal., various	1,000,000
Menomonee, Mich., saw mills and lumber	500,000
Sprague, Wash., railroad property and other	1,000,000
Newark, N. J., tinware factory	500,000
Warren, R. I., cotton mills	1,250,000
New Orleans, La., rice mills	500,000
New York city, various	1,000,000
Chicago, Ill., several business houses	500,000

GOLD AND SILVER PRODUCTION.

The Director of the Mint has received approximate totals of gold and silver production of the United States in 1895 from the mint officers and other agents employed to collect these statistics, and the "value of the gold and the number of fine ounces of silver produced by the several states and territories is estimated to have been as follows:

Source.	Gold value.	Silver, fine oz.
Alaska	$1,500,000	----
Arizona	2,607,000	1,000,000
California	15,000,000	154,700
Colorado	15,000,000	22,000,000
Idaho	2,790,700	4,000,000
Michigan	40,000	35,000
Montana	4,392,700	14,500,000
Nevada	1,700,000	622,600
New Mexico	1,075,000	154,700
Oregon	2,200,000	7,700
South Appalachian states	316,200	1,200
South Dakota	4,255,000	82,200
Texas	[illegible]	206,000
Utah	1,352,300	8,223,800
Washington	300,000	11,100
All others	25,000	500
Totals	$52,614,000	51,000,000

"The Director of the Mint is of the opinion that the estimate of the gold product of Oregon is $600,000 too high; of Montana, $250,000 too high, and South Dakota, $400,000 too high, and that when the final figures are compiled the production of gold by the mines of the United States in 1895 will be found to have been from $46,000,000 to $47,000,000, and the silver product about 46,000,000 fine ounces. The product last year was $39,500,000 in gold, and of silver 49,500,000 fine ounces."

ANOTHER RUSSIAN RAILWAY.

The *Railroad Gazette* says: "No other people on earth are showing such enterprise and boldness in building new railroads as the Russians. Where they get the money to build their great lines across rude and thinly-peopled countries, and even across countries which are uninhabited, is a mystery, but they are building them. One of the works now under way is a railroad 400 miles long from Vologda to Archangel. Vologda is a little to the north of the middle of European Russia. It is about 10 degrees of longitude east of St. Petersburg and about one degree of latitude south. Archangel is a port at the head of a gulf of that name on the White sea. This railroad was authorized by a decree issued July 10, 1894. The rails are now laid on 12 miles of it. The work now under way is from Archangel south, and 7,000 workmen are employed there. For 20 miles the line is through an uninhabited wilderness, and for 160 miles south from Archangel there is but one village of fifteen little houses on the line. Much of the way there are forests through which cuttings must be made before horsemen can pass. At one place in the province of Archangel the railroad will be carried for 16 miles on a pile trestle. At Archangel elevators and docks will be built and establishments for freezing fish, and it is expected that the entrance to the port will be deepened to 22 feet before the railroad is built through. In 1895, 24,000 tons of freight were shipped by sea from Archangel, and 1,005 vessels of greater or less size entered there."

SUPERIOR IRON MINE OUTPUT.

The Bessemer iron ore interests on the Mesaba, Vermillion, Gogebic, Menominee and Marquette ranges have combined to limit the output of the Lake Superior mining region and give the iron market in all its branches a stability which it has not enjoyed for years. A secret meeting, at which every producing mine on the range was represented, was in session in Cleveland, January 10, and "nearly completed the agreement. It is stated that the only point of difference now is the determination of the amount of the output of the various mines for the coming year."

TEXTILE MILL BUILDING.

The *American Wool and Cotton Reporter* says: "The past six months has seen the undertaking of the construction of many textile mills that will stand for years to come as monuments of what brains, energy and money can produce in these days of active competition. While the last half of the year 1895 has not such a brilliant record as regards the construction of textile plants as the first six months can boast, still it is a record to be proud of, and cannot but demonstrate the healthy, steady and rapid growth of the textile industry of the country, thereby opening more widely a field for the investment of the savings of the people and furnishing employment, either directly or indirectly, for thousands of persons.

"The last half of 1895 has seen 156 new mill enterprises set on foot, ranging in importance from small spinning mills in the south to large and imposing affairs, such as the new mill of the Berkshire Manufacturing Company, Adams, Mass., which is to be 440 by 118½ feet, five stories, the equipment consisting of 80,000 spindles and 2,100 looms, and the whole costing in the neighborhood of $1,000,000. As compared with the previous six months, there have been forty-five mills less put in way of construction in the half year just closed. The number of mill enterprises set on foot during the first half of 1895 was something exceptional, and the fact that the succeeding six months did not hold the pace should be no cause for alarm. The year 1895 will long be remembered as one of the most active in the annals of textile mill construction the country has yet seen, no less than 357 new enterprises having been launched within that period, being one more than during that memorable and prosperous year 1892. The past year shows a gain over 1894 of ninety-four mill plants, there having been undertaken in the latter year 263 new enterprises; in 1893, 279, and in 1892, 356. In comparison with the last half of 1894, the past six months show a gain of nine mills.

"The cotton mills hold the palm in matter of numbers, the number of new concerns being seventy-three, exactly the same as in the previous six months. Next comes knitting mills with forty-two, or fifteen less than in the previous six months; woolen twenty-three, also a loss of fifteen; miscel-

laneous eleven, a loss of six, and silk seven, a loss of nine.

"The number of new enterprises undertaken during the past six months as compared with the previous six months, and for the past year as compared with the previous one, are as follows:

	Last half 1895.	*First half 1895.*
Woolen	24	38
Cotton	73	73
Knitting	42	57
Silk	7	16
Miscellaneous	11	17
Totals	156	201
	Year 1895.	*Year 1894.*
Woolen	61	45
Cotton	146	101
Knitting	90	69
Silk	23	21
Miscellaneous	28	27
Totals	357	263

"North Carolina once more heads the list with 32 new mills, a total for the year of 63; then comes Pennsylvania with 17, or 46 for the year; next New York with 16, or 39 for the year; then Massachusetts, who boasts of 15, or 34 for the year; then Georgia with 14, or 28 for the year; then South Carolina with 10, the total number for the year being 32; Rhode Island has 7, with a total for the year of 12; also Alabama with 7, or 12 for the year. The remainder are scattered among seventeen other states in numbers from one to five.

"The south is attracting large amounts of northern capital and deservedly so, but at the same time the textile interests of the north are not being neglected, but are more steadily absorbing large sums of money that is ever looking for safe and profitable investment. One noticeable feature which cannot but show that cotton manufacturers have confidence of profit yet to accrue from the manufacture of textile goods is the fact that several concerns already operating large mills have seen fit to erect additional mills, thereby largely increasing their capacity, in some instances to the doubling point.

"Manufacturers generally are fully alive to the importance of the improved facilities for the production of their goods, and demonstrate this fact by the way they have added new machinery. Additions, both in the way of buildings and machinery, have been the order of the day, many of them being of such size as to approach the importance of new mills. Lots of worn-out and antiquated machinery has given way to the newest and most improved that money can buy, with a view to producing the maximum amount of goods at a minimum cost, this being made absolutely necessary by the keenness of competition."

ATLANTA'S EXPOSITION.

The Philadelphia *Press* says: "The Cotton States and International Exhibition which was open in Atlanta, Ga., for three months and a half closed last Tuesday night, and an idea as to the success of the completed enterprise can now be gained. In some respects it exceeds the expectations of its projectors, while in others it fell behind their anticipations—which is the usual record made on such occasions. If an exact balancing of receipts and expenses were the only rule by which to judge an exposition's career, then the Atlanta Fair would have to be voted a failure, for the outgo was undoubtedly larger than the income, but the money receipts are not the only gauge.

"The total attendance, not including the last day, was 1,286,863, or an average of 12,868 for each of the 100 days the exhibition was open. But this includes paid and free admissions, and as the latter numbered 434,935, there were only 852,928 visitors who paid to see the show. This is an unusually large proportion of free admissions. At the Chicago Fair, in 1893, the total admissions were 27,539,521, of which 6,059,380 were on free passes and 21,480,141 were paid for. Less than two-ninths of the admissions at the Columbian Fair were free, while over one-third of the admissions at Atlanta were on passes. When one of the directors was asked about the financial results he said that an attendance of 500,000 more people would have made the income equal the expenses. This deficiency would have been nearly supplied had the 434,935 admissions on passes been paid for.

"The total receipts at Atlanta from all departments were $487,621.85, but the expenses have not yet been summed up. The total receipts at Chicago were $33,290,065.58 and the disbursements were $31,117,353.79, but the latter sum does not include the appropriations made by the different states, the money voted by Congress, and the appropriations by foreign governments. If all these were added, the cost of the Columbian Exhibition of 1893 would be found to be over $40,000,000, the largest sum that any world's fair ever yet cost. The cost of the Paris Exposition of 1889 has been placed at $11,000,000 and the total receipts at $8,380,000. The Centennial Exhibition in this city had 9,910,966 visitors during the 159 days it was open, and the first world's exhibition, held in London in 1851, had 6,039,195 visitors during its life of 144 days.

"So, if measured by any one of the world's exhibitions, the Atlanta Fair would be pronounced a failure. But such a criterion would be evidently unfair. The conditions were entirely different, and taking these and the results together and the Atlanta enterprise must be declared a success. The real, substantial results are yet to be gathered. They will come from the impetus given to the industrial spirit of the south. It is safe to say that to nine out of ten of the visitors to the Atlanta Fair the larger part of the exhibits was a revelation. The Atlanta *Constitution* says that 'the wide-awake visitors from every southern state who studied our exhibition showed a lively interest in everything pertaining to manufacturing.' The same newspaper claims that the mingling of people from north and south has wiped out sectionalism, revived and strengthened the American spirit, and given all a better idea of southern resources and of the condition and progress of the negro race.

"It is in these ways that the real profit of the exhibition will come. And while all the south will share in the gain, the larger part of the good will accrue to the city and state whose energy and foresight carried the enterprise to success."

MACHINES FOR SETTING TYPE.

The London *Times* says: "Before the Society of Arts, last week, a paper was read by Mr. John Southward on 'Machines for Composing Letterpress Printing Surfaces.' A review of the history of the invention of these machines, he said, would begin with the first patent granted for a composing machine, in 1822, and for a distributing machine, in 1840. The specifications of these two inventions foreshadowed the principles of all the composing machines that had since been constructed. The two systems of machine now in existence might be differentiated as those in which movable types were used and those in which plates were produced directly by casting from metal matrices. Of the first class only two kinds were now actually offered for sale to the trade, though three other forms were in use in this country. Of those two, one was made in America and the other was the only English machiue produced commercially. Though the really important patents connected with these machines had now all expired, engineers could not be induced to embark in the business of making them. There was no demand for them, because the opinion of the great majority of printers was distinctly unfavorable to mechanical typesetting. Of movable-matrix machines three different forms had been invented and worked in America. Two, however, were held to be infringements of the third, which was the apparatus known as the linotype. The latter part of the lecture was devoted to an enumeration of the advantages claimed for that machine. The chairman, Mr. W. C. K. Clowes, after mentioning some objections he had to the linotype for book work, said the want of a good distributing machine, not of a composing machine, was the difficulty. This might be got over by an apparatus of which he had heard, which was to cast types so cheaply as to make it not worth while to distribute them again. If this proved a success, set-up type, instead of being distributed, would simply be melted down after use."

STATE OF NEW YORK, COUNTY OF NEW YORK, SS.:

WILLIAM H. PERKINS, President, and WALTER M. BENNET, Cashier, of the Bank of America, a bank located and doing business at Nos. 44 and 46 Wall street, in the City of New York, in said county, being duly sworn, each for himself, says that the foregoing report is, in all respects, a true statement of the condition of the said bank before the transaction of any business on the 2d day of December, 1895; and they further say that the business of said bank has been transacted at the location required by the Banking law (Chap. 689, Laws of 1892), and not elsewhere; and that the above report is made in compliance with an official notice received from the Superintendent of Banks designating the 2d day of December, 1895, as the day on which such report shall be made; that deponents' knowledge of the correctness of the foregoing report is derived from a constant familiarity with and inspection of the affairs of said corporation, and that said report was prepared under deponents' personal supervision.

WILLIAM H. PERKINS, President.
WALTER M. BENNET, Cashier.

Severally subscribed and sworn to by both deponents, the 4th day of December, 1895, before me,

CHAS. D. CHICHESTER,
Notary Public.

BANKS.

NATIONAL

Shoe and Leather Bank

OF THE CITY OF NEW YORK,

271 BROADWAY.

Capital, - - - - $1,000,000

Solicits accounts, offering to depositors liberal treatment and every facility consistent with sound banking principles.

The Bank also acts as reserve agent for National Banks and New York State Banks.

JOHN M. CRANE, President.
JOHN A. HILTNER, Vice-President.
JOHN I. COLE, Cashier.

THE CHASE NATIONAL BANK,

OF THE CITY OF NEW YORK.

CLEARING HOUSE BUILDING,

Cor. Pine and Nassau Sts.

CAPITAL AND SURPLUS, ... $1,500,000

Receive accounts of Banks, Bankers, Corporations, Firms and Individuals, on favorable terms, and will be pleased to meet or correspond with those who contemplate making changes or opening new accounts.

H. W. CANNON, *President.*
WM. H. PORTER, *Vice-President.* J. T. MILLS, JR., *Cashier.* C. C. SLADE, *Ass't Cashier.*

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

C. P. FRALEIGH, - - - - - - - - Secretary.
A. WHEELWRIGHT, - - - - - - Assistant Secretary.
WM. T. STANDEN, - - - - - - - - Actuary.
ARTHUR C. PERRY, - - - - - - - - Cashier.
JOHN P. MUNN, - - - - - - - Medical Director.

FINANCE COMMITTEE:

GEO. G. WILLIAMS, - - - - Prest. Chem. Nat. Bank.
JOHN J. TUCKER, - - - - - - - - Builder.
E. H. PERKINS, JR., Prest. Importers' and Traders' Nat. Bank.
JAMES R. PLUM, - - - - - - - - Leather.

PROVIDENT SAVINGS LIFE

OF NEW YORK,

IS THE LEADING EXPONENT

of life insurance at the lowest rates consistent with absolute safety. It also issues the VERY BEST FORMS OF INVESTMENT INSURANCE which can be devised.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 18, 1896.

People hoping for prompt and helpful legislative action dealing with the financial situation have ceased to look to the Senate with any degree of confidence, but it is seldom, even in that body, that a measure makes its appearance containing so many possibilities of harm to the public interest as are embodied in the resolutions introduced by Senator Mills, of Texas, on Tuesday. These resolutions provide that the outstanding legal-tender notes shall not be retired, canceled or funded into interest-bearing bonds, but shall be kept in circulation; that the whole of the silver bullion now in the Treasury shall be coined as rapidly as possible—the coins from the seigniorage to be paid out in current expenses and the rest in the redemption of Treasury notes issued for its purchase; that whenever there is a deficit in the Treasury legal-tender notes shall be issued to meet current expenditures and shall be destroyed when returned to the Treasury; that all laws authorizing the sale of interest-bearing bonds shall be repealed; that it is the established policy of the United States not only to keep all kinds of money issued under its authority at par, but to require all creditors, public and private, to receive gold and silver coins in payment of all obligations where the terms of the contract stipulate for coin payment, and that it is the duty of the Secretary of the Treasury to pay United States notes in both gold and silver coin. It would be difficult to frame a policy which would do more to injure the public credit and to embarrass the Treasury than that outlined above.

In a strong address delivered at a dinner in Chicago on Thursday evening, Comptroller Eckels made another urgent plea for a reform of our monetary system. He declared that nowhere in any other nation, whether of great or little power, is there to be found a currency and financial system so inadequate for the purposes to be accomplished as that of the United States; that it presents in its circulation feature the singular spectacle of nine different kinds of currency, all except two being directly or indirectly dependent upon the credit of the United States, and that the Treasury Department, while the greatest banking institution in the land, is clothed with the least powers for self-preservation and beneficial action. As usual, Mr. Eckels's discussion of the subject of legal-tender retirement was vigorous. He said that it would be foolish to undertake to conceal that the source of our difficulty lies in the fear that the United States cannot in the face of existing laws maintain the gold standard as its unit of value, and he declared that the legal-tender issues of the government ought and must be redeemed and retired if the American people are to be rid of the recurring danger and loss arising from their being a part of our currency issues.

Of course the Comptroller recognizes that this result cannot be brought about without a struggle, and that it rests with the nation's lawmaking powers to say whether the people shall be freed from this "body of death" which bears upon them, or whether they shall continue to carry it. From those who stand within the inner circle of legislative action the announcement comes, he said, that nothing can be done unless concessions are made to interests, the harmful results of which no man can foretell. If such be the truth, he urges, the duty is placed upon every man who has his country's interests at heart and would put an end to the losses now entailed upon himself and neighbor to raise his voice in protest against either inaction or concession. This is true and timely language. The cause of sound money has made most notable advances during the last year, but the recrudescence of the silver agitation and the lodgment of some of its leaders in the control of the Finance Committee of the Senate should admonish the friends of a sound monetary and financial system that a period of active work lies before them.

With the view of securing the aid of the national banks in popularizing the new government loan, Comptroller Eckels has caused to be forwarded to the banks circulars inviting proposals for the bonds soon to be issued by the government. In order that offers for the same may be more intelligently made by those desiring to bid, there has been prepared by the Treasury Department a statement exhibiting the prices to be paid for the bonds in order to return to the investor certain rates of interest mentioned in the statement, and copies of this statement have been inclosed to the banks. It being the desire of the government that these bonds be distributed as widely as possible, and as they are of a character which affords to national banks especially desiring to obtain circulation thereon a long-time investment, their attention is called to them, both as to this particular feature and that of the general character of the investment. The Comptroller suggests that the national banks can materially aid the government in popularizing this loan by calling the attention of their patrons to the desirability of it as an investment and in stimulating subscriptions thereto, and he earnestly requests that they explain to their patrons in detail the manner of making bids and the terms thereof, thus giving them the fullest information upon the subject. In this manner it is believed that many of the people who might otherwise feel indifferent to such investment would see the advantage attached to it and wish to participate therein.

An effort is being made to do away with the conflict of jurisdictions in reference to the Northern Pacific receivership by means of an application to four of the justices of the United States Supreme Court, who would exercise controlling power in their various circuits if the cases were presented to them. These justices have been asked to recommend to the judges of the various circuits through which the road runs that some one court be designated as having primary jurisdiction. In behalf of the application the argument has been advanced that in consequence of the conflict of authority between the courts the road is practically threatened with dismemberment by the appointment of different receivers for every judicial circuit through which the road runs. The proceeding before the Supreme Court justices is a novel one as far as known, but that some such remedial action as that suggested may become increasingly necessary seems to be rendered clear by the history of the Northern Pacific receivership question.

A favorable report has been made to the Senate on a bill authorizing the delegates of the United States to the Washington International Marine Conference of 1889 to reconvene at the discretion of the Secretary of State. The conference of 1889 agreed on certain rules of the road to prevent collisions at sea, which rules have been authorized by law by the United States and by every other power taking part in their construction, except Great Britain, the English seamen objecting to some of the fog signals agreed on. For a long time the matter has been held in abeyance, owing to the slow movements of Great Britain and her refusal either to agree to rules or suggest changes. The matter is to be brought before Parliament by the London Chamber of Commerce at once, and it is expected that the full approval of all the nations will be given to the rules. In case, however, the British government should suggest further amendments to the rules, the reconvening of the conference is authorized by the bill so that the amendments may be speedily acted upon.

It is understood that a sub-committee of the Ways and Means Committee intends to devote some time to an investigation into the effects of the reciprocity provisions of the tariff law of 1890 upon the foreign trade relations of the United States. It is the belief of many members of the House that those provisions helped very materially to promote the foreign commerce of the country, and they hope that the results of the investigation will go to bear out their views and thus aid in the restoration of the policy of reciprocity. The field to be traversed opens up very considerable opportunities for debate, which may easily land the committee in the practically limitless domain of tariff discussion generally.

Legislation intended to do away with the evils of the sweatshop system is under consideration by the New York lawmakers. A committee appointed by the last legislature to investigate the condition of working women and children has submitted a report in which it reaches the conclusion that the evils of the sweatshop system and of tenement work can hardly be exaggerated. It recommends that no child under sixteen years of age be permitted to work in any manufacturing establishment, unless the Compulsory Education law is complied with and there is first obtained a certificate from the local board of health, stating that such board is satisfied that the child is of the age of fourteen years or upward and physically able to perform the work, and that the use of rooms in tenements by others than members of families living therein for the manufacture of certain articles be made a misdemeanor if allowed by the owner after notice. The committee confesses itself at a loss to suggest legislation which will remedy the evils of labor in the cigar factories.

A report was presented by the Senate Committee on Foreign Relations, on Wednesday, in favor of the passage of the joint resolution appropriating $75,000 for the expenses of the commission engaged in fixing the boundary between Alaska and British America along the line of the 141st meridian of west longitude. There was some objection to immediate consideration of the measure, but on Mr. Sherman's statement that the commission now at work would have to suspend operations unless the appropriation was given, the resolution was passed. This is one of the few recent instances in which the Senate has done the right thing with promptness.

THE BOND SYNDICATE'S DISAPPEARANCE.

The dissolution of the syndicate formed by Messrs. J. P. Morgan & Co. for the purpose of purchasing the new issue of United States government bonds was the financial event of the week. Such action was, however, expected, and did not cause any surprise. Mr. J. P. Morgan, however, accompanied his firm's formal notice, issued on Wednesday last, releasing the subscribers to the syndicate, with a personal letter, which gives in detail the steps he had taken in the matter and the reasons which influenced him. This communication has been widely printed in the daily newspapers, and therefore need not be quoted from at any length.

The principal points of the Morgan letter are that there was no arrangement, express or understood, between the administration and Mr. Morgan, and those whom he might associate with him in a syndicate, as to the placing of the bonds with them under terms similar to those made with the Belmont-Morgan syndicate in February, 1895. Mr. Morgan, however, states that his conviction, after his visit to Washington in December, was that Congress was unlikely to act, that the President and Secretary of the Treasury would use all means in their power to protect and maintain the gold reserve, and that their inclination was to secure, if possible, $200,000,000 of gold to make the position of the Treasury unassailable till a new Congress had been chosen and installed. Under these circumstances, he returned to New York and consulted other financial authorities, including Messrs. John A. Stewart, president of the United States Trust Company; James Stillman, of the City National Bank; E. D. Adams, representing the Deutsche Bank of Berlin, and Messrs. Harvey Fisk & Sons. Their coöperation having been secured, the syndicate was rapidly formed, the applications exceeding its framer's expectations, a total of $200,000,000 having been reached in a few days. At the same time, as the London market was closed to our bonds, negotiations were opened with financial institutions on the continent, and practically concluded for the placing of a large amount of bonds in those countries.

The announcement of the bond issue hanging fire, a letter was addressed to the President by the head of the syndicate on January 4, setting forth the serious nature of the crisis, and stating that the syndicate stood ready to supply the Treasury with 11,500,000 ounces of gold, approximating in value to $200,000,000, on the terms of the contract of February, 1895, and pledging its support to the Treasury. The only answer to this, apparently, was the issue of the Treasury circular of January 6 for the sale of the $100,000,000 issue by public subscription, with the privilege to the successful bidders of taking an equal amount if its issue should be determined on in the future.

The fact that the syndicate agreement provided that its bid should be for "all or none" of the new bonds, and that pubiic subscriptions had already assumed a magnitude which promised to absorb the greater portion of the issue, seem to have been the factors which determined the fate of the syndicate. Mr. Morgan, in his letter, states that he had encouraged subscribers to the syndicate to put in individual bids, and that from present indications he was convinced that the loan would be a success. Under these circumstances the continuance of the syndicate was deemed unnecessary.

Before this statement was issued it was known that some of the subscribers to the syndicate, both individuals and corporations, had determined to withdraw. This action was presumably influenced by the certainty that their subscriptions through the combination would be scaled down even if, as was hinted in some quarters, there should be a modification of the agreement with the Messrs. Morgan, making the syndicate bid to cover such portion of the bonds as should be unsubscribed by the public instead of for "all or none."

It has been stated above that the street and the public were not surprised. Nor was there any evidence that the disappearance of the syndicate created apprehension as to the success of the loan. It is well understood that the banks, corporations and individuals associated with Mr. Morgan will generally renew their applications for bonds directly to the Treasury. At the same time there is a feeling in financial circles that the dissolution of the syndicate is unfortunate, as it involves a disruption of the forces which by joint action would not only have insured the complete success of the loan, but have effected it with the least possible degree of friction or disturbance of the money market. The Treasury, it is urged, needs gold, and the syndicate is composed of those who either have it or can obtain it with the least influence of a disturbing nature. At present, instead of being concentrated, this element is divided into separate interests, whose independent action may be calculated to increase the pressure and uncertainty under which the money market labors at present to the injury of business. These forebodings, it may be observed, have not borne fruit as yet, except so far as there is an appearance of firmness in the money market with a demand for gold, which is shown in the fact that supplies not taken from the Treasury were quoted at ½ per cent. premium bid, and were not offered at less than ⅞ to 1 per cent. premium. The withdrawal of gold from the Treasury also continues, whether for hoarding or for use in subscriptions to the new bonds cannot be determined. The gold exports this week are $2,700,000 in amount, but the Treasury gold reserve, in spite of receipts of some scattering amounts in exchange for legal tenders, has fallen from $58,354,101 to $53,994,075.

The effect on the money market of the preparations to bid for bonds and to secure gold for the purpose is what the financial public fear. The disappearance of the bond syndicate as underwriters of the new bond issue is not considered a practical evil. Secretary Carlisle is apparently alive to this danger, and on Thursday last a new circular was issued by the Treasury making the payment on allotments of the bonds 20 per cent., the balance to be paid in installments of 10 per cent. each fifteen days thereafter. This is generally construed as relieving the situation, though there are some who claim that some further concession should be made by which a portion of the money subscribed should be allowed to remain in the banks, and be gradually and carefully withdrawn as the requirements of the Treasury and the state of the money market make it advisable.

RELATIVE RAILROAD RATES TO COMPETING LOCALITIES.

In a decision rendered a short time ago by the Interstate Commerce Commission, that body took the ground that the word "line," as used in the Interstate law, means a physical line and not a mere business arrangement, and that carriers are prohibited from charging through rates on traffic over a line formed by the connection of two or more roads which are less as a whole than the rates in force on like traffic carried under similar conditions in the same direction over either of the constituent roads in such line. The commission also held that while the share which a carrier receives out of a joint or through line over a line of which its road is a part is not necessarily the measure of reasonable rates by such carrier for a similar length of haul over its own road, it is proper, in any case under the statute, to use the aggregate joint or through rate in force over such a line as a basis of comparison in determining the legality of rates charged by such carrier over its own road.

The decision was rendered upon a complaint growing out of the fact that the rates charged by two defendant railroads, the Chicago, Rock Island & Pacific Railway Company and the Burlington, Cedar Rapids & Northern Railway Company, for the transportation of various classes of freight from Chicago, Ill., to Sioux Falls, S. D., after being the same as those from Chicago to Sioux City, Iowa, were substantially increased, as the complainant alleged, unreasonably, to the detriment of shippers and others doing business at Sioux Falls. Among other things, it was shown that the distance over the connecting roads from Chicago to Sioux Falls was at least sixty miles less than the distance over the same connecting lines from Chicago to Sioux City. In answer to the complaint the defendant roads averred that the distance to Sioux City was greater than that to Sioux Falls only over their roads, but that over all other roads Sioux City was at a less distance from Chicago than Sioux Falls, while one of them, the Chicago, Rock Island & Pacific, averred that the line from Chicago to Sioux Falls, composed of its road and that of the Burlington, Cedar Rapids & Northern, was a separate and distinct line from the line between Chicago and Sioux City, composed of the roads mentioned and that of another defendant, the Sioux City & Northern Railroad Company, and therefore that the act did not apply.

The commission took the view, after looking into all the circumstances in the case, that approximate justice would be secured if rates from Chicago to Sioux Falls were limited to 104 per cent. of the rates contemporaneously in force from Chicago to Sioux City. Complaint was also made of increased rates from Duluth to Sioux Falls as compared with those to Sioux City, and as to these the commission determined that such excess was unreasonable.

THE LONDON MARKET AND THE TRANSVAAL DIFFICULTIES.

A surprising feature of the recent revolutionary outbreak in the South African republic is the comparative steadiness of Transvaal gold-mining shares in the London market, and the readiness with which the values of such securities recovered ground after Jameson's raiders had been defeated and order restored at Johannesburg. That the drift of sentiment in the London mining market is in favor of the "Uitlander" agitation in the Transvaal there can be doubt. This, indeed, is simply a reflection of the feelings which animate the foreign miners resident in that country. Their views were well expressed in a letter from the able Johannesburg correspondent of the London *Statist*, written before the émeute culminated, which says: "The whole difficulty appears to lie in the fact that the existing rulers cannot conceive the changes that have occurred since, from being a pastoral country, inhabited by a semi-nomadic population, the Transvaal has become the home of a magnificent and constantly growing industry, and of energetic, enterprising, wealthy and settled inhabitants. Whether they will ever become conscious of the fact remains problematical."

As the same journal says, commenting on the market of two weeks ago, when very stirring events were actually going on in South Africa, the declines of mining stocks caused thereby were dangerous, because they followed a very heavy previous depression that had been in many cases excessive. It goes on to say: "The leading South African issues in which there is a free market have, as shown in the table below, fluctuated immensely during the past twelve months. There was, as is well known, a very great advance in prices, and the reaction from such advance has been to an enormous extent. The lowest prices of Thursday, January 2, when the important information as to the advance into the Transvaal of Dr. Jameson's force precipitated a further fall, are those given in the last column, and the margin between the top quotations and the lowest of Thursday represents a collossal percentage setback. In making any contrast between prices current a year ago and the lowest this week, recognition must be given to the amount of development work that has been done, and to the evidence afforded during the year of the increased profitable character of the enterprises in the Transvaal. In one or two cases comparison is impossible, because the concerns were not in existence a year ago.

	Price Jan. 2, 1895.	*Highest price,* 1895.	*Lowest, January,* 1896.
East Rand	2 9-16	12¾	3½
Glencairn	3¾	4⅞	2½
Randfontein	20s. 6d.	4⅞	1⅝
Goldfields Deep	3⅝	14	4¾
Rand Mines	21½	45½	17½
Barnato Consols	....	5 11-16	1½
Cons. Goldfields	....	19⅝	8⅛
S. A. Gold Trust	4	12¾	6¾
Barnato Bank	....	4¾	1
Johannesburg Investment	2¾	6⅞	2¼
Chartered	42s.	₤ 13-16	3⅛
De Beers	19⅜	32½	21

The argument is, however, advanced—and the subsequent improvement in the market would show that it had weight with speculative interests—that the worst possible contingencies short of an absolute cessation of work in the Rand mines had been more than discounted. The *Statist*, in fact, proceeds to say: "We are of opinion that eventually, through force or through redress being granted and grievances removed, the outcome must be improvement in the economic conditions, and while there undoubtedly will remain the discomfort of soreness and friction between the Uitlander and Boer parties, this soreness will gradually disappear, particularly if there is resumption of business activity. * * * Not a few persons have been alarmed by silly talk about the Boers taking steps to destroy mining property in case of resort to arms. If mines were house property, and contending armies by bombardment were destroying such property, the loss would be a certain one; but, even with many conflicts in the mining area, the gold in the ground would remain, the shafts and levels of mining companies would still exist, and damage would be in respect of the surface equipment. Is it conceivable that the Boers would lay themselves out to wantonly destroy mining plant? Of course, it is out of the question that the Uitlanders would do so. Apart from the common sense of the subject, there

is the expediency of the Boers offending their continental friends, for in the destruction of mining property they would be interfering with the prospects of a great number of French, and to a less extent German, investors in South African mines. This point leads up to the subject of whether or not, in deference to at least that portion of the capitalists who have supported the Transvaal, concessions will not be made to ameliorate the mining and general commercial situation and reforms of police, etc., inaugurated. While the prospect of the franchise question may be further deferred, the probability is that modifications of monopolies and duties will be effected, to the benefit of the mines."

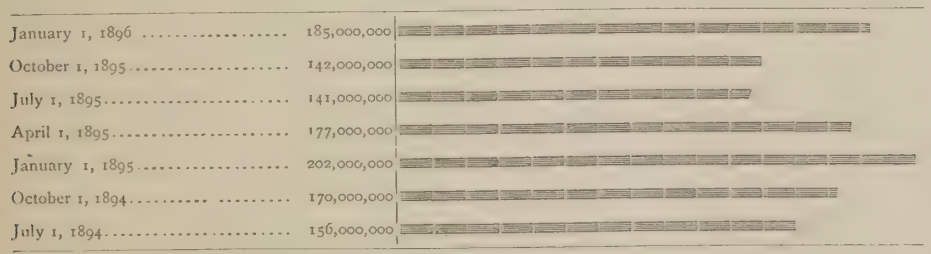
An interview, published in London, with Mr. J. B. Robinson, the most prominent representative of South African money interests and the largest employer of labor in the Rand, also deserves quotation. He stated: "I feel sure that the matter will be amicably arranged, and that Sir Hercules Robinson will be able to restore order, and that the Uitlanders, through him, will be able to convince the Transvaal government that their cause must be listened to and redress given, so as to make them peaceful and contented citizens of the South African republic. There is no doubt that the imperial government is doing its utmost to bring about a settlement on fair and equitable lines, and that the Transvaal government will realize how necessary it is that the Uitlanders' grievances should be redressed, and that they should be dealt with in a proper spirit."

It is noticeable, however, that the London market reflects to a degree the general belief that one of the results will be the revocation of the Chartered Company's charter, or at least the limitation of its functions to those of a mere exploring, mining and commercial organization. The experiment of inaugurating an East India company in South Africa, with no lack of Clives and Warren Hastings, has been a troublesome failure, and the assumption of direct control of its possessions by the crown is conceded to be the only possible solution.

SOME WHEAT SUPPLY TOTALS.

The calendar year 1896 opened with somewhat of a surprise for the various leading wheat markets. The day when prices of wheat shall advance from the low level which has characterized them for three or four years has long been waited for, and the fact that an upward turn set in recently, in view of short domestic and foreign supplies last autumn, was not unexpected. But that the advance should be maintained and shown to be due to increasing export demand rather than to scarcity of supplies in this country was what the trade had hardly looked for. The strength of the cereal abroad is, of course, largely based on unwillingness of Russian holders to part with their wheat at the present range of prices, to the entire absence of supplies of wheat for export in Australia, and the prospect of smaller stocks for shipment in the Argentine Republic.

So anxious have the trade in the United States been during the past two or three years to see the price of wheat advance that a small crop has been regularly predicted each year, and as regularly has failed to materialize. The government crop report for 1895 began by putting the total probable outturn at 390,000,000 bushels or thereabouts, while the latest reports to the government are said to indicate a probable domestic wheat production of 460,000,000 bushels, and it would not be at all surprising if it were found at the end of the season that we produced 500,000,000 bushels last year.



The period in which the alleged shortage in the American wheat supply of 1895–96 appeared greatest was during September and October last, when the grand total of supplies of wheat available in the United States, Canada, in Europe, afloat for Europe, plus interior Russian stocks not heretofore counted, showed heaviest shrinkages as compared with corresponding totals in the year before. Thus, while the falling off in supplies available was only 15,100,000 bushels smaller on July 1, 1895, than on the corresponding date 1894, the falling off in the grand total of the world's available stocks by August 1 had increased to 19,100,000 bushels, and by September 1, 1895, there were 29,300,000 bushels less wheat in sight than one year before, and on August 1 28,100,000 fewer bushels than on October 1, 1894.

But during the months of October and November heavy shipments of wheat were made by producers, so that by November 1 total stocks of wheat afloat for Europe, at European ports and at interior Russian points not heretofore counted, plus supplies in Canada and in the United States, showed a falling off of only 21,900,000 bushels as compared with November 1, 1894, and this shrinkage was still further reduced on December 1 last, when it amounted to only 19,260,000 bushels less than on the corresponding date 1894. On January 1, 1896, the world's supply of wheat available was ouly 17,180,000 bushels smaller than one year before.

A specially prepared tabular exhibit containing totals of wheat available here, in Canada, in Europe and afloat for Europe is presented in this connection, from which the foregoing calculations are made.

If to the totals already given stocks of available wheat in Australia be added at quarterly dates last year as compared with the year before, it is found that on July 1, 1895, the decrease in supplies of wheat available, as described in preceding paragraphs, plus the stocks held in Australia, was 17,600,000 bushels compared with July 1, 1894. For October 1 last the falling off had increased to 29,100,000 bushels, but on January 1 this year the decrease was only 17,100,000 bushels, thus indicating that the world's wheat supplies on January 1, 1896, were no smaller as compared with the like total one year ago than were the supplies held on July 1, 1895, as contrasted with one year previously.

RELATIVE SIZE OF TOTALS OF THE WORLD'S AVAILABLE SUPPLIES OF WHEAT AT QUARTERLY INTERVALS SINCE JULY 1, 1894.

UNITED STATES, CANADA, EUROPEAN, AND AFLOAT FOR EUROPE AND RUSSIAN (ADDITIONAL) INTERIOR STOCKS OF WHEAT AVAILABLE (BUSHELS).

ORIGIN AND STATUS OF THE GOLD RESERVE.

A couple of weeks ago the Senate passed a resolution asking the Secretary of the Treasury whether the sum of $100,000,000 or any part thereof has at any time since the establishment of the so-called gold reserve been actually segregated or set apart from the other currency or money in the Treasury Department, in gold coin or gold coin and gold certificates, or either, for the redemption of the legal-tender notes and different forms of paper money of the government, and also when and how the gold reserve was established. The Secretary sent in a response to the request embodied in the resolution this week, and his statement is of interest as bearing upon a point that has been discussed more often from the standpoint of conjecture than of knowledge during the last few years.

In the first place, the Secretary informs the Senate that at no time since the establishment of the so-called gold reserve has the sum of $100,000,000 or any other sum been segregated or set apart from the general cash in the Treasury for the redemption of legal-tender notes of the United States, or for the redemption of any other form of paper money for which the United States is liable; that there is no provision of law requiring a separate fund or separate account to be kept, and that all moneys received into the Treasury, from whatever source, are deposited in the general cash.

The fund for the redemption of United States notes was, the Secretary recalls, accumulated under authority of the act of January 14, 1875, which directed the Secretary of the Treasury to prepare and provide for such redemption on the 1st day of January, 1879. No specific sum was prescribed, but the Secretary of the Treasury was authorized to use the surplus revenues from time to time and to sell certain descriptions of bonds to an extent necessary to carry the act into full effect. In the exercise of this discretion, thus conferred upon him, the Secretary sold for redemption purposes in 1877 and 1878 United States 4 per cent. and 4½ per cent. bonds to the amount of $95,500,000, and deposited the proceeds, $96,000,000 in gold, in the general cash in the Treasury. This, with other gold which had been received as surplus revenue, constituted the fund prepared and provided by the Secretary of the Treasury for the redemption directed in the act of January 14, 1875.

The existence of the reserve fund was generally recognized from the time of its establishment as above stated, and one of the measures adopted by the Secretary of the Treasury to prevent its unnecessary depletion was the discontinuance of the issue of the gold certificates authorized by the act of March 3, 1863, which act authorized but did not direct such issue. Owing to the fact that some inconvenience resulted from this discontinuance, the Secretary was authorized and directed by section 12 of the bank act of July 12, 1882, to receive deposits of gold coin and bullion and to issue certificates therefor; but it was provided "that the Secretary of the Treasury shall suspend the issue of such gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below $100,000,000. According to the Secretary, no other reference to the reserve fund is contained in the laws of the United States. It would seem clear from this statement that the gold reserve fund is not, as has sometimes been alleged in discussion, fixed by law, but that, as a matter of fact, its amount was mainly determined by the proceeds of the bond sales of 1877 and 1878, and that the only legal recognition of such an amount is contained in the provision requiring the suspension of the issue of gold certificates when the gold holdings for redemption purposes fall below the $100,000,000 mark.

THE READING COMPANIES' SHOWING.

The publication of the reports of the Philadelphia & Reading Railroad Company and of its Coal & Iron organization for the year ending November 30 follows close upon the announcement of the probable success of the reorganization scheme. So far as the latter is concerned, the danger of failure or delay in the execution of the plan has been virtually eliminated. As stated in these columns a week ago, the Olcott-Earle committee and the Messrs. Morgan & Co. recognized the danger to the arrangement involved in the unsettled and somewhat stringent money market. In view of this fact a concession was made to the holders of securities, which also facilitated the action of the underwriting syndicate. It involved an extension of the time for the payment of installments on the 20 per cent. assessments levied on the stock and income bonds where the securities were deposited on or before the 10th instant. The response to this, all things considered, was prompt and gratifying. Heavy deposits of all classes of the securities were made, and the depositories, Messrs. J. P. Morgan & Co., were able to state that about 85 per cent. of the combined stock, preference income bonds and deferred incomes had been turned in. Another important statement is that the few large interests which had been hostile to the plan have been successfully placated. According to published accounts the prospects of successfully combating the threatened foreclosure were not sufficiently encouraging to justify the formation of an opposition committee,

and as a result the stock and bondholders who still dissent from the propriety of the plan are apparently left in a hopeless minority. Under these circumstances the carrying out of the plan may be expected, possibly, without the necessity of a resort to foreclosure under the general mortgage of the company.

The annual report, as stated above, came out this week. Compared with the results of the fiscal years ending November 30, 1894 and 1893, respectively, it displays the following comparisons for both the Philadelphia & Reading Railroad and the Coal & Iron Company:

PHILADELPHIA AND READING RAILROAD COMPANY.

Year ending Nov. 30.	1895.	1894.	1893.
Gross earnings	$21,300,575	$20,344,775	$22,828,846
Operating expenses	11,628,411	11,278,989	13,369,423
Net earnings	$9,672,163	$9,065,785	$9,459,422
Other income	587,089	505,632	609,072
Total net revenue	$10,259,252	$9,571,417	$10,068,495
Net charges	9,922,066	10,478,823	10,675,188
Surplus	·$337,185	Def. $907,405	Def. $606,693
Coal & Iron Co.'s deficit	1,875,991	1,025,601	195,649
Tot. deficit of system	$1,538,805	$1,933,006	$802,344

PHILADELPHIA AND READING COAL AND IRON COMPANY.

Year ending Nov. 30.	1895.	1894.	1893.
Gross earnings	$24,080,798	$22,236,863	$24,586,868
Operating expenses	24,780,607	21,968,310	23,482,672
Loss	$699,809	Prof.$268,552	Prof.$1,104,195
Fixed charges	1,176,182	1,294,154	1,299,844
Deficit	$1,875,991	$1,025,601	$195,649

According to this it will be seen that the performance of the railroad company was satisfactory, but that this was more than offset by the heavy decrease in the net earnings of the Coal and Iron Company, the result of its operations being a loss of $699,809, against a profit of $268,552 in 1894 and one of over $1,100,000 in 1893. This points to the weak spot in the company's position for the past year, which, it is needless to say, is the condition of the anthracite coal trade. The Reading receivers have been, it is well known, fighting for recognition of the company's claim for an increased percentage of the total output of coal. They have succeeded in raising and marketing the largest amount of the mineral its mines have ever yielded in one year, but this has been at the expense of a total demoralization of the anthracite trade. The statistics furnished with the report show that the coal production from the Reading Company's lands was 8,633,214 tons for the year just ended, an increase of 575,171 tons, while its cost on the cars was $1.144 per ton, the lowest figures since 1879. The total sales of coal for the year are stated to have been 8,921,950, an increase of 969,486 tons, but owing to low prices the loss on this enormous amount of anthracite was $699,809, or 8.1c. per ton. It is evident that had normal prices been obtained for even a part of the 1895 output the balance at the close of the year would have been on the right side of the income account, even if full fixed charges of all kinds had been met.

How this showing, coupled with the success of the plan, will affect the anthracite trade remains to be seen. The bad condition of the coal business is unchanged. In fact, there have been further concessions in coal prices in the last week. No concessions to the claims of the Reading have been advocated by its competitors, who have shown an obstinacy equaled only by the aggressiveness of the Reading receivers. Under the latter's reorganization its obligatory fixed charges will amount to $8,226,000 per annum, which, as can be readily seen, will enable it to continue the fight on better terms, so that the events and showing to which references have been made above would seem to be cogent arguments for a pacification and settlement between the warring anthracite carriers and producers.

THE NEW HOME OF THE CLEARING HOUSE.

The formal dedication of the beautiful new home of the New York Clearing House Association took place on Wednesday of this week in the presence of representatives of nearly all the prominent financial and commercial organizations of this and other countries. The accounts and illustrations in the daily papers render superfluous any description of the building itself. It is only necessary to say that for beauty and strength the new building is all that could be wished for, and as far as the latter qualification is concerned it is typical of the association, which, after two years of waiting, has finally made the building its home. The dedicatory ceremonies were, as a rule, of the usual routine character. They included a brief statement of the work of the building committee by its chairman, Frederick D. Tappen, president of the Gallatin National Bank; an oration by J. Edward Simmons, also of the building committee, and president of the Fourth National Bank; the formal acceptance by William A. Nash, president of the Clearing House Association and of the Corn Exchange Bank. Remarks by the president of the Chamber of Commerce and a short address by Bishop Potter were also features.

In his oration Mr. Simmons was peculiarly happy in his treatment of the subject matter of his speech. A retrospect which he gave of the action taken by the Clearing House Association during the panic of 1893 was particularly good. The important effect exercised by the issuing of Clearing House certificates by the associated banks acting through their loan committee, practically as one gigantic bank, is too recent to need any description here. The quick retirement of those certificates when the purpose for which they were issued was fulfilled is likewise a matter of recent history. An interesting point brought out by Mr. Simmons was that the first day of November, 1893, which witnessed the retirement of the last certificate, also witnessed the signing by President Cleveland of the bill repealing the Sherman Silver Purchase law.

Perhaps the most interesting feature brought out by Mr. Simmons in the natural discussion of the present currency situation into which he was led in his oration was his calling attention to the fact of how little actual currency is, at any time, necessary to discharge the balances which are found existing at the Clearing House after the usual exchanges of checks and other securities have been made. The total transactions of the Clearing House from October, 1853, to October, 1895, amounted to the sum of $1,092,815,818,055. The balances found necessary in connection with this almost fabulous total were but a little more than 4.5 per cent. of the clearings, and even these balances were discharged, not in currency, but principally by certificates on a common depositary. Of the total clearings in 1883, as pointed out by Mr. Simmons, one-half of 1 per cent. of the balances and less than one-fiftieth of 1 per cent. of the clearings were paid in legal tenders or coin. This illustrated the point that Mr. Simmons made as to how insignificant a rôle currency plays in the great mass of business represented by our bank clearings. No better argument could be advanced against the senseless outcry by the free-silver advocates, who maintain that the prosperity of the people depends alone upon the existence of a plentiful currency, whatever its intrinsic value. It is questionable, however, whether the convincing argument above mentioned could be submitted with either safety or profit to a majority of the financial quacks who seem at present to control the law-making power of these United States.

PRELIMINARY FOREIGN TRADE FIGURES FOR 1895.

Preliminary figures for the foreign trade of the United States for December and the twelve months ending therewith have just been issued by the Chief of the Bureau of Statistics of the Treasury Department. These figures, which are corrected to January 15, show that the exports of merchandise for the month of December amounted to $92,565,503, which represents an increase of nearly $7,700,000 as compared with the corresponding month of the preceding year. The imports for the month were valued at $62,207,357, which represented only a nominal increase over December, 1894. For both months the dutiable imports slightly exceeded in value those free of duty. There was an excess of exports over imports amounting to over $30,300,000 in December last, and to over $22,700,000 in December, 1894.

For the twelve months of 1895 the exports of merchandise showed a remarkable approach in value to those for the preceding twelve months. They amounted to $824,896,522 in 1895 as compared with $825,102,248, a decrease, as will be seen, of only a little over $200,000. The domestic exports in 1895 were valued at $807,775,849, an increase of a little over $460,000 as compared with the preceding year. The imports for the twelve months of 1895 were valued at $801,626,638, which represented an increase of over $125,000,000 over those for the preceding year. The non-dutiable exceeded the dutiable imports in value by over $90,000,000 in 1894, whereas in 1895 the dutiable exceeded the non-dutiable imports by over $32,000,000. In both years there was an excess of exports over imports, but the excess amounted to only $23,269,884 in 1895, as compared with $148,789,307 in 1894.

The exports of gold in December last were valued at $15,481,347, an increase of over $5,600,000 as compared with the corresponding month of 1894. The imports were valued at only $1,311,048, an increase of over $900,000 as compared with the corresponding month of the preceding year. The exports exceeded the imports by $14,170,299 in December last, and by $9,424,439 in December, 1894. These figures are for coin and bullion, the exports of ore being comparatively trifling, and the exports only amounting to $92,918 in December last. The exports of silver coin and bullion for the month of December last were valued at $5,159,537 and the imports at $870,759, as compared with exports valued at $3,691,288 and imports valued at $788,010 in December, 1894. The excess of exports amounted to $4,288,778 in December, 1895, as compared with $2,903,278 in the corresponding month the year before. Imports of ore showed an excess of $1,114,241 in December last, and of $929,008 in December, 1894.

Exports of gold coin and bullion for the twelve months of 1895 were valued at $104,605,023, an increase of nearly $2,800,000 as compared with those for the preceding year. The imports were valued at $32,539,336, an increase of over $11,900,000 as compared with those for the preceding year. The exports of gold showed an excess over the imports of $72,065,687 in 1895, as compared with an excess of $81,212,363 in 1894. Exports of gold ore for the year 1895 were valued at $361,315, as compared with $29,811 in 1894. Exports of silver coin and bullion were valued at $53,833,153, an increase of nearly $6,800,000 as compared with 1894, and imports were valued at $11,273,277, an increase of over $1,400,000 as compared with 1894. The excess of exports amounted to $42,559,876 in 1895 and $37,219,797 in 1894. The exports of silver ore were comparatively trifling, amounting to only $368,351 for the year, but the imports amounted to $12,610,327, an increase of over $4,800,000 as compared with the preceding year.

GOVERNMENT DISTRIBUTION OF DOCUMENTS.

It is well known that the government of the United States maintains one of the greatest printing establishments in the world, but without some special knowledge of the subject it is difficult for anyone to form an accurate estimate of the amount of work done by the Government Printing Office. Some idea of its proportions may be gathered from an account of the work done for a single department, which appears in the annual report of the Chief of the Division of Publications of the Department of Agriculture, copies of which have just been distributed. For the Department of Agriculture alone the Public Printer last year issued 254 publications, comprising, exclusive of reprints, 14,381 pages, and of these publications 4,100,660 copies were printed.

In order to show those curious to know in detail how much reading matter this aggregates for distribution, Mr. Hill, the chief of the division, has prepared a statement showing that a multiplication of the number of copies of each publication by the number of pages it contained gives an aggregate of printed pages amounting to nearly 420,000,000, each page averaging slightly more than 500 words, being more than six printed pages of matter issued from the Department of Agriculture for every man, woman and child in the country, and distributed, almost without exception, free—a fact which it is suggested detracts very greatly from their value. Not only was this enormous mass of printed matter given practically free of cost to everyone who asked for it, but each publication was, moreover, mailed free of cost to the applicant wherever he might be. The liberality of the national government in this respect may be better appreciated when it is known what a weight of matter is represented by its publications. The weight of the annual report on agriculture alone (averaging nearly 40 ounces per volume) considerably exceeds 600 tons. As this publication aggregates 304,000,000 pages and the remainder of the department's publications aggregate 116,000,000, it is thought a reasonable estimate, even allowing for the difference between the board cover of the report and the paper covers of most of the other publications, to add at least one-third to the weight of the annual report in order to arrive at the total weight of publications, which would thus appear to be over 800 tons. These, Mr. Hill says, may seem trivial details, but it may be well for some people to study them and realize what is involved by an absolutely free distribution of all government publications.

To arrive at the total cost of the printing done for the department for free distribution, it would be necessary to add the

cost of the printing office at the Weather Bureau, which is not yet available, and the cost of printing the publications issued as executive documents, information which can only be obtained from the Public Printer. It is known, however, that the special appropriation for printing the half million copies of the annual report distributed yearly has for some years past amounted to $300,000; that $30,000 has similarly been appropriated for the report of the Bureau of Animal Industry, and for other special reports in proportion, and, judging by the cost of the printing office of the Weather Bureau in the past, the annual cost of printing the publications of the department very largely exceeds $400,000 on an average; some years, indeed, it has exceeded half a million. If the cost of distributing the documents be added, including the labor and clerical work in the department, and the cost of carrying the enormous weight of documents through the mails, this sum would undoubtedly be found, Mr. Hill says, to average over $600,000; for, taking the cost of transmission to be the postage charge on book matter, this charge alone on the more than 800 tons of matter published for distribution would amount to about $130,000, while the cost of handling, including both labor and clerical work, would bring up the cost of distribution to $160,000 or $170,000—this sum to be added to the cost of printing.

For a long time criticism has been made of the waste of public documents, and hence of public funds, which results from existing methods of distribution. It is certain that as things are at present neither the government nor the people derive results from the expenditure for public documents proportionate thereto, and that while many of the executive officials concerned are aware of the need of a reform in the matter, they must rely on legislative action to help them in bringing about a reform. There are many abuses growing out of the system of free distribution in particular, and it is not singular that the official whose report is under consideration should renew his already reiterated recommendation that the head of the department be authorized to charge a reasonable price for public documents issued by it.

MASSACHUSETTS SAVINGS BANKS.

The Massachusetts Board of Commissioners of Savings Banks have made part of their report to the legislature of that state, that relating to savings banks, institutions for savings, and safe deposit, loan and trust companies. It covers reports from 187 savings banks and institutions for savings, with assets of $466,426,722; 32 trust companies, with assets of $119,043,157; 1 trust company in hands of receiver, and 1 savings bank in hands of receiver. The report is of special value, aside from the interest which attaches to it merely as a record for one state, because of the indication afforded of economic conditions prevalent last year and year before in a state in which the development of industrial and commercial life ranks second to that in none other. It appears that in seven of the banks referred to that dividends have been reduced below 4 per cent. per annum.

What the result of such a reduction might be was a matter of doubt and discussion among savings bank officials, and, as a matter of interest in connection with the subject, the following presentation of facts is offered. The deposits and withdrawals in one of the seven banks were so much affected by local business matters that the statistics of this particular institution are not taken into account in the consideration of the question. In the other six banks the number of deposits made during the year ending October 31, 1895, was 299,696, as against 270,165 the preceding year; the amount deposited was $18,617,862.86 in 1895, as against $18,861,610.99 the previous year—an increase in number of 29,531 and a decrease in amount of $243,748.13 in 1895 as compared with the previous year.

The average of the deposits in 1894 was $69.81; in 1895, $62.12; this would appear to indicate that the reduction in rate of dividends did not deter the smaller depositors, for whose benefit the banks are intended, from making deposits, so much as it did larger ones, who have heretofore taken advantage of the banks to secure a larger net return than could be obtained from most other equally safe investments. In the same banks the withdrawals in 1895 were 259,463, amounting to $19,084,582.05; the withdrawals in 1894 were 243,107, amounting to $18,049,674.85, an increase in number of 16,356 and in amount $1,034,907.20, the average sum withdrawn being in 1895 $73.51, as against $74.24 in 1894. The fact that the average of the withdrawals in all the banks of the commonwealth was $77.23, or $3.72 more than the average in the banks referred to, is an added proof that these banks are being used by the class of smaller depositors. The six banks referred to are in Boston or its suburbs. The Springfield *Republican*, in commenting on this showing, says: "Whether the same results would follow a reduction of dividends in banks located more remote from business centers must still be a matter of conjecture."

The statement of liabilities shows an increase in aggregate deposits of $22,491,843.62, the largest (with the exception of 1892) in any year since 1878, and an excess over the increase of 1894 of $5,709,395.90. The total number of open accounts by which the aggregate deposits of $439,269,861.15 are represented on the books of the banks is 1,302,479, an average to each account of $337.25. Last year the average was $334.20, and the total number of open accounts was 1,247,090.

The number of deposits made during the year was 1,214,171, the amount deposited being $80,768,468.89, an average of $66.52 to each. As compared with the previous year, these figures indicate an increase of 169,522 in number and of $5,821,898.88 in amount of deposits, and a decrease of $5.22 in the average, which tends to prove that it is the persons of limited means who are now seeking savings banks as the depositories of their savings. The number of withdrawals during the year was 962,205 and the sum withdrawn $74,309,785.76, an average of $77.23 to each, a decrease in number of 6,372, an increase of $185,088.43 in amount, and of 70c. in the average as compared with the year preceding. The amount deposited exceeded the amount withdrawn by $6,458,683.13.

Dividends to the amount of $16,025,893.44 have been credited to depositors during the year, an excess of $254,929.55 as compared with the previous year. The total assets of the banks are $466,426,722.72, an increase from last year of $24,035,457.91.

There are now 21 banks in which the guaranty fund has reached the limit fixed by statue, to wit, 5 per cent. of the deposits. Some of these banks, after the statutory limit had been reached, have continued at each dividend period to add to such fund "not less than one-eighth nor more than one-quarter of 1 per cent. of the deposits," until in some instances it has reached an amount considerably in excess of the limit. The question of the legality of such action has been submitted to the attorney-general, who gives it as his opinion that "savings banks have no right to maintain and hold more than 5 per cent. of the total amount of the deposits under the provisions of that section."

The opinion of the board remains, as expressed in previous reports, that too many trust companies have been incorporated. They also deem it advisable if a further increase is to be made in the banking capital of the commonwealth that some provision should be made to permit the organization of banks of deposit and discount, but that they should not bear the name nor be entitled to the extended powers and privileges of trust companies; the name "trust company" in itself indicates, and is generally understood to mean, they say, that the institution bearing the name is something more than simply a commercial bank. The board is also of the opinion that if any more trust companies are incorporated the capital should be fixed at a sum of not less than $500,000. The enactment of laws bearing upon these questions is recommended.

BALTIMORE & OHIO'S FUTURE.

There is a tradition of the stock market that the tape quotations for a railroad company's securities are the best indication of whether it is financially prosperous or not. The "street" also has an unpleasant way of talking of "receivership prices" when the stock of a corporation has a marked tumble in value. The decline in the price of Baltimore & Ohio common from 66 in September last to 32½ recently seems to the stock market a case in point. Moreover, as the drop of the last 12 points or so took place in about four days last week, there was all the more disposition to put the worst possible construction upon the situation, and to give the fullest weight to whatever unfavorable news or criticism has appeared of late in reference to the corporation in question. It is true that earnest denials have been made by the company's officials of the really disturbing rumors which this downward movement caused. The statement that the January interest would be met, and that no closing out of the company's loans or sale of the collateral therefor was to be apprehended, had some effect, and has steadied the price for the stock.

The actual facts in relation to the Baltimore & Ohio Company are that a change in both management and methods has been demanded. It was noted in these columns several weeks ago that the time-honored policy of admitting only Baltimore interests to a representation in the board of directors had been overthrown, and that four gentlemen representing the New York and London stockholders had been elected. This was followed, when the organization of the new board came, by the news that the president of the company, Mr. Mayer, had announced his intention of retiring as soon as a successor was chosen. Since then there appears to have been a deadlock. According to current reports a portion of the board advocate the election of an outside railroad man of high reputation, while another element favor a delegation of powers to the board itself, various committees taking active charge of details of executive work. The existence of a floating debt of some $4,000,000 is admitted, though it is declared by the officers that there is no real trouble in this connection.

The true reason for the decline in Baltimore & Ohio shares is not to be found in these incidents. It is the result of a steady outpouring of criticism upon the policy of the company, and of the belief that a very considerable expenditure of capital will have to be made before the property can rank with the other leading trunk lines or handle business at the low rates which competition now enforces. Several extended articles in which these ideas are embodied have appeared of late, and in journals which cannot be justly suspected of having any desire to aid a mere bear onslaught upon a corporation's credit with a view to depressing its stock. It has been pointed out that in respect to terminal facilities the Baltimore & Ohio is deficient, that equipment must be provided on a large scale in the near future, and that though great progress may be noted since its former antiquated managment was displaced in modernizing the physical condition of the property, only a commencement has been made. It is also claimed that the expenditure upon the tunnel and belt line through the city of Baltimore and the new station there have greatly exceeded the estimates, and that the outlook is for very heavy calls for capital in many respects. This, under present financial conditions, is far from reassuring, and would make the prospects of a resumption of dividends somewhat remote. Without, therefore, giving too much credence to the ultra-unfavorable views which the "street" was so ready to adopt, it would seem that the Baltimore & Ohio management has stiff work cut out for it, and that its financial future will call for the exercise of the utmost skill.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

A special committee was constituted by the last Assembly of New York state to examine into the question as to the best method of promoting the work of road improvement by legislative action. This committee has now submitted a report as the result of investigations carried on in the states of Connecticut, Massachusetts, Pennsylvania and New Jersey, as well as in various parts of New York state. The report makes several suggestions of interest. It recommends in the first place that there be at Albany a central head, which shall act in an advisory capacity and shall have the superintendence of all roads hereafter built, the prime idea being that the maximum of utility shall be reached with the minimum cost. It is also recommended that there be a wide-tire law throughout the state, to take effect in the year 1900, and regulating the width of tire to the weight carried, and that the convicts in the state prisons be utilized for the purpose of manufacturing the material for roadbeds at the prisons.

Regarding details of legislation and administration affecting road reform, it is suggested that state aid to the amount of one-third shall be given, subject to certain conditions and restrictions, and that the initiative may be taken by three alternative methods—(a) upon the petition of a benefited district paying one-third, the county one-third, and the state one-third; (b) upon a petition of the town, or by a resolution duly passed at any annual or special town meeting, in which event the town, county and state shall each pay one-third, and (c) upon a resolution of the board of supervisors petitioning for a county road, of which the county is to pay two-thirds and the state one-third. Finally, it is recommended that the number of road officers be decreased, that there be one commissioner of highways only in each town, who shall act in connection with the town board, and that the present wretched "pathmaster" system shall be abolished, and the money system of taxation for highway purposes be used throughout the state. Bills to carry into effect these recommendations have been prepared by the committee. The suggestions, it will be seen, aim to combine the elements of state and local action, but it would be well to include a provision allowing the initiative to be taken upon the suggestion of state as well as of local officials.

Matters relating to the Indians are going to occupy the attention of Congress and the Executive for awhile. Secretary Smith has requested the members of the Dawes Indian Commission, appointed to treat with the Five Civilized Tribes, to report immediately at Washington, to confer with the Senate and House Committees on Indian Affairs regarding their report on their work in the Indian Territory, and their recommendations for a change of the form of government and allotment of lands in severalty. The delegates of the Cherokee Indian Nation, who are at present at the capital, have left with the President and with Secretary Smith a memorial protesting against the conclusions of the Dawes Commission. In this memorial the delegation says "the commission judged us from afar without a hearing from us, and condemned us out of the mouths of our enemies. They attempted to induce the Cherokee people to make certain changes looking to ultimate statehood, and again using as an inducement and argument the final and complete removal of intruders from our country. We hold our lands and money in common, and in the light of past experience it would be criminal on our part to enter into further negotiations until we are prepared to definitely determine for ourselves the heirs to our estate, and be placed in full possession. Otherwise endless litigation would be the result and the outcome easily foretold. The full-blooded Cherokees, as a class, would be reduced to destitution and beggary. No action on the part of the Cherokees can be reasonably anticipated until this vexed question is first settled."

In an interview with a representative of a press association ex-Congressman Coombs, who is one of the government directors of the Union Pacific Railway, urges the foreclosure of the government's mortgages on the Union Pacific and Central Pacific railways. He urges that if the government should foreclose its mortgage on both roads, and the property were placed in condition to be sold, it would afford a good investment and ample security on an issue of $140,000,000 of 5 per cent. bonds. The net earnings of the main lines of the Union and Central Pacific roads in the worst year of their existence—the last fiscal year—with the Central Pacific in the hands of its competitor, the Southern Pacific, exceeded, he says, $7,400,000. It would require about $33,000,000, exclusive of the sinking fund, to pay the first mortgage bonds on both roads, leaving over $100,000,000 which could be made applicable to the payment of the government's debt, and would take probably from $5,000,000 to $10,000,000 to force an entrance into San Francisco against the opposition of the Southern Pacific. There is no doubt in his judgment, Mr. Coombs says, that several great eastern lines which desire to extend their systems to the Pacific coast would bid for the bonds if they were sold by the government, and if not private parties would stand ready to take them.

Congress has at present before it for consideration the question as to the expediency of incorporating international American banks in compliance with the recommendations of the International American Conference. At a hearing before the House Committee on Banking and Currency this week Comptroller Eckels appeared in advocacy of the proposition. He said that the object of the measure was to give our merchants the advantages of foreign exchange. The idea was, he thought, a good one, and he could see no objection to incorporating the banks if it could be done without interfering with the legitimate business of our national banks. In response to the question whether or not Congress could grant the privilege asked, Mr. Eckels said that he knew of no objection based on constitutional limitations to Congress granting the privilege. Congress, of course, he said, could not legislate for foreign countries, and the corporations would have to look to such countries for rights. England, however, had placed branch banks in almost every country in the world, and if England could do this the United States certainly could. The representatives of foreign governments in the American Conference had given assurances that their countries would allow and encourage the branch banks proposed by the bill, so that the objection as to the extent of the power of Congress seemed to have little or no application to the main point at issue. The subject is to be still further considered by the committee.

The San Francisco *Chronicle* has special information from San Diego as to important railway building enterprises on the west coast of Mexico, from which the conclusion is drawn that another year will see the completion of a road to the ports of Tepic and Mazatlan, and possibly San Blas. It is learned that the Central Railway is about to be extended to a Pacific port, either Mazatlan or San Blas, probably the former. The country between Guadalajara and San Blas is full of tremendous barrancas which have thus far defied the highest engineering skill, and railroad builders, after attempting repeated surveys, have given up the task, calling that strip of country the roughest in North America. The present plan is, therefore, to avoid this section and work northward from the port of Tepic. The Central, after reaching Tepic, will then extend its line north and northeasterly to connect with a branch of the International, which will connect Durango with Mazatlan. The International is at work on this branch, and it will soon open a rich mining and sugar country. Assurances of the extension of the Central were given when work was actively begun on December 1 at Venta del Astillero. A large amount of material, including rails and ties and heavy rolling stock, is already on hand at Guadalajara.

The backers of the railroad are Canadians, and thus far their countrymen have been favored as far as possible. It is probable, however, that work will soon begin on the Pacific end of the line, in which case material and supplies will be procured from San Francisco and the coast lumber ports. It is expected that the line will be completed to Ameca by June. From that place the road will take the right bank of the Ameca river, and, passing close to the towns of Ahualulco and Etzatlan, will cross the mountains near Amatlan de las Canas, reaching Ahuacatlan. From this point the valley of Tepic will be reached by way of San Pedro Lagunitas Compostella and Hacienda de Mira Valles. Work on the International is also going ahead with rapidity, though its engineers have encountered exceedingly difficult work on account of the barrancas found west of Guadalajara. The country through which these roads will run is rich in minerals, as well as agricultural products, and with attendant enterprises the railroads will have an important bearing on the development of commerce between the western Mexican coast and California.

In touching on the question of canal improvement in his message Governor Morton refers to the vote in favor of issuing bonds of the state, not to exceed $9,000,000, for the improvement of the Erie, the Champlain and the Oswego canals by deepening the Erie and Oswego canals to a depth of not less than nine feet, and the Champlain canal to seven feet of water, and also lengthening and improving the locks and strengthening the walls of the canals. The law thus approved requires the legislature annually to impose a tax of thirteenth-hundredth mills upon each dollar of valuation of real and personal property in the state subject to taxation, the proceeds of which, after paying the interest due upon the bonds, shall be invested by the comptroller, under the direction of the Commissioners of the Canal Fund, and together with the interest arising therefrom shall be devoted to the sinking fund created for this purpose. Four millions of dollars were appropriated by the act, and upon the sale of the bonds will be immediately available. The deepening and enlargement contemplated will, it is suggested, greatly increase the capacity and usefulness of the canals. The greater depth of water and the strengthening of the embankments, walls and locks which will be effected will, it is said, permit a largely increased application of steam power, and thus not only admit vessels of greater draught and cargo capacity, but enable them to be moved with increased speed. It is also pointed out that the recent experiments with electric motors for canal boat propulsion made at the western end of the Erie Canal were so successful in character and results as to lead to the belief that when the system is applied to the entire canal it will increase its traffic capacity by at least 35 per cent.

A writer in *Harper's Weekly* states that Cripple Creek, Col., embraces an area with a radius of not more than three miles. It contains, all told, perhaps eight or ten square miles of ground. This at the outside would yield six or seven hundred full claims. On these there would be a possibility of finding veins rich enough to bear the cost of working. There are in the district, so far, some twelve thousand located claims, from which one may judge of the probable value of the most of them. Of these twelve thousand claims of course the many are merely fractional. About thirteen hundred are patented, and have title established, but only two hundred are shipping ore. "In other words, there are ten thousand odd claims in the district that so far as developed are practically worth nothing at all."

CURRENT BUSINESS NEWS.

Industrial.

A dispatch from Youngstown, Ohio, says that under the Amalgamated Association scale for January and February the puddlers will receive an advance of 25c. per ton, making the boiling scale $4.50, and the finishing mills get an increase of 2 per cent.

The United States Potters' Association, in annual convention in Washington this week, elected C. W. Franzheim, of Wheeling, W. Va,, president, and Albert Day, Steubenville, Ohio, secretary.

The Chattanooga *Tradesman* says: "Less has been heard than usual of the organization of cotton mill companies and the building of new mills."

The decline in the price of southern iron having been discounted, it had little effect, "especially as the labor organizations will not contest the reduction in wages which follows the lowered price. If iron production continues at its present stage the coal miners will be kept in operation as at present, and no change will be made till July next, the beginning of a new year for the labor unions."

Commercial.

The *American Agriculturist* says: "The potato supply on New Year's day may appear excessive because compared with the short crop of 1895, but it makes quite a different showing compared to previous large crops. The total supply is now about what it was in midwinter, after the great crop of 1891, when prices were higher than at present and declined by spring.

	Total	On hand	Farm	—Boston prices—		
Years.	crop, bush.	Dec. 31, bush.	price.	Nov.	Jan.	April.
1895..	282,148,000	141,000,000	33c.	.38	.35	?
1891..	250,000,000	150,000,000	37c.	.50	.50	.45
1889..	218,000,000	100,000,000	40c.	.60	.70	1.00
1883..	268,000,000	135,000,000	42c.	.50	.40	.45

A large territory south of a line run through Pittsburgh, Columbus, Indianapolis and Springfield, Ill., was drouth-stricken, has already had to import hundreds of carloads of potatoes, and will require many more. Stocks of sweet potatoes at the south are below the usual amount at this time, and Irish potatoes are selling well in southern cities and in western mining centers."

A Columbus, Ohio, dispatch says: "The wool growers have had a heated discussion over the matter of asking for custom protection from the present Congress. By a vote of 15 to 5 the following was adopted: A specific duty of 12c. on the two grades of clothing wool, known in the McKinley bill as Nos. 1 and 2, and an increase of 1 per cent. per pound each year until the fine grade known as No. 2 reaches 15c. On the grade of carpet wool known as Nos. 1 and 2 in the McKinley bill, we ask and demand 8c. per pound."

Eight members of the executive committee of the Kentucky and Tennessee Board of Fire Underwriters were put on trial in Chattanooga this week for combination and conspiracy to maintain and advance rates of insurance in Chattanooga in violation of the Tennessee Anti-trust law.

The use of Russian petroleum is increasing in Germany, where it is sold for 1c. per quart less than American oil.

The New York Canal Boat Owners' Association held a meeting at New York city this week to discuss canal matters. "Last season's business was the worst in the history of the canals. The boatmen urge the speedy improvement of the canals, for which the people voted at the last election, but they do not attribute to the inadequate canals the entire blame for the decline in the canal business. They charge the elevators, the warehouses and the corporations controlling terminal facilities in this city and Buffalo with charging extortionate rates."

The annual meeting of the Lake Carriers' Association was held this week in Detroit. J. J. H. Brown, of Buffalo, was elected president, and Henry Keep secretary.

Lumber prices are firm at the list quotations, and but little is heard of cutting prices to effect sales.

A special dispatch to the Philadelphia *Press* says that the dairy and food commissioner has started a very aggressive fight against the dealers in oleomargarine all over the state. To date about $3,000 have been collected from fines paid by "oleo" dealers, and turned into the state treasury by the dairy and food commissioner. Cases which are yet pending will probably raise this sum to $4,000, which will go to the state treasury. In addition to the money paid, $50 in each case where a conviction is secured, a like sum is paid to the county in which the case is brought.

Financial.

The Lake Erie & Western Railroad Company has declared a quarterly dividend of 1¼ per cent. on its preferred stock, payable February 15.

Following will be found the range of prices of securities traded in on the Pittsburgh Stock Exchange during the year 1895, furnished by R. J. Stoney, Jr., Pittsburgh, Pa.

Name of Company.	Dec. 31, 1894.	High, 1895.	Low, 1895.	Dec. 31, 1895.

The Treasury Department has requested the Postmaster-General to ascertain from postmasters what percentage of gold is received by them and where the gold has been deposited. This action is taken to ascertain the location of gold in the United States in connection with the recent bond circular.

The Illinois Central Railroad Company has declared a semi-annual dividend of 2½ per cent., payable March 2.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 74,862 tons, against 94,499 tons the previous week and 42,846 tons the corresponding week of the previous year.

The Union Pacific Railroad system reports gross earnings for November of $2,134,204, an increase of $84,924 as compared with the same month of the previous year, and net $901,791, an increase of $411,567. For the eleven months ending November 30 the gross earnings were $20,477,600, a decrease of $984,622 as compared with the corresponding period of the previous year, and net $7,630,353, an increase of $1,637,257.

The Baltimore & Ohio Railroad reports gross earnings for December of $2,037,256, an increase of $162,380 as compared with the same month of the previous year, and net $628,828, an increase of $57,004. For the six months ending December 31 the gross earnings were $12,709,233, an increase of $629,557 as compared with the corresponding period of the previous year, and net $4,116,220, an increase of $90,287.

The Denver & Rio Grande Railroad for the six months ending December 31 reports gross earnings of $4,067,065, an increase of $359,526 as compared with the corresponding period of the previous year, and net $1,816,171, an increase of $213,024. Fixed charges were $1,179,242, leaving a surplus of $636,929, an increase of $240,771.

Legislative.

The Arizona Territory Admission bill has been taken up for consideration by the House Committee on Territories, and Delegate Murphy has presented in detail reasons why the territory should be admitted to statehood.

A bill prohibiting pool selling has been reported favorably to the Lower House of the Virginia legislature.

In a hearing before a joint committee of the Senate and House to inquire into his failure to purchase seeds for distribution through the agency of members of Congress, Secretary Morton said that he was forbidden under an act passed by the last Congress to go into the open market and buy the seeds; that he "had invited bids under the terms of the statute and received no offers such as complied with that law."

Mr. Dalzell, Republican, of Pennsylvania, introduced a bill in the House January 13, incorporating the Lake Erie and Ohio River Ship Canal Company, with power to connect Lake Erie and the Ohio river by canal. The proposed waterway is to begin at a point near Pittsburg and end near Warren, Ohio. The bill names Andrew Carnegie and some twenty others as incorporators.

Miscellaneous.

The Chief of the Bureau of Statistics, Treasury Department, reports that the total immigration from the United States during December and the twelve months ending with December 31, compared with similar periods in 1894, was as follows:

	—Number—	
DECEMBER.	1895.	1894.
Males	11,032	8,306
Females	7,132	6,471
Totals	18,164	14,777
TWELVE MONTHS ENDING DECEMBER.		
Males	186,252	141,057
Females	138,290	107,926
Totals	324,542	248,983

The annual meeting of the National Board of Indian Commissioners, and of missionaries and others interested in the welfare of the Indian, was concluded in Washington this week. Merrill E. Gates was reëlected president, and General Eli Pallet Whittlesey, secretary. Among the resolutions adopted was one requesting the President to make further extension of the civil service so as to embrace all governmental officers connected with the Indians.

The Southern Irrigation Congress has been in session in Atlanta, Ga., this week.

The members of the United States Board of Supervising Inspectors of Steam Vessels have met at Washington for their forty-fourth annual conference. A large number of questions will be discussed at the meeting.

At the forty-third annual meeting of the American Society of Civil Engineers, in New York city, this week, the following officers were elected: President, Thomas Curtis Clarke, of New York; vice-presidents, William Rich Hutton, New York, and Peter Alexander Peterson, Montreal, Canada; treasurer, John Thomson, New York.

Foreign.

In a report on "German Fears of American Competition in the World's Market," William D. Warner, United States consul at Cologne, "tells of the alarm expressed by the German people over the decline of their foreign trade, and particularly over the manner in which the United States is looming up as Germany's principal competitor."

In July, 1895, the London Chamber of Commerce drew the attention of the Australasian chambers of commerce to the great depreciation in the value of hides caused by the present system of branding cattle in the colonies. Hides from the River Plate were commercially more valuable, owing in a great degree to the better system of branding there. The Queensland government intend to introduce a measure permitting owners to brand on portions of the hide of least value to the tanner.

An English iron trade journal says: "Three at least of the leading Belgian steel companies have now established branch works in Russia, and one of these Belgian works has been largely responsible for the construction of the large new steel works built by the Viceroy at Hankow. Germans, French and Belgians are now struggling hard for supremacy in Chinese and Japanese markets, with syndicates, concessions, trade journals, special commissions, consular assistance and other muniments of industrial effort."

Pulaski F. Hyatt, United States consul at Santiago de Cuba, has reported to the State Department that at the request of the Spanish government the Cuba Submarine Telegraph Company (English), now having cable direct between Santiago and Cienfuegos, thence overland to Havana, has laid a new cable between Santiago and Cienfuegos, "which touches Manzanillo, Tunis, Jucaro, Santa Cruz and Casilda."

Mr. Schuster, the new governor of the Union Bank of London, at the half-yearly meeting on Wednesday, said that the prevailing impression that the large increase in the stock of gold in London was due to increased production was only partially true. It was from the United States chiefly, he added, that the increase was obtained. The imports from the United States, continued Mr. Schuster, were due to the currency troubles and the want of confidence arising therefrom. But, in his opinion, the troubles would not continue much longer, and when these difficulties were overcome, as he could not but hope they would be sooner or later, the tide might turn the current in the opposite direction, and it might set in with great rapidity and force.

A London dispatch says that "Professor James Bryce, who has just returned from a trip to South Africa, in addressing the Edinburgh Chamber of Commerce recently said there was no doubt that Mashonaland and Matabeleland would prove to be wealthy, but railways were necessary to develop them. A large trade, he said, was developing in the region of Delagoa bay, but he regretted to see that it was passing from British to German hands. He estimated that the Transvaal's gold mines would produce £700,000,000 ($3,500,000,000) worth of gold. Should this estimate prove correct, the ratio between gold and silver might need altering."

The United States consul-general at Berlin writes that he has secured a room on the east side of the building to be devoted to the International Art Exhibition to be held in Berlin from May to October, 1896, for the use of American artists, and also a second room, conditional on the action of the American artists residing in Paris. Count Harrach, president of the exhibition committee, has promised Mr. De Kay that in the event of American artists deciding to send their works to Berlin they shall have the same privileges as artists in London or Paris, namely, their works shall be selected by a committee in New York, appointed from home artists and art lovers, and shall be brought to Berlin and returned to New York free of charge.

The Russian budget of 1896 "estimates the ordinary revenue for the fiscal year at 1,239,400,000 roubles and the ordinary expenditures at 1,331,000,000 roubles. The extraordinary revenue is estimated at 2,200,000 and the extraordinary expenditures at 130,000,000 roubles. Of the extraordinary expenditures the sum of 119,000,000 roubles is covered by funds in the imperial exchequer, which on January 1 amounted to 271,000,000 roubles."

Austria-Hungary can no longer be counted on as a market for American petroleum, according to United States Consul Murphy at Luxemburg, who furnishes to the State Department a report upon the recently developed oil fields of that country.

A London journal says: "Brazilian coffee growers, who have lately been threatened with a powerful rival in Mexico, will be glad to learn that Mr. J. L. Pernet, of Orizaba, a well-known authority on coffee, estimates Mexico's crop this year at only 300,000 centals, or fully 50,000 centals less than last year. The shortage is said to be due to the severity of last winter."

The Brazilian government has concluded a contract for the immigration of 100,000 foreigners, but "Italians are excluded from the provisions of the contract."

Railway construction in Japan, temporarily interrupted during the war, is again active. "A sum of $22,000,000 has been voted for the construction of a double line, 376 miles long, between Tokio and Kobe, passing through the principal commercial and industrial centers of Japan, viz., Yokohama, Kioto and Osaka."

The Glasgow *Herald* says: "The disturbance in the Transvaal has had a serious effect upon business among manufacturers in the South Staffordshire hardware towns centering round Wolverhampton. Yesterday telegrams were received by the manufacturers engaged in the cultivating and edge tool, mining appliances, and galvanized iron and galvanized netting trades countermanding orders for Johannesburg, Pretoria, Krugersdorp and other parts of the Transvaal."

News has been received from Caracas, Venezuela, that residents of that city "are boycotting English concerns there and also in La Guayra, Valencia and other Venezuelan cities."

The Canadian Cabinet ministers who resigned recently were sworn into office again on Wednesday. Sir Charles Tupper takes the portfolio of Secretary of State.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

City Ordinance—Slaughter Houses.

The Supreme Court of Indiana held, in the recent case of Beiling vs. City of Evansville, that the courts cannot pronounce a city ordinance unreasonable which is expressly authorized by statute and is not in conflict with the state constitution; that the city of Evansville has power, by ordinance, to prohibit the location of slaughter houses within its limits, and that the prohibition of slaughter houses near the residences of its citizens comes within the police power of the state.

Railroad—Passenger—Negligence.

The Kentucky Court of Appeals held, in the recent case of Louisville & Nashville Railroad Company vs. Depp, that the announcement of a station by the conductor of a railroad train does not imply that the train has already reached the station, and that, notwithstanding such an announcement, it is negligence per se for a passenger to attempt to leave the train while it is in motion and before it has reached the station, and for injuries received by him in doing so he cannot recover of the company.

Principal and Agent—Ratification.

The Supreme Court of Louisiana held, in the recent case of Cockerham et al. vs. Pent, that a contract, to be obligatory upon a principal when made by an agent, must be made in the name of a principal; that if the agent's contract is in his own name the contract is the contract of an attorney, and not of the principal; that if the principal undertakes to make the act his own, the ratification should be timely and established beyond question as against the other contracting party, and that a party to a contract, by delaying to pay the price, and finally by acquiescing in the release of the vendor, is precluded at a date subsequent from claiming the property.

Wife—Mortgage—Husband's Debt.

The Supreme Court of Indiana held, in the recent case of Milburn vs. Milburn et al., that a woman who joins with her husband in executing a mortgage upon a part of his land to secure the husband's debt, at the same time taking a mortgage upon other land to secure herself against the loss of her inchoate interest in the land mortgaged, does not lose her rights under such indemnifying mortgage by joining in a quitclaim deed conveying the first-named land to the mortgagee, if such deed is executed only to prevent proceedings to foreclose the mortgage, after her husband has become wholly insolvent, and has suffered a default which leaves no possible defense to such foreclosure proceedings.

Insurance—Reimbursements.

The Supreme Court of Louisiana held, in the recent case of Home Insurance Company vs. Board of Assessors, that losses of an insurance company are necessary incidents of its business; are constantly occurring, and are provided against in the risk undertaken; and premiums are collected for the purpose of reimbursement; that the reimbursement of reinsurances which are involved in pending litigation between the insurance company and its correspondents and customers does not constitute a proper object of reduction in an assessment; that an overestimate, made of unearned premiums collected and returned to its policy holders on account of cancellation of policies, is not a proper object of reduction, and that it is natural and to be expected that such estimates will fluctuate, and hence an assessment which is predicated upon an estimate cannot be absolutely certain.

Building Association—Mortgage.

In the case of Maudlin vs. American Savings and Loan Association, recently decided by the Supreme Court of Minnesota, it appeared that the defendant, a "national building and loan association," doing business under the general laws of 1889, chapter 236, "advanced" or loaned to defendant $6,000, as the matured value of her stock, less $6,000 "premium" bid by her for the loan. It was assumed that the stock would mature in nine years. The defendant took from her a mortgage to secure the payment of the interest on the $6,000 advanced and the payment of the monthly dues on the stock for the nine years. The mortgage contained a stipulation that a default in the payment of an installment of interest or stock dues for six months should render the stock dues for the whole nine years immediately due and payable, and that the same might be enforced and recovered at once as stipulated damages, together with all interest and fines then due, and all costs and disbursements. Default having been made in the conditions of the mortgage the defendant foreclosed, treating the stock dues for the whole nine years as presently due. The court held that the amount due on the mortgage for stock dues was only their present worth in gross, and that the stipulation that the gross amount of the stock dues, without any rebate or discount for the time they had to run, might be recovered as "liquidated damages" was non-enforcible, because the case was simply one of the breach of a contract for the payment of money where the measure of damage was susceptible of definite measurement.

Contract—Limitation—Public Policy.

The Kentucky Court of Appeals held, in the recent case of Wright vs. Gardner, that a contract in reference to a matter of public concern whereby the parties agree in advance to extend the period of limitation fixed by the statute is void as against public policy; that a contract between buyers and sellers of tobacco in the public market, agreeing in advance to extend the time within which a claim for reclamation may be made beyond that fixed by section 4805, Kentucky statutes, was void, and that where a contract was made between the buyers and the inspector, whereby the inspector agreed to make good any loss to them by reason of a difference between samples drawn by him and the tobacco sold, the sellers agreeing to save the inspector harmless, the inspector having made good such a loss upon demand made after the expiration of the time fixed by the statute, he could not recover of the sellers, although the claim for reclamation was made within the time allowed by the contract.

Lease—Construction—Evidence.

The Supreme Court of Georgia held, in the recent case of Carmichael vs. Brown, that a lease of all the "pine timber" on a given area of land, "for the purpose of manufacturing spirits of turpentine," etc., "for the full term of three years from the time boxes are cut," does not necessarily mean that the term of the lease will expire at the end of three years from the date the first trees are boxed; that the words "from the time boxes are cut," as used in such a lease, are ambiguous, and cannot be correctly construed by a court without the aid of extraneous evidence to explain their real meaning as understood by the parties, and that where the plaintiff asserted that the lease had expired, the burden of establishing this assertion rested upon him, and where he failed to do so by introducing other evidence to show what the contract embodied in the lease really meant as to the time from which the three years should be computed, the trial court, without the aid of such evidence, being unwarranted in holding absolutely that the lease expired at the expiration of three years from the date of the first boxing, erred in granting an injunction.

Claims—Executive Departments.

An important decision in reference to claims before the national executive departments has been rendered by the Supreme Court of the United States in a suit brought by the state of New York against the government for interest on money raised and expended by the state for troops raised and equipped during the war. The court holds that any claim made against an executive department involving disputed facts or controverted law where the amount in controversy exceeds $3,000, or where the decision will affect a class of cases or furnish a precedent for the future action of any executive department in the adjustment of a class of cases without regard to the amount involved in the particular cases, or where any authority, right, privilege or exemption is claimed or denied under the Constitution of the United States, may be transmitted to the court of claims by the head of such department under section 1063 of the Revised Statutes for final adjudication; provided such claim be one of which, by reason of its subject matter and character, that court could take judicial cognizance at the voluntary suit of the claimant; that any such claim, without regard to its amount, may be transmitted under the Bowman act to the court of claims by the head of the executive department in which it is pending, not for final judgment thereon, but for a report to such department of facts and conclusions of law for its guidance and action; that any such claim may, in the discretion of the executive department in which it is pending, and with the consent of the plaintiff, be transmitted without regard to its amount, by the head of such department, to the court of claims, under the Tucker act, for a report of facts and conclusions of law, and that in every case coming before the court of claims from an executive department, under the Bowman act, of which that court could take judicial cognizance at the voluntary suit of the claimant, a final judgment may, in virtue of the thirteenth section of the Tucker act, be rendered, and in addition a report of its proceedings be made to the department by which the claim was referred to said court.

BUSINESS NOTES.

Retire the Greenbacks.

The Chicago Board of Trade, at its annual meeting on Monday, adopted a resolution calling upon Congress "to at once enact such legislation as may be necessary to permanently retire and cancel all United States notes, called greenbacks, and Treasury notes, called Sherman notes, in order to prevent disaster to business and to preserve the honor of our country."

Imports of British Tinplate.

The *American Manufacturer* says: "The total exports of tinplate from Great Britain to the United States during the past five years are shown in the following:

Tons, 2,240 lbs.	1895.	1894.	1893.	1892.	1891.
January	18,626	18,296	23,498	17,554	32,018
February	23,201	13,413	20,190	22,268	28,253
March	18,743	16,907	31,334	22,789	38,638
April	15,946	13,210	31,651	31,061	45,208
May	18,118	21,291	26,988	23,799	55,569
June	13,760	17,247	26,759	23,550	63,539
July	16,445	17,805	22,248	24,750	4,323

December	21,033	24,677	14,931	23,417	13,536
Totals	222,901	226,879	255,583	276,479	325,145

Canadian Cattle and Pleuro-Pneumonia.

An Ottawa dispatch says that the Acting Minister of Agriculture has sent a report to the British authorities "showing conclusively that Canadian cattle are free from pleuro-pneumonia. One proof of the immunity of the cattle from this dread disease is the fact that veterinary experts examined during last year 100,000 cattle at Montreal and rejected only 140, all because of lameness or other troubles contracted in transit; not one for contagious disease. The report also pointed out that in 200,000 Canadian cattle slaughtered at British ports not one case of old or encysted pleuro-pneumonia had been found. On these and other grounds the British government is urged to remove the embargo, or at least to afford facilities for a satisfactory scientific test of suspected cases."

Value of the Silver Dollar in 1895.

The Philadelphia *Record* says that "the price of silver during the past year has shown great steadiness, notwithstanding the fluctuations incident to speculations based upon the probable effect upon prices of the war between Japan and China. The lowest price per ounce in the London market was 27 3/16d., equivalent to $0.59824 in United States money. The highest price was 30 7/8d., equivalent to $0.68077. The average for the year was 29.01d., equal to $0.63798. The bullion price of our silver dollars, based on these quotations, ranged during the year from $0.46270 to $0.52653—an average of $0.49168. From this it is apparent that to call our Bland dollars 'fifty-cent dollars' is to speak with sufficient accuracy. There is nearly 50c. worth of silver in them the greater part of the time."

Electric Welding.

London *Engineering* says: "One of the latest developments in electric welding is an adoption of the well-known phenomenon that the electric arc is deflected when a magnet is brought near it. On placing a powerful electric magnet beside the arc the latter is driven outward, and a tongue of flame is formed which resembles an ordinary blow-pipe flame, only of much greater intensity. The system is known as the Zerener system, and the electric furnace consists of two carbons, which form the arc, and which can be fed by hand or automatically, and a horseshoe electro-magnet, which can be adjusted in any position. The fact that the arc may be deflected in any required direction enables welding and brazing to be carried out in positions which would be practically impossible in ordinary welding furnaces."

To Study of the Great Canals.

An evidence that the report of the Nicaragua Canal Commission, now in the hands of President Cleveland, does not conclusively find the proposed interoceanic American waterway infeasible, or its construction by the United States impossible, is shown, says the Philadelphia *Ledger*, "in the fact that Major William Ludlow, chairman of the commission, is about to leave London, where he is the military attaché of the American embassy, on a tour of ship-canal inspection to familiarize himself with the great artificial waterways, the physical difficulties which have been surmounted in constructing them, and the economic changes that they have wrought in marine transportation. After studying the Suez waterway, in Egypt, Major Ludlow is to visit the Corinth canal, in Greece; the famous Kiel cut, in Germany; the North Holland and Amsterdam artificial ports, and, after returning to England, the Manchester ship canal and the Caledonian system of interior navigation. In addition to an examination of the engineering features of these works and their adaptation to the problems to be solved in constructing a canal across the American isthmus, Major Ludlow is expected to secure new data upon the likelihood of either the Nicaragua or Panama canals becoming paying investments."

British View of Wool Conditions.

The London *Daily Financial News* says: "Messrs. Charles Balme & Co.'s annual circular on the wool trade is of additional interest this year, as it shows unmistakably the influence which the free-wool tariff in the United States had upon our colonies. The American purchases of colonial wool last year amounted to 200,000 bales, as against 48,000 bales in 1894 and 73,000 bales in 1893, thus accounting for over 75 per cent. of the total increase of 202,000 bales in last year's purchases. The following table shows the total purchases for the English, continental and United States markets, including the direct shipments from the colonies to each and the quantities forwarded via London, during the past two years:

	Bales.	
	1894.	1895.
English purchases	829,000	866,000
Continental purchases	1,234,000	1,247,000
United States purchases	48,000	200,000
Totals	2,111,000	2,313,000
Stock in London carried forward to 1896.	63,000	20,000
Totals	2,174,000	2,333,000

It may be added that Australasia exported to London last year 1,546,600 bales and South Africa 244,000 bales."

Production of Manganese Ores in 1894.

Mr. Joseph D. Weeks reports that "the production of manganese ores proper in the United States in 1894 shows a reduction from the previous year, the product being 6,308 tons in 1894, as compared with 7,718 tons in 1893. The production of 1894 is the smallest of any year since 1884. The production of Arkansas in 1894 was about the same as in 1893. California shows a reduction of 122 tons, Virginia a reduction of about 2,300 tons, while Georgia shows an increase of 553 tons, Tennessee an increase of 440 tons, and West Virginia, which does not appear at all in previous years, shows a production of 100 tons. The total value of the 6,308 tons produced in 1894 was $53,635, or $8.50 a ton, as compared with a total value in 1893 of $66,614, and an average value of $8.63. The amount and value of the manganese ore produced in the United States in 1893 and in 1894 is shown in the following table:

	1893.			1894.		
States.	*Product, long tons.*	*Total value.*	*Value per ton.*	*Product, long tons.*	*Total value.*	*Value per ton.*
Arkansas	2,020	$24,240	$12.00	1,934	$19,564	$10.13
California	400	2,000	5.00	278	1,800	6.47
Georgia	724	5,068	7.00	1,277	8,620	6.74
Tennessee	482	4,504	9.34	922	6,993	6.50
Virginia	4,092	30,802	7.53	1,797	16,658	9.27
W. Virginia	....	....	....	100	1,000	10.00
Totals	7,718	66,614	*8.63	6,308	53,635	*8.50

* Average.

A comparison of this table with that of previous years shows the uncertainty accompanying the production of manganese ores."

An International Bank.

A Washington dispatch says the House Committee on Banking and Currency on Monday considered the project for an international American bank, "which was one of the recommendations of the Pan-American Congress and was largely the idea of the late James G. Blaine. Among the would-be incorporators are Cornelius Bliss and Charles R. Flint, of New York; T. Jefferson Coolidge, Andrew Carnegie, J. S. Clarkson, P. D. Armour and M. M. Estee. The bill puts the capital stock at $5,000,000 and authorizes the bank to act as the financial agent of any government, state or municipality, or corporation, to handle bonds, etc., but bars it from issuing notes to circulate as money in the United States. Comptroller Eckels addressed the committee, stating that he favored the establishment of such a bank under proper restrictions. It would give to the United States, he said, cheaper exchange with South American republics and enable them to compete successfully with European merchants and manufacturers. All South American exchange is now handled through London and other European centers, and a small saving in exchange often determined who should do the business of a country. The international bank, he thought, should not be permitted to issue circulation in the United States, and it should be under such restrictions that it would not be given an advantage over other banks under government control in case it should decide to do all its business in the United States. The question whether such a bank could be chartered under the Constitution was one for Congress to pass upon. Commodore William T. T. Hughes, of New York; S. C. Neill and Charles J. Bell explained the details of the plan."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

While general trade has not shown a widespread tendency to revive from the holiday depression, there are favorable features in a revival in iron and steel prices and continued heavy cereal exports.

Except at Baltimore, New Orleans, Buffalo, and in certain lines at Chicago, St. Louis, St. Paul and Minneapolis, jobbers in staple lines report business slow. Travelers are on the road, but returns are irregular, in only a few instances indicating the usual volume of orders for spring delivery. Relatively greatest improvement is shown in the request for dry goods, clothing, hats and shoes. Prints and ginghams are only fairly active, with the mills at work in spite of the reduced demand. In Rhode Island, woolen goods manufacturers in some instances are keeping their machinery employed at a loss rather than have it idle. Cotton goods makers report having shaded prices of some goods on hand, but hold quotations firm on orders for future delivery, the advance in raw cotton still being above a parity with that of products. Raw wool is stronger, although the volume of business is small, bidding at the London sales having put the price of choice fleeces up 5 per cent. While hides are nominally firm at unchanged prices, offerings of leather have been freer and quotations have weakened, circumstances which have shown themselves in the wholesale price for shoes. Shipments of shoes from six New England manufacturing centers last week amounted to only 80,000 cases, against 96,000 cases in the like week last year.

The feature of the week is the advance in iron and steel and the revival of encouragement at the outlook. Bessemer pig and billets are up from 65c. to 75c. per ton at Pittsburgh and $1.25 at Chicago, with the outlook for a further advance. Interests controlling the production of coke and of Lake Superior iron ore having determined that prices of those products shall not react to the level of 1894-5, producers of Bessemer pig and billets, in the face of the restricted output of furnace and mill since the first of the year, together with the improved demand within the week, find themselves able to advance prices. Other advances include those for tobacco, due to occurrences in Cuba, wheat, based on continued free exports, and pork and lard, on the advance in cattle and hogs. Prices of such staples as wheat flour, sugar, coffee, coal, lumber, hides and print cloths are practically unchanged, while those for leather and shoes, as explained, are lower, as is the price of cotton, petroleum, Indian corn, oats, copper and lead, the last two based on competition between producers.

Business failures in the United States for the week number 412, as compared with 446 for the previous week, 378 for the week last year, 404, 290 and 405 for corresponding periods in 1894, 1893 and 1892.

Exports of wheat (flour included as wheat) from both coasts of the United States amount to 3,202,000 bushels this week, as compared with 3,471,000 bushels last week, 3,564,000 bushels in the week a year ago, 3,332,000 bushels in the week two years ago, and 3,637,000 bushels in third week of January, 1893.

Bank clearings totals begin to record the decline in the volume of general trade which has made itself apparent now for more than a month. Clearings throughout the United States this week are $1,060,000,000, nearly 14 per cent. less than last week, and 8.5 per cent. less than in the third week of January, 1895, but 15 per cent. more than in the corresponding week of 1894, and 27 per cent. less than in the like week of 1893, a period in which the volume of business was very heavy. As compared with the third week of January, 1892, bank clearings this week are 17 per cent. smaller.

Chicago banks report that a great deal of money is tied up in Iowa in Indian corn; that merchants in that state are therefore not selling as many goods as expected, and that country collections are correspondingly slow. Kansas City advices are that in southern Kansas a great deal of Indian corn is being fed to live stock. Tacoma telegraphs that large quantities of cotton and cotton goods are arriving on the way to the Orient, and that orders have been received from England for cedar doors. There have been several days' rain in California, and the prospect for continuance causes rejoicing.

Stock speculation at New York is lifeless. The fear of tight money resulting from preparations for and payments on the bond issue, with the possibility of other contingencies before February 5, imposes caution, and keeps both the public and the large operators out of the market. London bought early in the week, and encouraged covering by bears and little buying by traders. This, however, exhausted itself, and though pressure to sell is absent, the market is heavy. Secretary Carlisle's modification of the terms of payment for the new bonds is favorably considered, but has no practical influence at present. Money is easy at 4@5 per cent. on call, but time loans are scarce and 6 per cent. bid. Premiums of ⅛@⅞ per cent. have been quoted for free gold and legal tenders. The demand from intending bond bidders has decreased somewhat. Gold shipments for the week are $2,700,000, but $5,450,000 gold also came from Europe, this anomaly being explained by the premium mentioned above. Demand sterling is 4.89@4.89¼, which figures justify gold shipments. The exchange market is, however, unsettled and waiting.

Advices from Montreal are that trade is greatly restricted in the province of Quebec, largely owing to the lack of snow. The Canadian lumber market, it is reported, is likely to be in an awkward position next spring should present conditions continue to govern. At Quebec city general trade is quiet, even dull. No improvement is looked for in demand for staple goods at Toronto prior to February, yet tributary country trade is better than a week ago. Halifax merchants report more seasonable weather, improved country roads, and a better outlook for dealers of produce and lumber. Mild weather has hurt the Newfoundland frozen herring fishery trade. Clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $21,053,000 this week, compared with $27,050,000 last week, and as contrasted with $21,158,000 in the like week last year. A similar comparison with 1894 shows an increase this week of about one-third, but as compared with the corresponding week in 1893 this week's clearings show a falling off of less than 5 per cent. The total number of business failures in the Dominion of Canada, as reported to BRADSTREET'S this week, is unusually large, aggregating 74, against 53 last week, 64 for the week one year ago, and 48 and 39 for similar periods two and three years ago.

FINANCIAL.

The Money Market.

The New York loan market is still very sensitive, and is governed, to a large extent, by the belief that the coming bond issue will create contraction and, possibly, severe stringency. The circular issued by the Treasury on Thursday modifying the terms of payment and extending them by installments over four months had a reassuring effect, and it was even thought that further modifications might be made. The supply of money on call has been ample, and rates on the Stock Exchange this week have not been higher than 6 per cent., the bulk of the transactions being at 4@5 per cent., with recorded quotations as low as 2@3 per cent. There is, however, much difficulty in obtaining time money. The demand has increased, but offers of 6 per cent. for all dates, short and long, find but little of such funds available. Six per cent. is also the only rate named for the best class of mercantile paper, business being very quiet in that department. Interest has attached to the premiums paid for legal tenders and for gold not taken from the Treasury. In regard to the latter large transactions are reported, and the premium demand was at one time as high as ⅞ per cent. Later it fell to ½ per cent. The premium for legal tenders was also ½ per cent. and upwards, large amounts being taken on that basis. Transactions, however, were on a reduced scale at the end of the week.

The New York Banks.

The statement of averages issued by the Clearing House last Saturday throws some light upon the current condition of the money market. It certainly seems to indicate that preparations for the bond issue are resulting in increased reserve holdings, both legal tenders and specie, with a corresponding reduction in the volume of loans. The last item decreases for the week over $7,000,000, while there were gains of $2,391,000 in specie and of nearly $5,000,000 in legal tenders, making a total increase in reserve holdings of over $7,300,000. The deposits decreased only $364,000. The result of the other changes was an increase of $7,400,000 in surplus reserve, the figures of the statement comparing as follows with those of the preceding week:

	Jan. 4.	Jan. 11.	Changes.	
Loans	$465,580,700	$458,208,400	Dec.	$7,372,300
Specie	68,954,700	71,346,200	Inc.	2,391,500
Legal tenders	73,728,700	78,654,100	Inc.	4,925,400
Deposits	491,614,900	491,258,800	Dec.	364,100
Circulation	13,952,900	14,002,600	Inc.	49,700
Total reserve	142,683,400	150,000,300	Inc.	7,316,900
Reserve required	122,903,725	122,817,200	Dec.	86,525
Surplus reserve	19,779,675	27,183,100	Inc.	7,403,425

At the corresponding period last year the surplus reserve was $41,792,200, against $92,583,675 in 1894.

The Boston Banks.

	Jan. 13, '96.	Jan. 6, '96.	Changes.	
Loans	$166,865,000	$168,110,000	Dec.	$1,245,000
Circulation	8,945,000	8,893,000	Inc.	52,000
Deposits	104,185,000	108,909,000	Dec.	4,724,000
Due from reserve agts	16,840,000	16,864,000	Dec.	24,000
Legal tenders	5,794,000	5,330,000	Inc.	464,000
Specie	11,329,000	11,116,000	Inc.	213,000

Silver.

The market for silver has been firm and slightly higher this week. It is reported that a demand has sprung up for India, supplies in that country having been reduced by Japanese purchases. The

London price for bars advanced from 30 9/16d. per ounce to 30 7/8d., reacting to 30¾d., and the New York quotation rose from 67c. to 67½c., receding to 67⅜c.

SILVER PRICES.

	Jan. 11.	*Jan.* 13.	*Jan.* 14.	*Jan.* 15.	*Jan.* 16.	*Jan.* 17.
London	30 9-16d.	30 9-16d.	30⅜d.	30⅞d.	30¾d.	30¾d.
New York	67c.	67c.	67¼c.	67½c.	66⅜c.	67⅜c.

Foreign Exchange.

At the present time the condition of the foreign exchange market is a complicated one. The demand for remittances from mercantile sources is fair, and the supply of bills against exports small. The whole situation is, however, affected by preparations for the forthcoming bond issue, to say nothing of the conservative sentiments which reign in foreign financial circles in relation to this country. Credits are restricted, and while there is no disposition to sell out American securities, such as existed a short time ago, the buying of our stocks has been on too small a scale to have any effect. It is understood that balances are still being called in, while certain bankers are also thought to have covered sales of bills which were made some little time ago at higher figures. Higher rates for money and preparations for the bond issue tend to restrict the operations of the market, and a further novel element is introduced in the shape of purchases of bills by parties who desire to obtain gold from Europe with which to buy the new bonds. To this last fact is due the novel circumstance of gold being shipped each way, and apparently with a profit in each instance. This is possible because of the premium of ½ to ¾ per cent. paid here for gold not taken from the Treasury. It is, however, reported, and is perfectly plausible, that some of the gold which came in consisted of shipments made from here and returned without as much as a disturbance of the original packages. It has even been suggested that under the circumstances a system of clearings could be adopted to obviate the actual transfer of coin or bars.

Posted rates have remained steady at 4.88 @4.89½. Actual business for demand sterling varied little from 4.89, or a commission higher. At this figure shipments of gold would be possible, though the fact that a premium has been paid for legal tenders has imposed a check on such transactions. The actual shipments consisted of $1,400,000, taken on Tuesday for export to Europe, and $300,000 for South America. Considerable uncertainty existed as to the shipment on Saturday, which, it seems, will amount to $1,000,000, a total of $2,700,000 for the week, or $6,375,000 since January 1. The gold received from Europe, including arrivals on last Saturday, was $4,500,000.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.89½ @4.89¾; commercial bills, 4.86¾ @4.87; francs, 5.17½ @ 5.15⅝; reichsmarks, 95 1/16 @95⅝.

The Bank of England discount rate remains at 2 per cent. The bank gained £520,000 in specie this week. Its reserve is 60.90 per cent. of liabilities, against 60.44 per cent. last week. In the London open market call money is ¼@½ per cent. and discount 1¼ @1½ per cent. The London stock markets have advanced on the absence of unfavorable political developments.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending January 10, 1896:

	1896.	1895.
Dry goods	$3,183,076	$3,952,537
General merchandise	7,754,890	5,698,104
Total for the week	$10,937,966	$5,650,641
Previously reported	10,898,129	9,495,535
Since January 1	$21,836,095	$19,146,176

The exports (exclusive of specie) from New York to foreign ports for the week ending January 14 were $2,310,914 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$9,538,642	$7,616,723
Previously reported	7,227,728	7,346,560
Since January 1	$16,766,370	$14,963,283

Imports and exports of the United States for the month and twelve months ending December, 1894 and 1895 (preliminary figures for 1895, corrected to January 15, 1896):

December. MERCHANDISE.	1894.	1895.

* Gold and silver.

THE STOCK MARKETS.

The New York Stock Market.

Waiting and narrow conditions have prevailed in the stock market all this week. The assurance that the government bond issue will be fully subscribed does not prevent the existence of a feeling of suspense pending the closing of the bids on February 5. Even with the modifications embodied in Secretary Carlisle's circular of last Thursday, which extends the payment after the first 20 per cent. in allotment over a period of three months, there is thought to be reasonable danger of disturbance in the money market. The dissolution of the Morgan bond syndicate, announced on Wednesday last, was no doubt inevitable, as no reason could be found for its continued existence. It would seem, however, that this action renders the preparations to bid for the bonds and to pay for them after allotment more scattered, and, therefore, more likely to produce an effect on rates for money, to say nothing of the probably increased withdrawals of gold from the Treasury which would result. Efforts to obtain gold for bond subscription purposes continue, and a premium of ½ to ¾, or a little higher, has been paid for supplies, the same rates being also quoted for legal tenders. Large transactions on this basis occurred early in the week, both in specie and legal, though the immediate demand has slackened and the premium has fallen off correspondingly. Withdrawals of gold from the Treasury this week were $4,400,000, of which $2,750,000 were for export, scattered deposits of specie in exchange for legal tenders making the Treasury gold reserve at the close of the week $53,994,000. So far as time loans are concerned, the money market has been easier at 4@5 per cent., but there is unwillingness to put out money on time at this juncture, and the demand for ninety and sixty day collateral loans at full 6 per cent. does not meet with any supply. Foreign exchange rates are firm at 4.89, and a commission in addition has been paid, at which figure gold shipments are possible when legal tenders can be obtained. The anomalous spectacle, however, has been presented of gold both arriving from and being shipped to Europe at the same time, the former movement being an artificial one, profitable only on account of the premium referred to above. If the statement is true that the specie received here was simply a return of amounts that had been shipped from this country, and that in some cases the original boxes were not even opened, it is evident that the process simply increases the drain on the Treasury reserves. Under these circumstances it is easy to understand both the continued absence of public support and the hesitation of large speculative interests to move the market. The absence of selling pressure and the improvement of prices for "Americans" in London caused covering of shorts and some buying by the smaller traders during the early part of the week. London's purchases were, however, on a limited scale, and represented the closing of professional bear accounts in that market, and at the close of the week the tendency abroad in regard to our stocks was less favorable. This, with the uncertainty in regard to the money market, resulted in irregular concessions in prices and in a more decided tendency to decline on Friday, when the market, however, was extremely dull.

Features of real importance and interest have been singularly wanting. Sugar was the only stock in which there has been manipulative activity amounting to anything. Its price was put up to 104¼, apparently by inside interests, but fell to 101½ on reports that the Senate would insert a 15 per cent. increase on raw sugar in the tariff bill. Leather preferred fell to 57¼ on the failure of the directors of the company to act on the dividend, but recovered to 64¼ on reports that a dividend might be declared next month. The other industrials were strong and dull in the early part of the week, and dull and heavy later on.

The railroad share list was generally neglected. St. Paul and Louisville owed their strength largely to London purchases. St. Paul advanced from 67¼ to 69⅝, and London was estimated to have bought nearly 10,000, but sold as much on Thursday and Friday, the price receding to 68. The success of the Reading plan is assured, some 90 per cent. of the stock and junior bonds having been deposited, Opposition from small minority stockholders is threatened. This, however, produces no effect, and a renewal of efforts to harmonize anthracite interests is talked of. Manhattan and Western Union have been stronger on covering of the outstanding short interest in those stocks.

Boston Stock Market.

[Special to BRADSTREET'S.]

The tone of trade has been slow, but a little more strength to values is shown at the close. Atchison closes 1 point higher, but transactions have been small, while Mexican Central shows an advance of ¾ point, with moderate sales. Calumet & Hecla closes unchanged, with Tamarack 5 points lower. Land stock continues quiet and featureless. Bell Telephone is steady and unchanged in price.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending

General Mention.

The New York Life Insurance Company has just published its fifty-first annual statement, an outline of which is given in another column. The totals are surprisingly large, and they represent "completed transactions only." The new insurance—which exceeded $127,000,000—includes only new policies upon which the first premium was received in cash between January 1 and December 31. All policies written and returned as not taken are omitted, as is also a large part of the November and December issues, which have not yet been reported on. As a further result, no "unreported premiums" are included in assets and surplus. During President McCall's first year in office it is explained that "he suggested a change in the insurance department blank which would allow the report to be made in its present form, and he then eliminated from the company's income and disbursement accounts all the padding resulting from cross-entries, where no money is either received or paid." The company has had an experience of over fifty years, has nearly 300,000 policy-holders and annuitants, and holds $174,000,000 for the security of their contracts. Its accumulation policy, as explained, "contains no restrictions upon the insured, and embodies some unusual privileges in the way of days of grace, privilege of reinstatement, cash loans and non-forfeiture conditions."

TRADE STILL QUIET.

BUT HEAVY EXPORTS OF AND HIGHER PRICES FOR WHEAT AND AN ADVANCE IN IRON AND STEEL QUOTATIONS ARE FAVORABLE FEATURES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, January 17.—The tone of trade continues quiet in most departments, with operations moderate. The money market shows high rates, and this tends to keep borrowing down. The tone is easier at the close, and the tendency appears to lower rates. Commercial paper has been sold at 6@7 per cent., while collateral loans range all the way from 6@9 per cent. The boot and shoe market is yet quiet in all departments, with buyers working hard to get lower prices. Leather is being worked down somewhat in price, but hides show great steadiness under a dull demand. The iron and steel trade is quiet, and values are rather easier for structural material. Pig iron is showing a better tone. Lumber is quiet, but the market is steady. Coal is quiet.

Providence, January 17.—General business remains quiet. Manufacturers of woolen goods generally are not making money, but find it cheaper to run than let their machines lie idle; they are running only part capacity. The print cloth mills report no demand this month, but no curtailment of the production is proposed. Some of the rubber shoe manufacturers of this section are shutting down. There is a disposition to save money, and savings bank deposits are noticeably large.

Philadelphia, January 17.—There is little doing in wool. Trade in textile lines is dormant. Clothing manufacturers regard the outlook unfavorable, particularly west. Dry goods jobbers say business is fair. Leather somewhat unsettled, owing to the failure of several of the larger glazed kid manufacturers, which, it is thought, will have a tendency to cause a decline in prices of certain grades. Groceries and provisions are in fair demand, with prices well maintained, but collections are difficult. There is a small movement in tobacco and a fair inquiry, but generally prices are low; no disposition to force sales of Havana, as there are no prospects of a new crop for a year or two, and stocks on hand enhance in value daily. Iron is quiet and prices are low. There is more inquiry, however for special kinds.

Pittsburgh, January 17.—Trade conditions have not changed materially, but jobbers are hopeful of a large spring business. Collections are fair and the general outlook is promising. The iron market has taken a sudden change, and prices of all raw material have advanced, which is attributed to the shutdown of a number of furnaces, together with

the refusal of furnace people to pay $2 per ton for coke. By some it is believed only a temporary advance, while others think it will go higher. There are but few sales at any price, both buyer and seller seemingly being willing to wait until the market assumes a more settled shape.

Buffalo, January 17.—General trade is improving and larger in volume than at the corresponding date last year. A noticeable improvement is also reported in collections.

Baltimore, January 17.—The two weeks of the present year have opened up in a very encouraging manner, and orders in many lines are coming in in excess of those for the same period last year. In dry goods travelers are out and report a satisfactory condition. In crockery trade is just opening, with bright prospects. In millinery there is an increase of business. In fact, in all trades interviewed, a satisfactory condition is reported. Collections are good.

West and Northwest.

Cincinnati, January 17.—General business dull.

Cleveland, January 17.—Wholesale trade conditions, as is usual at this season, are quiet, and orders are mainly for spring shipment. Collections average up reasonably satisfactory.

Chicago, January 17.—Orders for spring goods are being received in fair quantities for dry goods, clothing and shoes, but reports from the traveling salesmen are irregular. Some are getting plenty of orders, while others find it difficult to secure any. In part of Iowa reports say that the money is tied up in corn, and merchants are not selling anything to speak of, so that they do not feel disposed to buy goods. This also makes collections slow. There is more inquiry for bar iron and steel. Bar manufacturers in session here Thursday made no change in prices. Billets have advanced $1.25 within a week, and large sales are in contemplation. A better feeling exists in pig iron, and holders are less disposed to press sales. Tanners are selling more leather, but say that manufacturers only buy as they want stock. Packers' hides are held firmly, but country lots are easier. Produce trade slow. Poultry is higher on lighter receipts, and eggs are lower, with increased offerings from the south. Wool receipts, 70,127 pounds. Grain carriers and packers are borrowing fairly. Deposits are low, but are not being reduced as fast as at the first of the year. A great deal of money has gone to the country and will be slow coming back, so that the banks are in a position where they must wait until spring, when the corn in the cribs will be marketed. Collections are fair.

Detroit, January 17.—The midwinter quiet still prevails, orders being reported light in all lines. Collections are still slow.

Louisville, January 17.—Jobbers in dry goods and clothing report a fair order trade, and sales for spring delivery in the latter line in many instances exceed those of last season. Boot and shoe business is quiet, orders mostly confined to current requirements. Collections are fair. Money in good demand.

St. Louis, January 17.—General trade is fair and satisfactory for the season. Orders are largely for staples and of a filling-in character, but manufacturers and jobbers expect a betterment in the near future. There is considerable call for lead, which imparts a healthier feeling. Provisions are strong and higher. Demand for pig iron is improving, but is confined to small lots and quick shipments. The larger concerns are making inquiries for greater amounts for delivery in two or three months. Iron and steel bars are unchanged, with advances on coke and Bessemer ore. Some disposition is shown to buy ahead. Banks report a good miscellaneous demand for money.

Kansas City, January 17.—Dullness prevails in all lines of trade, owing to unseasonable weather. Collections are fair. Corn crop still immovable, but southern counties in Kansas report large quantities being fed to live stock. Good demand for packing-house products, with fair values.

Milwaukee, January 17.—Quiet still prevails in most lines of business. Collections are fair.

Minneapolis, January 17.—Trade generally is about as usual at this season, staples alone showing any active movement. Advance orders received for farm machinery, dry goods, boots and shoes and hats are very satisfactory. The suspension of two state banks was not a surprise in banking circles and causes little uneasiness.

Duluth, January 17.—Jobbing trade is quiet, but improving. Flour mills are fairly busy. Lumber trade feeling better in consequence of recent snows in pineries. Slight improvement in local money circles, and some English money here for investment.

Omaha, January 17.—Trade among jobbers in all lines is reported very quiet and collections slow.

Southern Cities.

Charleston, January 17.—Business in all lines quiet. Collections only moderate.

Savannah, January 17.—Trade is fair, with increased collections. Rosin and turpentine receipts about the same; shipments for both light. Spirits firm.

Atlanta, January 17.—Wholesale dry goods, shoe, groceries and hardware merchants report good sales. Retail trade quiet. Collections are satisfactory.

Augusta, January 17.—General business in all lines is quiet. Collections fair.

Birmingham, January 17.—Trade improves very slowly. Collections slow.

Jacksonville, January 17.—Trade is fair, with good collections.

Chattanooga, January 17.—Spring trade in dry goods, etc., has opened satisfactorily. Otherwise business remains stationary.

Nashville, January 17.—Trade continues quiet; has not revived since New Year's. Country collections fair. Collections slow. Money working closer, with an increased demand over last week. Stock market inactive.

Memphis, January 17.—General trade shows no material change. Country collections are fair.

New Orleans, January 17.—Improved demand is reported in all jobbing lines. Tone is healthier. Sugar in good demand, with moderate arrivals. Clean rice is fairly active. Brisk demand for rough. Money in active request for trade purposes.

Galveston, January 17.—Jobbers in all lines report business very quiet and collections slow.

Pacific Coast.

San Francisco, January 17.—Commercial lines quiet. Produce fair; prices slightly higher. Cereals unchanged. Wheat freights weaker. Collections slow. Two days' rain, with prospects of continuation, causes general rejoicing.

Portland, January 17.—There is little change in trade conditions. Business is somewhat sluggish, owing to unusually cold weather. Collections are fair. Wholesale houses are sending their salesmen out, and it is expected that country orders will increase.

Seattle, January 17.—With the exception of large shipments of general goods to Alaska, trade generally has been quiet. Seattle exports for December were valued at $220,082; imports, $99,009.

Tacoma, January 17.—General trade is quiet, but meets expectation. Wheat movement fair. Cotton and cotton fabrics arriving in large quantity for shipment to the Orient. Order received here from England for cedar doors.

Canada.

Toronto, January 17.—Wholesale trade is quiet and featureless. The movement is not expected until February. Country trade is said to be better. There are further advances in prices of flour and wheat.

Montreal, January 17.—Trade is restricted generally in this province, owing largely to the lack of snow. Several lumber concerns have been obliged to abandon work in the woods, and if present conditions continue the lumber market will be in an awkward position next spring. Jobbers in dry goods, hardware and groceries report trade normal, and since the first of January payments have been fairly good. Quebec city reports business quiet and generally dull.

Halifax, January 17.—Business in all lines is very quiet. The collections are hardly up to the average. More seasonable weather has rendered the roads throughout the country much better, and the outlook is more encouraging to dealers in produce and lumbermen. Newfoundland reports the frozen herring fishery a failure, attributable to the mild weather.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JANUARY 4, 1896, TO JANUARY 10, 1896, INCLUSIVE.

Cotton.

The exports of raw cotton during December and the three months ending December 31, 1895 and 1894, are officially reported as follows:

DECEMBER.

	Bales.	*Pounds.*	*Values.*
1895	745,099	371,586,644	$30,748,463
1894	1,223,114	615,920,498	34,596,756

FOUR MONTHS ENDING DECEMBER 31.

1895	2,248,079	1,127,582,826	94,550,400
1894	3,615,680	1,835,949,220	106,319,843

Exports of Live Stock and Provisions.

Exports of live stock, meats and dairy products for the periods set forth are officially reported as follows:

DECEMBER.

	Quantities		Values	
	1895.	1894.	1895.	1894.
Cattle, number	29,931	23,737	$2,754,972	$2,249,471

Dry Goods.

[Special to BRADSTREET'S.]

Trade is opening fair in a quiet way in jobbing departments, but with first hands business is yet slow. Cotton goods are dull with agents, and the tone is a trifle easier. Goods on hand have been shaded a fraction in price in order to sell, but for goods to be made manufacturers will make no concessions. The price of raw cotton has weakened a trifle, but the raw material is yet costing above the parity of the price of the made-up goods in many instances. Printed fabrics are opening quite well, and jobbers are meeting with a good distribution. Staple ginghams are opening well and give promise of a good sale. Dress woolens are meeting with a good jobbing movement, a fairly active order business through salesmen on the road being noted. Agents yet report a quiet business. Men's-wear woolens are in fair demand, but the market yet lacks life and activity.

Wool.

[Special to BRADSTREET'S.]

The tone of trade is quiet, sales for the week ruling small, but the market holds firm. The London auction sale opened Tuesday, with prices on choice grades of merinos about 5 per cent. higher, while American buyers were active in the competition. This has strengthened the market on this side, although buyers are holding back at any advance. Fleece wools felt the effect of the foreign market more than territory grades, as the former come more closely in competition with Australian grades. Sales of fine merino Australian wools have been made at 25c. in the grease, while some very light shrinkage lots are held at 26@27c. This is a sharp advance on these wools compared with a year ago. Territory wools are held firm at former prices, but sell slow. Carpet wools are quiet but steady. Next auction sale of East India carpet wools opens in Liverpool Monday.

Petroleum.

Exports of mineral oils and its products during December and the twelve months ending December 31, 1895 and 1894, compare as follows:

CORN GOING TO THE GULF.

The low rates made by western roads on corn and wheat shipments to Galveston, New Orleans, and other ports on the Gulf of Mexico have aroused Chicago grain men. Kansas City also finds grain shipments have been diverted, going direct to the gulf from Kansas and Nebraska points. Regarding the situation the Chicago *Tribune* says:

"Not one-tenth of the injury is inflicted upon Chicago by the discrimination of the southern roads in the matter of rates against the business interests of the city that is now being done by the diversion of the grain traffic from Missouri river points and beyond from Chicago to New Orleans and Galveston. Up to a year or two ago nearly all the export grain from Missouri river points and the vast country west thereof was shipped to seaport points via Chicago and St. Louis. Now the bulk of this business is going backward to New Orleans and Galveston, and is taken by steamers thence to foreign countries. As the export grain traffic via New Orleans and Galveston is being developed, it is bound to spread gradually to the import traffic, for the vessels carrying grain from New Orleans and Galveston to Europe will take import freight on the return trip at much lower rates than the vessels plying between European ports and the eastern seaboard. With a difference in rates of 30c. per 100 pounds in favor of Galveston and New Orleans, it is but natural the export business is no longer going via Chicago and St. Louis. A rate about 10c. higher from Missouri river points to New York than to New Orleans and Galveston could be tolerated on account of the better ocean rates obtainable at New York, but a 30c. difference, if allowed to continue, is bound to inflict immense injury upon Chicago, St. Louis and New York, and will in a short time work a complete revolution in the export traffic of the country, as under such circumstances only grain from Iowa and the northwest will be exported via the eastern seaboards.

"Chicago claims that the Missouri Pacific is primarily responsible for the discrimination in favor of New Orleans and Galveston. It was Jay Gould's ambition for many years previous to his death to make New Orleans the great export center for the grain traffic from the west. George Gould now seems to be animated by a special desire to carry out the long cherished plan of his father."

Chicago *Times-Herald:*

"Of the cars of corn shipped from Nebraska and Kansas from November 1 to December 24, 1895, the distribution was as follows: New Orleans, 2,796; Galveston, 1,238; Mobile, 13; St. Louis, 744; Baltimore, 24; Philadelphia, 30; Norfolk, 1,147; Port Royal, 98; Burlington, Iowa, 212; Beardstown, Ill., 217; total, 6,519. In all probability, most of the corn which went to Burlington, Iowa, came to Chicago; thus Chicago probably received less than 200 cars out of a total shipment of 6,519 cars.

"As having direct bearing on the above a prominent Galveston business man commented as follows:

"'For years past deep water on Galveston bar has been constantly agitated, at first by Galvestonians ably supported by the *News;* later the great west, appreciating the advantages offered them by having a gulf outlet for their products, joined hands with Texas and Galveston, and as a result of their combined efforts, the federal government appropriated the $6,200,000. When work was begun under the appropriation there were 13½ feet of water on our bar; to-day the government survey shows a depth of 20½ feet, and it is predicted that there will be 25 feet within the next twelve months. But the present depth of water is practically sufficient to meet all requirements for export and import business.

"As before stated, the great west joined with us to obtain deep water, in which they, like ourselves, possibly had a selfish motive. The argument used was that Galveston was nearer the grain fields of Kansas, Missouri, Nebraska and Colorado than either New York, Atlantic ports or New Orleans, all of which, being correct, should make Galveston the national export outlet for the western grain crops. The Atlantic seaports had just as well understand now that the grain from west of the Mississippi will in future be exported through Galveston and New Orleans.

"The large movement of corn during the past two months through Galveston has demonstrated that deep water was all that was necessary to develop this business, and as a result of this movement the farmers of the west have realized from 3c. to 5c. per bushel more for their corn than they would have done had it been forced to go via Chicago and St. Louis, thence to Atlantic seaports, paying a through freight rate of, say, 40c. per hundred, as against 25c. or less to Galveston and New Orleans. This difference of 15c. per hundred, equal to 8.40c. per bushel, is left in greater part in the hands of the western farmers, to be in turn distributed among her merchants and people.

"This gulf movement, though only sixty days old, has already aroused the grain dealers of Chicago, St. Louis, Kansas City, and the railroads running east from these cities to New York and other Atlantic ports, and as a result a meeting was held in St. Louis on January 2 of freight agents representing the Missouri Pacific, Rock Island, Missouri, Kansas & Texas, Atchison, Topeka & Santa Fé, 'Frisco and others. At this meeting we find representatives from Chicago, St. Louis and Kansas City, all demanding an advance in freight rates to the gulf, so that all grain grown in the west must pay tribute to one or more of these cities before reaching tidewater. Kansas City demands that the roads leading south discontinue allowing grain to be shipped from interior points direct to Galveston and New Orleans, but insists that all shipments be made through Kansas City on what is known as the 'reconsignment plan,' under which, if practically carried out, means that for the same rate of freight any of the roads running from middle or southern Kansas would haul grain from, say, Wichita or other points into Kansas City, thence back through Wichita to Galveston, for the same rate as they would haul the same car of grain direct from Wichita to Galveston. This is all wrong, and unjust to producers as well as to the gulf ports. Until the present time Galveston has not been in a position to proclaim herself a grain market, but conditions are now changed, and Galveston should be recognized by all railroads as much a grain market as Chicago, St. Louis and Kansas City, and shipments be allowed to come direct from the fields to Galveston, without paying tribute to the above cities, which have heretofore controlled the grain business of the west.

"This question of freight rates, etc., has been referred to Mr. Faithorn for arbitration.

"Galveston should lay before him her just claims, and now is the time for our people to assert the right of Galveston as a grain market and entitled to low freight rates. It is going to be a fight with the western grain centers and eastern roads on the one side, against Galveston, New Orleans, the western farmer and the roads running south to the gulf on the other. We must win in the end, but don't want to lose any time in getting what belongs to us by virtue of our geographical position, and the west should not be deprived of the natural advantages which will also accrue to them as a result of their fight for deep water."

KEEPING ROADS GOOD.

The *L. A. W. and Good Roads Bulletin* states that the Road Improvement Association of London, England, recently issued a circular containing seventeen rules for the guidance of roadmasters in keeping macadam and telford roads in proper repair, as follows:

1. Never allow a hollow, a rut or a puddle to remain on a road, but fill it up at once with chips from the stone heap.

2. Always use chips for patching and for all repairs during the summer season.

3. Never put fresh stones on the road if, by cross-picking and a thorough use of the rake, the surface can be made smooth and kept at the proper strength and section.

4. Remember that the rake is the most useful tool in your collection, and it should be kept at hand the whole year round.

5. Do not spread large patches of stone over the whole width of the road, but coat the middle or horse track first, and when this has worn in coat each of the sides in turn.

6. In moderately dry weather and on hard roads always pick up the old surface into ridges six inches apart, and remove all large and projecting stones before applying a new coating.

7. Never spread stones more than one stone deep, but add a second layer when the first has worn in, if one coat be not enough.

8. Never shoot stones on the road and crack them where they lie, or a smooth surface will be out of the question.

9. Never put a stone upon the road for repairing purposes that will not freely pass in every direction through a two-inch ring, and remember that smaller stones should be used for patching and for all slight repairs.

10. Recollect that hard stones should be broken to finer gauge than soft, but that the two-inch gauge is the largest that should be used under any circumstances where no steam roller is employed.

11. Never be without your ring gauge; remember Macadam's advice, that any stone you cannot easily put into your mouth should be broken smaller.

12. Use chips, if possible, for binding newly-laid stones together, and remember that road sweepings, horse droppings, sods, or grass and other rubbish, when used for this purpose, will ruin the best road ever constructed.

13. Remember that water-worn or rounded stones should never be used upon steep gradients, or they will fail to bind together.

14. Never allow dust or mud to lie on the surface of the roads, for either of these will double the cost of maintenance.

15. Recollect that dust becomes mud at the first shower, and that mud forms a wet blanket which will keep the road in a filthy condition for weeks at a time, instead of allowing it to dry in a few hours.

16. Remember that the middle of the road should always be a little higher than the sides, so that rain may run into the side gutters at once.

17. Never allow the water tables, gutters and ditches to clog up, but keep them clear the whole year through.

Every roadmaster and supervisor should cut these rules out and paste them in his everyday hat. To make a good road is one thing, and to keep it in good repair is quite another thing.

The fine roads in Europe are the result of a splendid repair system, where every defect is promptly corrected before it has time to cause serious damage to the highway.

PLANS OF THE NATIONAL ASSOCIATION OF MANUFACTURERS.

The regular New York correspondent of the Philadelphia *Press* writes that paper that at a meeting of the Philadelphia Manufacturers' Club, in March last, at which prominent out-of-town manufacturers were present, the National Association of Manufacturers was formed. It was then and there decided that the first annual convention of the National Association should be held in Chicago on January 21, 22 and 23, 1896. "In the west the meeting of these representative business men and manufacturers is a topic of interest second only to the important national subjects which this winter have so commanded public attention. * * *

"The identification of Mr. Dolan, of Philadelphia, with the association, and of Warner Miller, of New York, sufficiently indicates the character of the men who are interested in this undertaking. * * * Yet the association is essentially a non-partisan one. Its members come from either of the great national parties."

At the meeting which is to be held in Chicago next week the association will give "especial attention to the subject of the Nicaragua Canal. Members of the association from all parts of the country have in their correspondence declared that they have found public opinion not only overwhelmingly in favor of the construction of the canal by federal assistance, but also in favor of federal control of that canal." This project is one with which Mr. Miller is familiar. "He has personally inspected the canal. He was president of the Nicaragua Canal corporation. He has visited Europe in its financial interest. He has studied the project both in its financial and political relation to the development of the United States, and he is convinced that when Congress feels the force of public opinion, the Nicaragua Canal will receive such aid as will insure its completion in a comparatively short time.

"Since Mr. Miller made his address of last year to the association some very important new considerations have been presented, especially to the people of the west, in connection with the Nicaraguan Canal project. It is now as certain as anything in the future can be that Chicago will before very long have an artificial waterway which will enable that city to extend its commerce by water to the gulf, as it now does to the Atlantic.

"The Nicaragua Canal is as essential to the full development of the vastly improved and enlarged water commerce of the Mississippi valley as is the Chicago drainage canal, to say nothing of its important relation to the commerce of the rest of the United States and of the world.

"Mr. Miller, in speaking * * * about the purposes of the association, said that the advocacy of the Nicaraguan Canal and the completion of that great work would necessarily involve a colossal enlargement of the artificial waterways of the country east of Chicago. It would make it imperative that a ship canal be built around Niagara Falls upon the American side, and another be constructed from the St. Lawrence or from Lake Ontario to the tidewater in the Hudson. These works being necessarily undertaken by the federal government, it might involve also the construction of a ship canal across the lower peninsular of Michigan and one from Pittsburgh to Lake Erie.

"These projects of transcendant importance the National Association will, by constant agitation, make the people of the United States familiar with, so that by-and-by there may be such commanding public opinion as will compel Congress to authorize their construction.

"Another most important subject which it is expected will be earnestly discussed at the convention

in Chicago will be the urging upon Congress of such legislation as will make it possible for vessels owned by American capital to sail under the American flag. The proposition, Mr. Miller says, is justified by recent experiences, for special legislation resulted in the creation of the American Transatlantic line, and in the building of two ocean steamers which are as fine types of marine architecture as sail the waters, at the Cramps' shipyards at Philadelphia. What was done for the American line it is the purpose of this association to secure for other steamships owned by American capital. Recently an important line was established with semi-monthly steamers, which brought New York into direct commercial relations by water with the western coast of South America. This line is owned by American capital, but its steamers do not sail under the American flag. The convention proposes to go a step further, perhaps, than any other political party in the United States has ever gone, for it is its purpose to insist that the United States government shall do as the governments of Europe have done—encourage its own commerce through the payment of bounties or subsidies, although this purpose may be disguised if it be thought best by calling it payment for postal service.

"Another thing which the association proposes immediately to agitate until Congress pays heed to its request is the establishment of reciprocity with foreign countries in trade relations. There will be no political note permitted in the reciprocity discussion. The purpose of the association is that partisan politics shall be wholly ignored. But it is proposed to show that under reciprocity treaties recently abandoned in the wisdom of the present administration the United States was surely creating a great and what would ultimately become a predominant trade with the South and Central American countries. This trade, if the National Association has any influence in the future, will be restored to the United States. In fact, one of the chief purposes of this association is the establishment by legislation and the creation by well-organized business methods of such commercial supremacy for the United States upon the two American continents as will be impossible for any countries of the other hemisphere to take away.

"Already the Argentines are pushing their railway system up through Bolivia and toward the vast and enormously rich plains of Peru. The commission established by Mr. Blaine's influence has surveyed the equatorial region, and so on northward through the Isthmus of Panama and the Central American states to Mexico, and has reported that it is practicable and, except in a few places, comparatively easy to construct a railway system from Mexico through the isthmus, across the Andes, thence extending southerly until there is a meeting with the railway which is slowly but surely creeping northward from the Argentines. The Andes have already been surmounted by two railways within the past five years. All that is needed for the development of the South American trade in such manner as will give the United States the mastery over its markets, through the reciprocal acceptance of South American products, is favoring legislation and a restoration of business prosperity.

"That is the colossal purpose of the National Association of American Manufacturers. South America, the Nicaragua Canal, the American flag for American steamers, and an extensive system of artificial waterways. The association does not propose simply to meet once a year, listen to discussions and have a good time. The yearly meetings are to be a mere incident. * * * The National Association is organized upon a sort of federative plan. Each state in the Union has its subordinate association, and for each state there is a vice-president. * * *

"It proposes to issue, * * * as often as the occasion justifies, publications, bulletins and statistics, which will be laid before the American people. It proposes an exhaustive system of trade statistics, by which American manufacturers may keep constantly informed about trade conditions. It will perform the function of a sort of national commercial encyclopedia or trades news association. It proposes to appear before congressional committees in advocacy of important legislation, being prepared to show to Congress that it represents the business and commercial sentiment of the United States.

"During the year it has been made apparent that the purpose of the association was most cordially indorsed by many representative business men in all parts of the country. In the larger cities of the south a great deal of interest has been taken during the year in the association."

BUSINESS FAILURES.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S the weekly financial and commercial newspaper, published by the proprietors of The Bradstreet Mercantile Agency, is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

INVESTMENTS.

INCOME SHARES

CLASS "C" COUPON SHARES are sold at $85. per share, together with a purchase premium of $5. They pay a fixed preferred dividend of 6% per annum on the par value of $100. per share or 6⅔% per annum on the money invested.

Dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any bank.

CLASS "D" COUPON SHARES are sold at par, $100., together with a purchase premium of $10. Fixed dividend of 8% on par value or 7 $^{27}/_{100}$% on money invested. Coupons payable January 1st. Collectable through any bank.

Withdrawable after sixty days' notice, together with dividend accrued thereon.

The desirability of these shares, from which to derive a cash income, is unquestionable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 25, 1896.

Unusual interest is expected to attach to the proceedings of the National Board of Trade which is to convene in Washington on January 28. A report of a committee appointed last year to investigate the consular service of the United States will be submitted. Resolutions relating to the currency will be presented by a number of commercial organizations, as will resolutions looking to the improvement of the navigable waterways, and, in particular, the establishment of deep-water canals. Several propositions looking to the amendment of the Intersate law, particularly in the direction of allowing the railroads engaged in interstate traffic to enter into pooling arrangements under the supervision and control of the Interstate Commerce Commission.

Another effort will be made to stir up Congress to pass a national bankruptcy law. A strong memorial will be presented by the Merchants' Exchange of St. Louis, reaffirming the position heretofore taken by the National Board of Trade in relation to bankruptcy legislation. It is insisted in this memorial that the varying and uncertain provisions of the assignment laws of the different states and the delay and expense incident to civil suits do not meet the exigencies of business and the prompt adjustment of relations between the debtor and creditor classes. That creditors should be protected against unjust preferences, and that an honest but insolvent debtor who has been unfortunate in business should have an opportunity for freedom of action and renewed energy, are declared to be incontestable propositions having expression and indorsement in the laws of all enlightened nations. It is pointed out, however, that uniformity on the subject of bankruptcy is only possible through the power conferred on Congress by the Constitution, and that there is a pressing demand at the present for the exercise of that power on fair and liberal principles. During our national history this power has been exercised three times for brief periods, and a sensible, if temporary, relief was experienced in the business world as the result of the action taken. It is believed that a bankruptcy system on wiser principles than any of the preceding can now be established on the lines laid down in the Torrey bankruptcy bill, whose early consideration and passage is earnestly urged.

Comptroller Eckels has this week made public the result of his inquiry into the condition of the national banks of December 13 last. The 3,706 banks covered by the report had $2,020,960,000 in loans and $1,720,550,000 in individual deposits. Of the specie holdings, which amounted to $206,712,410, over $168,000,000 was in gold. This represents a gain of a little over $5,300,000 as compared with September 28. The largest amount of gold held by the banks in any state was in New York state, whose banks held $57,708,485, or more than a third of the whole. Illinois came next with $20,643,508, Pennsylvania third with $17,775,431, and Massachusetts fourth with $12,502,689.

If present indications are to form a basis for conjecture, the free-silver men may take the field with a presidential candidate in the electoral campaign of this year. They have decided to hold a convention in St. Louis on July 22. This action was taken by a conference held in Washington this week, which adopted an address declaring that "the paramount issue at this time in the United States is between the gold standard, gold bonds and bank currency on the one side and the bimetallic standard, no bonds and government currency on the other;" that they "are unalterably opposed to the single gold standard, and demand the immediate return to the constitutional standard of gold and silver, by the restoration by this government, independently of any foreign power, of the unrestricted coinage of both gold and silver into standard money, at the ratio of 16 to 1, and upon terms of exact equality, as they existed prior to 1873; the silver coin to be a full legal tender, equally with gold, for all debts and dues, public and private."

Anthracite coal interests are hopeful that the present efforts to restore the trade to a healthy condition will be crowned with success. The overproduction of coal and the consequent demoralization of the market for that commodity has, indeed, gone to such lengths that it is only surprising that there has been such delay in taking steps to remedy it. The meeting of the presidents of the anthracite railroads and other leading representatives of the trade was not productive of immediate results. The feeling of the meeting was, however, favorable to a harmonization of interests and a restriction of the output which would adjust it more closely to the demand. The extent of the overproduction may be gauged by the figures first made public of the Thursday's meeting, which show that the amount of coal mined in 1895 was about 46,500,000 tons, or 1,000,000 tons more than the largest previous record—that of 1893.

In response to a Senate resolution asking what action has been taken in regard to the payment of the appropriation for the bounty on sugar contained in the last Sundry Civil bill, the President has transmitted a communication from Secretary Carlisle which he says contains all the information available on the subject. In this communication, which submitted certain claims for bounty to the Chief Justice of the Court of Claims, the Secretary declared that the claims in question involved controverted questions of law, and that the authority, right and privilege is claimed and denied under the Constitution of the United States. The decision, the Secretary declared, would affect a class of cases and furnish a precedent for the future action of the proper accounting officers. The Secretary has within the week approved a schedule for the payment of drawback on exported refined sugar equal to the duty paid upon the raw sugar, less 1 per centum of the duty paid on the raw sugar contained therein. On 100 pounds of refined sugar made from raw sugar testing 90 degrees it is held that $118^{67}/_{100}$ of raw sugar has been used, and for each higher degree of test of the raw sugar a deduction of about $1^{8}/_{10}$ pounds will be made from the amount of raw sugar allowed.

The Venezuelan Boundary Commission has addressed to Secretary Olney a communication requesting him to use the good offices of the State Department in helping the commission to secure information to aid it in the discharge of its functions. President Brewer suggests to the Secretary the expediency of calling the attention of the governments of Great Britain and Venezuela to the appointment of the commission, and explaining both its nature and object. It may be, he says, that they will see a way entirely consistent with their own sense of international propriety to give the commission the aid that it is no doubt in their power to furnish in the way of documentary proof, historical narrative, unpublished archives or the like, and if either should deem it appropriate to designate an agent or an attorney, whose duty it would be to see that no such proofs were omitted or overlooked, the commission would be grateful for such evidence of good will and for the valuable results which would be likely to follow therefrom.

A vigorous indorsement of the policy of protection in tariff legislation was the keynote of the proceedings of two gatherings held at Chicago this week, namely, the National Association of Manufacturers and the Conference of Textile Manufacturers. The addresses delivered before the conventions were pitched in a spirit of criticism of the existing tariff law, which was declared, in the address of the president of the National Association, to be inequitable and insufficient in two particulars, both as giving to certain industries favors not extended to others and as not according to producers in many of its schedules the protection they require. The suggestion was made in this address that the association should undertake to employ, by proper methods, its influence to obtain as speedily as possible changes of the tariff in harmony with the views outlined.

The President has sent to the Senate in response to a resolution a report from the Secretary of State relative to the rights in Turkey of naturalized citizens of the United States of Armenian birth. Secretary Olney refers to the published correspondence for the past two years and to statements made by the President in recent annual messages to show that the Turkish government claims the right to exclude from the Ottoman territories, or to deport in case they be found therein, naturalized citizens of the United States of Armenian birth who have become such naturalized citizens without imperial consent since the year 1869. The enforcement, he says, of this right of sovereignty has not been opposed, nor has remonstrance been made except in the case of arrest or punitive proceedings against the parties on the ground of their having become citizens of the United States without imperial permission. Despite the Turkish law on the subject, however, no instance has occurred where the Turkish government has attempted to punish a person for becoming a citizen of a foreign state.

There has been no dearth of diplomatic incident during the last month or two, but no more striking occurrence has been presented for the consideration of publicists than the reported Russo-Turkish alliance. This is said to be an alliance offensive and defensive, and to be based upon the lines of an agreement giving Russia a large degree of control over the international action of Turkey. A treaty is said to have been already signed. This is all that can be said about the matter with the information at present at hand. In diplomatic circles in Europe generally ignorance of the existence of any such agreement is professed, but recent developments in the East have rendered the news less surprising than it would have been at any other time during the last two decades.

AN EASIER MONEY MARKET.

As will be seen from the records of the stock and money markets during the present week, there has been a marked subsidence of the apprehensive feeling heretofore noted in regard to the effects of the government bond subscription to be closed on February 5. While the idea that the dissolution of the Morgan bond syndicate is, on the whole, a bad thing, and renders the placing of the bonds a little more troublesome to the money market, still finds expression, there is no longer any disposition to consider the situation as at all dangerous, or as involving the likelihood of extreme stringency and excessively high interest rates. Without question, Secretary Carlisle's supplementary circular of the 15th inst., extending the time for payment of subscriptions to the bond issue over a period of five months, had a reassuring effect upon those who concluded that the allotment of the bonds by public subscription would result in what was termed a "scramble" for gold and corresponding derangement of the money market. Since the circular in question was issued no further official announcements on the subject have come from the Treasury Department. Nevertheless, it is well understood that the disposition of the Secretary is to render the transaction as easy as possible, and to avoid the possibility of any disturbing effects in business and financial circles. Consequently, there is a probably well-grounded belief in such quarters that if necessity, which now seems unlikely, should arise, steps of an appropriate character will be taken to further facilitate payments for the bonds.

The immediate effect upon the money market itself has been beneficial. The past week has been marked by a much calmer tone and a disappearance of unsettling tendencies. It is true that a premium of from ⅜ to ⅝ per cent. has continued to be quoted for gold and legal tenders. The gold importations of the week from Europe foot up about $1,150,000, and offset to that extent the gold exports of $2,500,000. The situation in this respect would, indeed, lead to no other conclusion than that parties importing gold for use in the payment of their bond subscriptions virtually create the gold exports through the remittance of exchange with which to pay for the specie in London. The fact that a premium was also paid for legal tenders, and that this presumably represents an accumulation of this class of government obligations, in order to be in position to draw gold from the Treasury itself, does not escape attention. There seems, however, to be no method of meeting this defect in the monetary system of the country, and the outlook is that, to an extent which it is as yet impossible to estimate, the Treasury itself will furnish the gold which will be turned back to it in settlement for the new $100,000,000 loan. The money market indicates, however, a decidedly easier feeling, and it would not be an unwarranted assumption that the large institutions and corporations which may be looked to to bid for and secure the bulk of the new bonds have virtually completed their arrangements to that end. In the opinion of those qualified to judge, any demands upon the money market in this connection between now and February 5 will emanate from smaller interests, and are not likely to constitute such an aggregate that a decided strain on the money market will result. Tangible evidence of this is offered by the fact that time money is again offered with a certain amount of freedom. A week ago, it will be remembered, the market was bare of such funds. Those in a position to lend evidently labored under the impression that the closing of the bond subscription might be attended by some weeks of high money rates, justifying them in retaining their surplus cash for such a contingency. In the same manner there was a disinclination to discount commercial paper, the market for which was of a very restrictive character for some days. These manifestations have now disappeared; banks, trust companies and other lenders have realized that the best policy of the moment is to accept reasonably high rates, as, for instance, 6 per cent. for time loans, running well into the spring months, than to hold back on the expectation of a few days of extremely high rates. The relief which this involved has been shown in the stock market, where the fear of tight money exercised a strongly deterrent influence upon speculative activity.

A UNIQUE STATISTICAL EXPERIMENT.

Records of business failures, so called, were originally kept in a very incomplete and desultory fashion, but during the past fifteen years reports of commercial, industrial and financial failures in business, based on exact definitions, have been gathered and compared with some regard for statistical completeness. The latter are the natural outcome of organization, as found in The Bradstreet Company, the primary purpose of which is to ascertain and distribute to those in interest considerations affecting the credit of producers and distributors in the business world.

Comparatively few, even among the busiest of busy men of to-day, have appreciated the extent, the ramifications, the detail, as well as the masterly organization required to operate the institution, which is the practical investigator and reporter of credit-ratings throughout the world. The mere statement that there were about 13,000 failures of individuals, firms and corporations "holding a distinct place in the business world" last year conveys but a faint idea of the enormous amount of work performed by this commercial engine, for the discovery of these 13,000 commercial deaths, as it were, requires the careful examination and reëxamination annually of detailed reports of more than 1,300,000 individuals, firms and corporations throughout the country, repeatedly, and the service of more than 125,000 correspondents at 78,809 cities, towns and post offices in the United States and Canada.

While this work has gone on for nearly half a century; while records of concerns for which ratings are furnished have grown from a list of names contained on a few printed leaves to more than 1,000,000 in number; while the offices of The Bradstreet Company have spread from a few larger eastern cities in the United States to the Dominion of Canada, the United Kingdom, the continent of Europe, and to Australia, no one had asked as to the degree of accuracy attained in reporting credits.

With no notion as to what the outcome would be, the company set to work six years ago to analyze its own credit-ratings, based on the successes and failures of those rated, with the idea of presenting to the commercial, industrial and financial community the results of such investigation, a test of its efficiency and accuracy.

This work was rendered the more practicable, as the business failure statistics of The Bradstreet Company were, and still are, the only like data in which both assets and liabilities are given, the only ones based upon a carefully prepared definition of what constitutes a business failure. As has been pointed out on previous occasions, it may be well to recall that business failures refer only to failures of firms, individuals and corporations (having an established place in the business community) which result in financial loss to creditors. In other words, business failures are such embarrassments as show actual assets smaller than total indebtednesses.

This will suggest at once that there is more than one kind of a "business failure," for there are undoubtedly many failures in business in which total assets are not smaller than total liabilities. No failure statistics can be useful unless compiled with these distinctions carefully in mind, and none other, therefore, are of value. This becomes plain when it is recalled that from 200,000 to 300,000 names of individuals, firms and corporations in business are annually dropped from and as many or more added to the number engaged in business, of which, to judge by an examination of reports during the past ten years, about 70 per cent. of those dropped are "failures to succeed," the remaining 30 per cent., about one-third, being merely "changes in business" or "changes in style of name."

This explanation and the facts accompanying it constitute a distinct contribution to data respecting business failures, and it remained for The Bradstreet Company, in its endeavor to serve the public and to furnish evidence of the efficiency of its work, to discover and make public information of this kind.

An examination of the records of the number of firms, individuals and corporations in business, together with the total number of failures in years preceding 1893, indicates that the total failures in business of both kinds—that is, those failing to pay what they owe and those which merely failed to succeed—amounted to about 11 per cent. annually of the total number of concerns recorded as having an established place in business, while the total number of those failing owing more than they could pay was only a fraction more than 1 per cent. annually.

From such interesting and valuable statistical discoveries is made plain the untruthfulness of a statistical lie which has traveled so far and wide for many years, "that 95 out of every 100 concerns or firms in business fail." No correction or contradiction ever caught completely up with a lie well started, and it is not our endeavor to perform the impossible with respect to this inaccuracy. As has been pointed out, the total number of concerns failing in business annually unable to pay their total indebtednesses is a fraction over 1 per cent., or, we may say, 1.15 per cent. or 1.20 per cent. This being the annual "commercial death-rate," who shall presume to say what the commercial lifetime is? If one chooses to arbitrarily define a "commercial lifetime" as twenty-five years, it would follow that the proportion of failures during the commercial lifetime in question would be about 30 per cent. of the total number in business, or 30 in 100 of those having an established place in business. But who may decide that twenty-five years is a fair statement of a commercial lifetime? How many houses which were doing business in New York city in 1870 are in business there to-day? And how many concerns which were doing business in New York city in 1870 have failed owing more than they could pay, not to refer to those which failed to succeed?

The total number of individuals, firms and corporations reported as having an established place in business in the United States and Canada in the calendar year 1895 is shown to have been 1,053,633, or 11,431 more than the number so reported the year before, when there were 17,000 fewer on record than in the year 1893, and 9,000 fewer than in the year 1892. The heavy proportion of changes in business during 1893 and 1894, as well as last year, in large part, it will be recalled, due to "failures to succeed," as well as to actual commercial failures, must explain this apparent check in what might have been expected in the way of increase in the number of firms, individuals and corporations in business throughout the country.

With the foregoing distinctions in mind, it is pointed out that this test of the work of preparing records of business concerns and business failures has reference solely to that class of failures in which liabilities exceed assets, the total number of which is practically a little more than 1 per cent. annually of the aggregate number in business.

There is relatively more than the usual amount of interest attaching to the voluntary, the public examination of one's own work in behalf of the business community at large. The company in question has been replying to from 4,000,000 to 5,000,000 questions annually regarding credits, and of a sudden it proposed to demonstrate and did show to what extent these replies to individuals, firms and corporations in the business world had been approximately correct. Now that the records of these tests are obtained covering the past five years, they have an added value as showing the margin of variation in the approximation towards accuracy.

Reference to classification of credit-ratings at the time of failure of concerns reported in the United States and Canada as having a very moderate or no credit rating indicates a slightly appreciable improvement in the degree of service rendered in reporting credits of those classes during 1895 compared with 1894. This is indicated in that such failures constitute more than 72 per cent. of the total number of all failures reported last year, whereas in 1894 the proportion of those failing with very moderate or no credit was only 71 per cent., and in 1893, the year of panic, 69.7 per cent. In four preceding years the proportion of those failing having moderate or no credit rating ranged between 92 per cent. and 93 per cent. of the whole number, but with the year of panic there was a marked falling off in the proportion of failing business enterprises of this grade, which were anticipated, owing to indeterminate and unusual influences which were brought to bear upon trade by the panic. The existence of unreasoning fright or panic introduces evils and influences into the business world which the commercial community themselves fail to estimate properly and promptly. It is during such periods that larger business concerns are the more frequently embarrassed, thus entailing a larger list of failures of small concerns. The somewhat disappointing aspect of business conditions in 1895 is quite in harmony with the moderate gain in the proportion of failures practically predicted among those having very moderate or no credit ratings.

The number failing in business in 1895

who were rated in good credit amounted to 26.2 per cent. of all who failed, as compared with 27.4 per cent. in 1894 and 27.1 in 1893, which, being the converse of what is shown concerning those in moderate credit, is a correspondingly slight improvement in the character of the service mentioned as compared with one, two and three years before. In years preceding the panic the proportion of failures of those rated in good credit ranged from about 6 to 7 per cent. only, by which may be judged the effect of the panic year 1893 and conditions affecting trade injected by it. The number of business houses which failed in 1895 while rated in very good credit or higher was 225, as compared with the same number in 1894, but as compared with 565 in the panic year 1893. In preceding years the total number of business houses failing while in good credit or higher was only 131 in 1892, 240 in 1891, 202 in 1890, and 169 in 1889. Failures of that character constituted from 1 per cent. to less than 2 per cent. of those failing in the four years last specified, more than 3 per cent. of the total number failing in 1893, but about the normal proportion in 1894, 1.6 per cent., and again in 1895, 1.5 per cent. This is an even better exhibit, relatively, than the improvement shown in those rated in good credit or those having moderate or no credit rating.

An examination of the proportion of those failing in business classified according to capital employed runs in parallel lines to those laid down, and is quite as instructive. During the years from 1889 to 1892, inclusive, the proportion of concerns failing in business which had only $5,000 capital or less was about 90 per cent. During the panic year the proportion ran down to about 85 per cent., and in 1894 it amounted to nearly 89 per cent., while last year it was less, about 87.3 per cent. of the total number of business failures. The proportion of concerns failing with over $5,000 and less than $20,000 capital ranged from 6.5 per cent. to 7.2 per cent. in the years 1892 to 1889, inclusive, increased to 8.5 per cent. in 1893, fell off to 7.6 per cent. in 1894, and advanced in 1895 to 8.6 per cent. of the total number failing. Business enterprises employing over $20,000 and less than $50,000 capital constituted from 1.7 per cent. to 2 per cent. of the total number of business failures in the four years ending with 1892, fully 3 per cent. of the total in 1893, 2.5 per cent. in 1894, and 2.6 per cent. last year. Business enterprises having more than $50,000 but less than $100,000 capital which failed in the years from 1889 to 1892, inclusive, averaged from three-fifths to about four-fifths of 1 per cent. annually, 1.5 per cent. of the total number in 1893, and eight-tenths of 1 per cent. in 1894 and in 1895. The total number of business concerns having more than $100,000 but less than $500,000 capital which failed averaged less than one-half of 1 per cent. annually during four years preceding 1893, but amounted to fully 1.5 per cent. in the year last named, to only four-tenths of 1 per cent. in 1894, and to seven-tenths of 1 per cent. last year. The 6 business failures in the calendar year 1895 which employed a capital of $500,000 and over are compared with 8 such failures in 1894, with 36 such in 1893, with only 1 in 1892, 18 in 1891, and 8 and 9 respectively in 1890 and 1889. Attention may well be called to the fact that only 1 business firm is reported for 1895 in which a capital was employed of more than $1,000,000, as compared with no such failure in 1894, with 14 in 1893, none in 1892, 3 in 1891, 5 in 1890, and 4 in 1889.

The foregoing comparisons would seem to indicate that the larger commercial concerns throughout the country have been first to employ the greater caution in the matter of conducting business in the last year or two, those following a year of panic, they having more rapidly approached the normal with respect to the effect upon them of underlying trade conditions.

In making reports of business failures care has been taken to record causes of embarrassments, and as these data have been collected now for a series of years, they acquire added value. It should be borne in mind that causes of business failure assigned are those to which failures are *primarily* due. For the purpose of this examination eleven primary causes of business embarrassments are classified as follows:

A.—DUE TO FAULTS OF THOSE FAILING.

I. INCOMPETENCE—(1) *Incompetence* (irrespective of other causes); (2) *Inexperience*, without other incompetence; (3) *Lack of capital*, or the reverse, (i. e.) trying to do too much business for capital employed, and (4) *Unwise granting of credits.*

II. NEGLECT OF BUSINESS—(1) *Speculation* (outside regular business); (2) *Neglect* (due to doubtful habits): (3) *Personal extravagance.*

III. FRAUDULENT DISPOSITION OF PROPERTY.

B.—NOT DUE TO FAULTS OF THOSE FAILING.

IV. DISASTER (flood, fire, crop failure, commercial crisis).

V. FAILURE OF OTHERS, of apparently solvent debtors.

VI. SPECIAL OR UNDUE COMPETITION.

The lesson of the first statistical comparison given, the test of reports of concerns which failed having very moderate or no credit rating, was that Lack of Capital continues a primary stumbling-block in the path of those in business, contributing one-third of the whole number of failures in 1895, which was also true the year before, the year before that, and in 1892. Next in importance as a cause of failure in business, more particularly since 1893, is that referred to as Disaster, in which business embarrassments due to Commercial Crisis, Fires and Floods are included. This total amounts to about one-fourth of the whole number of failures reported for 1895, which was also true in 1894, although the proportion was somewhat smaller in 1893, the outcome of the panic in that year being primarily responsible for the increased proportion. Inexperience or Incompetence in Business, irrespective of other causes, such as lack of capital or trying to do too much business for capital employed, or Unwise Granting of Credits, appears to be the cause of about the same number of failures in 1895 as in the year before, and the aggregate does not vary much from the corresponding total in 1894, although about one-third smaller than in the panic year 1893. There is less of comfort to be drawn from business failures due to Fraudulent Disposition of Property in 1895, 1,154 as compared with 1,022 in 1894, 1,142 in 1893, and 1,063 in 1892. These four classes of failures constitute three-fourths of the total number reported. The proportion of failures due to Lack of Capital was 33.2 per cent. in 1895, against 34.6 per cent. the year before and 33.5 per cent. in the year 1893. Business embarrassments which were the outcome of Commercial Crisis and influences based upon such disturbances amounted to 24.9 per cent. of the whole number in 1895, against 25.9 per cent. in 1894 and 22.3 per cent. in 1893. Failures due to Incompetence in Business amount to less than 14 per cent. of the total number in 1895, whereas in 1894 it was 14.1 per cent. and in 1893 16.4 per cent. Failures due to Fraudulent Disposition of Property amounted to about 9 per cent. of all failures reported last year, but in 1894 the total was only 8 per cent., and in 1893 it was only 7.4 per cent. We must therefore go back to 1892 to find any consolation, in which year the proportion due primarily to Fraudulent Disposition of Property was 10.3 per cent.

Classification of commercial failures throughout the Dominion of Canada (Newfoundland failures included) shows that 71.3 per cent. of all such embarrassments were caused by Lack of Capital, whereas in 1894 the proportion was only 68.5 per cent.; in 1893 it was 69.4 per cent. and in 1892 only 65.1 per cent., which exhibit is not entirely favorable. Next conspicuous among causes of failures, as is true in the United States, are those due to Commercial Crisis and to Incompetence. The Canadian and provincial failures due to Lack of Capital numbers 1,367 last year, and those due to Commercial Crisis, only 163, is marked. Yet there is a favorable side to reports of failures due to Commercial Crisis in the Canadian Dominion, although they amounted to 8.5 per cent. last year compared with 8.1 per cent. in 1894, because they are contrasted with 11.3 per cent. of the total number of failures in this class in 1892. Dominion and provincial failures due primarily to Incompetence in Business numbered 160 last year out of a grand total of only 1,916, or 8.4 per cent. of the whole; in 1894 similar failures constituted 10.4 per cent. of the total, thus showing a rather larger proportion of competence of those engaged in business last year than in the year previous.

It should interest all to know that the source of the information on which the foregoing statistics and credit-ratings are based, while procured by and distributed through The Bradstreet Company—*in order that the credit of solvent merchants and institutions may be made known and defended throughout the world*—is the business community itself. And it is instructive to realize that the results attained through this coöperation between the business community at home and abroad must reflect the confidence of that community in the particular work which has been assigned the institution in the permanent division of professional activity.

THE ANTHRACITE CONFERENCE.

It is a striking commentary upon the condition of the anthracite coal trade that during the year 1895 it was the only one of the country's great industries which failed to show decided improvement. This does not imply that the business of mining coal and transporting it to market was inactive. On the contrary, the production for the year was undoubtedly the largest on record; but this activity was entirely at the expense of prices, which have been on the lowest average level in many years. In other words, production has gone on without relation to the consumptive demand, and the railroad companies, the organizations through which they operate as miners of coal, and the individual owners of anthracite collieries have joined in a wild competition to oversupply the market. The results have been losses on the bulk of the coal sold and on its transportation, while at the close of the year the stock on hand unsold and at present unsalable is in excess of anything ever seen at this period of the year. The leading companies, so far as their reports have been made public, show losses instead of profits on their coal business, and the public, as well as the distributing trade, have been educated to a low range of prices, from which it will be very difficult to restore prices of coal to remunerative figures.

The failure of anthracite interests to adjust production to consumption has often been referred to in these columns during the past two years. The reason for it is not difficult to discover. It is chiefly because the same railroad organizations which transport the coal from the mines to the market also control the bulk of the production. The question of the proportion of the total tonnage which each of the seven or eight roads shall be entitled to is a vital one, and their managers have been willing to fight for what they consider their rights in the premises rather than accept smaller percentages as the price of remunerative figures and a healthy condition in the trade.

The Reading companies have occupied the position of the chief disturbers. The financial burdens which have twice swamped the Reading corporation were the result of its acquisition of a very large coal territory. In order to earn sufficient to meet its obligations it must develop its productive capacity to the utmost, and this implies that the other companies must concede to it a large percentage of the total output. The older solvent companies, like the Lackawanna and Delaware & Hudson, are naturally unwilling to sacrifice any portion of their own share of the business, or permit invasion of territory in which they have long supplied the demand. The question is also complicated by the attitude of the Susquehanna & Western and Ontario & Western, which have completed lines to the anthracite fields, and are also struggling to secure as large a part of the trade as possible. In spite of efforts to control the competition in the past few years, the various parties in question have caused constant friction, and efforts to abate it have proved unavailing. The Reading Company's last collapse and receivership brought the matter to a head, and the receivers of the property inaugurated an aggressive policy, the effects of which are seen in the present complete demoralization.

It has been the opinion that a reorganization of the Reading upon a sound financial basis was a requisite preliminary to any settlement between the contending parties. This has been verified by the fact that as soon as the success of the Reading plan was assured a call for a conference of the anthracite railroad presidents was issued. The call was signed by Messrs. Sloan, of the Lackawanna; Maxwell, of the Jersey Central, and Wilbur, of the Lehigh Valley, the first meeting being fixed for Thursday of the present week.

One of the most significant features of the recent state prevalent in the coal trade was the suspension by the companies of the regular statistics of their production. The reports of the Reading and Lehigh Valley companies for the fiscal year ending November 30 show that those roads increased their output and sales by over half a million tons each, and the other companies have probably followed the same course.

An authority in the coal industry is quoted as saying that since last July there has been no means of knowing exactly how much coal was being mined. It is estimated that the total production for 1895 will figure up nearly 45,000,000 tons. In 1894 the total amount of coal mined was 41,391,200 tons. There is at present an excess of coal in storage, and the side tracks of railroads are filled with loaded coal cars. The output recently has averaged about 5,000,000 tons a month,

while the market will take normally only about 3,500,000 tons a month. One of the conditions of the call was that the representatives of the various companies should bring with them and submit to the conference the statistics of the roads' respective coal tonnage during 1895.

The meeting itself was a full one and entirely harmonious. The assembled presidents and their subordinates came, it seems, at once to a consideration of the real point of the matter—the allotment of percentages. The total production for 1895 was, it seems, no less than 46,500,000 tons, the largest output in the history of the anthracite trade. The necessity for restriction is something that admits of no doubt, but the division of the output is another matter. At any rate, the question was referred to a committee, which is to report next week, and meantime the impression remains that all parties would like to return to a remunerative basis, provided a satisfactory way of arranging the percentages can be devised.

LEHIGH VALLEY'S YEAR.

If arguments could convince the gentlemen who have the principal voice in determining the condition of the anthracite coal trade that a change is necessary in the methods now pursued by the leading corporations in that line of business, it would not be necessary to go further than the reports of the Reading and the Lehigh Valley railroads. It is, indeed, surmised that the facts disclosed by these documents have had much to do with bringing about the conference of the coal railroad presidents held this week. The control of the anthracite properties are now well concentrated in powerful hands. A considerable portion of their securities are, however, held by people who have become accustomed to look upon the leading stocks of this class as pretty safe sources of income. What they now see, however, is eminently calculated to create doubt as to the permanency of dividends. Conditions such as are revealed by the reports for 1895 may be exceptional and altogether temporary. If they were allowed to become permanent, even the most solvent of the anthracite companies would have to succumb. This cannot have failed to strike the average investor in their stocks, and it would seem that the feeling that the managers themselves, by pursuing an obstinate and unharmonious course, have brought the trouble upon the trade is so general and so openly expressed that the managers themselves feel the necessity of doing something to allay the discontent of their constituents.

The Lehigh Valley Railroad Company's report for the year ending November 30, 1895, was issued at the close of last week, too late for review in the last issue of BRADSTREET'S. As already indicated, it is a worthy companion to the Reading companies' showing, corresponding with them, moreover, in point of the period which it covers. The really important part of the report is the frank admission it makes as to the unsatisfactory condition of the coal business, which is the main reliance of the company, and the positive loss which has ensued from the existing demoralization in that trade. The report states that "the hopes of an improved condition in the anthracite coal trade have not yet been realized. On the contrary, the average rate received for transportation of coal was 5.65c. per ton less than in the year 1894, and the coal company (the Lehigh Valley Coal Company, through which organization the railroad corporation's anthracite business is conducted) realized a loss upon the coal mined by it and that purchased from individual operators of 13.48c. per ton." A loss of this character upon such a large tonnage is enormous. The coal produced from the company's own mines was 2,717,005 tons, and that purchased from individual operators 3,217,919 tons, a total of 5,934,917 tons, being an increase of 787,377 over the tonnage of the fiscal year ending November 30, 1894. At the decreased price referred to in the above extract from the report, this made a difference of almost exactly $800,000 in the receipts of the company as compared with what they would have been if the same quantity of coal could have been marketed at normal prices. The showing, in fact, is simply another illustration of an enormous production which, owing to unremunerative competing prices, resulted in a positive loss to the corporation.

The general business of the Lehigh Valley road for the year under consideration was not unfavorable. The gross receipts from miscellaneous freight traffic show an increase of $506,204, and passenger business shows a fair increase. The figures of the earnings statement compare as follows with those of the preceding year:

Year ending Nov. 30.	1895.	1894.	*Changes.*	
Miles operated	1,960	1,921	Inc.	39
Gross earnings	$18,564,454	$17,330,594	Inc.	$1,233,860
Operating expenses	14,028,453	13,320,829	Inc.	708,124
Net earnings	$4,536,001	$4,009,765	Inc.	$526,236
Receipts from investments	990,915	1,036,053	Dec.	45,138
Total income	$5,526,916	$5,045,818	Inc.	$481,098
Interest and other charges	4,884,074	4,918,748	Dec.	34,674
Balance surplus	$642,842	$127,070	Inc.	$554,228

The general financial position of the company has apparently improved, notwithstanding the disappointing results from such a heavy tonnage. The report states that the total tonnage was the largest in the history of the company, exceeding that of 1894 by 2,237,638 tons. Although there was an increase in the tonnage of all classes, there was a decrease in the average freight rate of .08c. per ton, which, upon the total of 2,606,000,000 tons carried one mile each, would have been more than sufficient to pay a dividend of 5 per cent. upon the company's whole capital stock.

ANGLO-AMERICAN BREWING PROPERTIES.

It is not often realized to what a large extent the brewing industries of the United States have passed under the control of foreign, or, to be more exact, of English capital. It is not less than ten years ago that the success attending the conversion of the Bass establishment in England from a private concern to a public stock corporation set the promoters of the London market on a hunt for concerns capable of similar exploitation. Even before the supply of breweries in the United Kingdom had been exhausted it had been discovered that the American brewing industry was one which afforded opportunities for work of that character, and that their owners were in many instances ready to part with control, and at the same time to continue the active direction of their establishments as large stock owners in the companies which had bought out their absolute proprietorship. The fact that there has been, as a rule, no change of name or of working management in the concerns themselves, which, indeed, are operated as American corporations, the stock of which is owned by the English organizations, renders the real circumstances of the cases less prominent. Even in New York city, where the excise question and the relations of the saloons to the law and the police have been a burning question, and where it is known that a large proportion of the saloons are known to be mortgaged or controlled by brewing concerns, some of which are in foreign hands, this phase of the matter has attracted little or no attention.

It is when the English financial journals are inspected that we learn how important a feature of the London market these "Yankee breweries" really are. It has been mentioned in these columns that the concerns in question have not been entirely satisfactory to the British investor. As was very common in the "industrial craze" of a few years ago, the properties were subjected to a process of overvaluation and overcapitalization. The promoters of many of them had little regard in floating them to anything but putting the securities and shares in the best light possible and inducing the public to buy them at as high prices as possible. The natural disappointment has been heightened by the bad times, decreased consumption and competition, which in some localities has been so severe as to deserve the euphonic description of "beer wars." As a consequence, the securities, as a class, have fallen into disfavor in the London market. They, however, represent a considerable investment of British capital, the total of the twelve principal corporations of the class known to the London market being no less than £15,418,000, in bonds and debentures.

The London *Statist*, in a recent issue, gives a review of the condition of these twelve leading Anglo-American brewing organizations, contrasting the profits certified in these respective prospectuses with the actual results. These figures are reproduced below.

Commenting on these results, the same newspaper observes, in the article from which the table below is extracted: "During the greater part of the year 1895 the transfers have been chiefly, it might be said almost exclusively, made by original owners, underwriters and other persons interested in the promotion. In some instances these sales have been made shortly before unfavorable news was let out, and it has been noteworthy with respect to certain companies that these sales have been coincident with the circulation of inspired paragraphs strongly recommending the public to buy."

shares of the Anglo-American brewery companies received little attention. There are, indeed, comparatively speaking, very few transfers of shares actually made in any brewery companies, English or foreign, of which the share lists are registered at Somerset House. Transactions are frequently noted in the Stock Exchange list, and yet the share register at the end of the year does not, perhaps, show half a dozen changes. In American brewery companies

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

CURRENT BUSINESS NEWS.

Industrial.

The coal output of Alabama for 1895 was 6,000,000 tons; coke 1,000,000 tons, an increase of the two combined of about 1,800,000 tons over 1894. Railroads in the state handled during the year over 11,000,000 tons of iron ore, coal, coke, pig iron and limestone.

Chicago coal statistics for the year 1895 show a material increase in the consumption of both hard and soft coal in the city of Chicago, a sharp decrease in the shipments to the country of anthracite, and a much heavier increase in the shipments of bituminous.

Wells, Fargo & Co.'s annual report of the precious metals produced in the states and territories west of the Missouri river, including British Columbia, in 1895, shows an aggregate as follows: Gold, $48,667,383; silver, $35,274,777; copper, $27,052,115, and lead, $7,170,367, making a total of $118,164,642.

The fishing industry in 1895 was not satisfactory, according to the annual report of the Boston Fish Bureau. Prices ruled so low that they barely paid the cost of production. Out of 450 vessels employed in the New England fisheries only some 15 or 20 are reported to have done well, while the remainder did not pay expenses.

An Indianapolis journal mentions that owing to lack of supply of natural gas a number of large coal concerns who went out of business when natural gas was introduced as a fuel have resumed operations, and coal carts are carrying solid fuel about the streets again.

The Denver & Rio Grande Railway Company is reported to have placed an order with the Colorado Fuel & Iron Company for 6,000 tons of steel rails for early spring delivery.

The United States Projectile Company, of Brooklyn, N. Y., have been given a contract for 4,400 semi-armor piercing eight-inch projectiles for the navy, at the price of $27.25 each. The metal used in the manufacture is open-hearth steel, which will be furnished by the Midvale Steel Company, of Philadelphia. The United States Projectile Company are now engaged on an order for 32,000 six-pound shells for the Hotchkiss rapid-fire gun, as well as 3,000 eight-inch shells.

The Midvale Steel Company has received an order from the government for $50,000 worth of shells. The vice-president of the company says that little work had been ordered recently by the government, but the general feeling in governmental circles was, no doubt, moving toward more liberal appropriations for shells and guns.

Commercial.

Alfred B. Shepperson has issued his annual compilation of cotton crops, receipts, exports, stocks, home and foreign consumption, visible supply, prices and acreage for a series of years, in addition to statistics of cotton manufacture. According to this estimate, there were 13,700,000 cotton spindles in the northern mills and 2,400,000 in the southern mills on September 1.

The principal northwestern spring wheat elevator companies held at interior points practically 15,000,000 bushels of wheat on January 1, 1895, and the same lines hold now practically 20,000,000 bushels.

The Minneapolis *Market Record* says that the quantity of wheat in independent houses amounts to some 4,000,000 or 5,000,000 bushels. "But that unknown quantity existed last year and every year, the same as the unknown amount held by farmers."

The Chattanooga *Tradesman* says: "Cotton is steady, with light offerings from first hands. In some sections of the cotton region the crop has been sold out, and in others a good deal of cotton is believed to be held by planters who believe in higher prices. Southern cotton mills are all doing well, are working to their utmost capacity, and find ready markets for their outputs."

An estimate of the crop of oranges in southern California this season by the president of the Southern California Fruit Exchange puts it at 9,000 carloads, or 2,700,000 boxes. This is an increase of about 400,000 boxes over last season.

A Louisville special telegram says that "within the past few days the whisky market has shown signs of decided improvement. It is daily becoming more evident that the 1896 crop will be a small one. A great many of the Kentucky distilleries will not run at all, while with some of the larger ones the production will be curtailed. The prospects of a small crop has had a tendency to stiffen prices, and a better feeling prevails. It is thought that this year's crop will not exceed 15,000,000 gallons."

A Lansing, Mich., telegram, January 24, says: "Articles of association of the Michigan Central Bridge Company were filed with the Secretary of State yesterday, the purpose of the company being to construct a railroad bridge over the Detroit river at Detroit. The company is capitalized at $2,000,000, one-half of the estimated cost of the bridge, which is to be three miles long. The incorporators are Cornelius Vanderbilt, Chauncey M. Depew and C. F. Cox of New York; H. B. Ledyard, Ashley Pond and Henry M. Campbell, of Detroit, each of whom hold ten shares of stock, and the Michigan Central Railroad Company, which owns 19,930 shares."

The "United States Crop Bureau" in its January returns of foreign crops gives the following totals:

CROPS OF GREAT BRITAIN.

	1895.	1894.	*Decreases.*
Wheat	38,348,053	61,037,927	22,689,874
Barley	70,814,823	74,573,807	3,758,984
Oats	125,998,753	139,732,723	13,733,970

THE CROPS OF RUSSIA.

	1895.	1894.	*Decreases.*
Rye	680,276,000	821,534,904	141,258,904
Wheat	239,175,000	282,642,040	43,467,040
Barley	162,879,000	186,718,218	23,839,218
Oats	563,829,000	687,876,308	124,047,308

This indicates a falling off of over one-third in the English wheat crop and over 15 per cent. in the Russian crop. The rye and oats falling off in Russia is enormous.

An exhibition will open May 2 at the Madison Square Garden, New York, consisting of Californian products. The various enterprises and interests of the state will be represented, and in addition there will be miniature working plants of the hydraulic mines, ranches, buildings, sawmills, etc., and models of the parks, universities, public buildings, etc.

A delegation of shipowners from Detroit, Milwaukee, Duluth, Chicago, Cleveland and other lake ports have visited Washington to urge upon Congress the necessity of furthering legislation intended to better the condition of lake marine interests.

What is said to be "the first cork ever grown in the United States, of a size suitable for commercial purposes, was recently stripped from a tree in Augusta, Ga."

An Albany dispatch, January 23, says: "To Prevent Extortion and Combination in Transferring State Grain." So reads the title of a bill which Senator Grady has introduced. "The measure is of great interest to canal men. It was introduced in the assembly also. It provides that the superintendent of public works shall contract for the building of six floating grain elevators equipped with the latest appliances at a price not to exceed $170,000. These are to be operated in connection with the management of the canals by the state. Two elevators are for Buffalo and four for New York. Grain is to be elevated and transferred from lake vessels to canal boats at Buffalo, and from canal boats to ocean ships or storehouses at New York, at a charge not to be more than ¼c. per bushel. The profits are to go toward paying for the elevators"

Financial.

Commenting on gold withdrawals from the United States Treasury, the New York correspondent of the Philadelphia *Ledger* says: "Nominally this gold goes to pay our commercial balances due Europe; actually, however, the gold goes to pay for gold already imported, or to be imported, to pay for the new bonds. That, at any rate, is the way the movement is regarded in the street. It is difficult, of course, to prove the exact connection, as the gold passes through several hands. The banks are furnishing shippers with legal tenders with which to draw gold from the Treasury for export, but will not knowingly be a party to the withdrawal of gold to be sold at a premium to the bullion brokers who advertise that they will sell gold to would-be bond purchasers."

Professor J. Laurence Laughlin, head professor of political economy at the Chicago University, has written a valuable paper for the February *Forum* entitled "Our Monetary Programme," in which he traces the causes, and points out a practical solution, of our financial perplexities.

The total assets of New Jersey building and loan associations for 1895 aggregate a total of $38,882,110. Comparisons show the steady increase of building and loan investments. In 1890 the total in the state was $22,043,892, and the figures for succeeding years are as follows: 1891, $25,606,373; 1892, $29,988,767; 1893, $33,836,487; 1894, $37,339,602. The increase for last year was proportionately small, owing to the effects of the panic of 1893.

As indicating the revival of business last year, the report of the H. B. Claflin Company shows profits for six months in 1895 of $359,273, against $245,434 in 1894. "There was a slight deficit a year ago after the payment of dividends, but now there is a surplus of $273,614."

The following securities were sold at auction this week at New York:

10	Shares Real Estate Exchange and Auction Room, Limited, $100 each	76
10	Shares National Broadway Bank, $25 each	230
100	Shares Illinois Central Railroad Co., $100 each	93⅞
15	Shares Rome, Watertown & Ogdensburg Railroad Company, $100 each	115½
$20,000	Peoria & Pekin Union Railroad Co. 1st mtge 6 per cent. gold bonds, due 1921 (hypothecated)	111½
$30,000	Milwaukee, Lake Shore & Western Railway Company consolidated 1st mortgage 6 per cent. bonds, due 1921 (hypothecated)	129½
$4,000	Texas & New Orleans R. R. Co. of 1874 1st mtge 7 per cent. bonds, due 1905 (hypothecated)	110⅜
$5,000	Pennsylvania Company mortgage 4½ per cent. bonds, due 1921. Guaranteed by Pennsylvania Railroad Company (hypothecated)	109¾
$10,000	Illinois Central R. R. Co. 1st mtge 4 per cent. gold bonds, due 1951 (hypothecated)	106¾
$5,000	Chicago, Milwaukee & St. Paul Railway Company 1st mortgage 5 per cent. gold bonds, due 1921 (hypothecated)	106¾
$30,000	Pittsburgh & Western R. R. Co. 1st mtge 4 per cent. gold bonds, due 1917 (hypothecated)	74½
$10,000	Baltimore & Ohio Railway Co. extended 4 per cent. gold bonds, due 1935 (9 bonds of $1,000 each, 2 bonds of $500 each) (hypothecated)	99½
$5,000	Brooklyn & Montauk R. R. Co. 1st mtge 5 per cent. gold bonds, due 1911 (hypothecated)	101

Montana mines yielded $47,115,000 worth of minerals last year. The copper production of the state was about 65 per cent. of the whole product of the United States. The gold product amounted to $4,100,000, silver to 4,500,000 ounces, copper to 212,000 pounds and lead to 24,500,000 pounds. The gold output was 10 per cent. greater than in the previous year and 47 per cent. greater than in 1893.

It is published that at a meeting of Bessemer mine owners in Cleveland last week to decide on the proportion of ore to be turned out by the various ranges during the coming season, the total amount to be shipped was "fixed at 10,000,000 tons, or 200,000 tons less than was shipped last season. The miners realize that when there is a surplus piled upon the lower lake docks it acts as a price cutter."

The statement is made that the mints will begin to coin silver on February 1 until $18,000,000 worth of the bullion, coinage value, has been minted. The explanation given is that there was $29,000,000 of coined silver in the Treasury when the coinage was stopped in 1894, and that $18,000,000 of that has been paid out in redeeming Treasury notes.

The following are the statistics of population, debt and per capita debt of European countries "who assume to advise this country on matters financial and economic." * * * "There is not a nation among them that can pay its debts," says Henry Clews. "The United States is solvent, the trouble being temporary loss and management."

	Population.	*Debt.*	*Debt per capita.*
Austria-Hungary	41,827,700	$2,866,339,539	$70.84
France	38,218,903	4,446,793,398	116.35
Germany	49,421,964	1,956,217,017	39.58
Great Britain and Ireland	37,880,764	3,330,719,563	87.79
Italy	29,699,785	2,324,826,329	76.06
Russia	113,354,649	3,491,018,674	30.79
Spain	17,550,216	1,251,453,696	73.85
United States	69,000,000	915,962,112	14.63

The Newark *Advertiser* states that there is invested in New Jersey in the shape of building and loan capital and savings banks deposits a total of about $76,000,000, representing an aggregate of about 246,000 individuals. "And this is exclusive entirely of the millions of dollars represented in the thousands of homesteads acquired through the building and loan associations and paid for."

The Ontario Silver Mining Company has declared monthly dividend No. 198 of 10c. per share, payable January 31.

Pullman's Palace Car Company has declared a quarterly dividend of 2 per cent., payable February 15.

The Consolidation Coal Company has declared a dividend of 2 per cent., payable February 1.

The Columbus Street Railway Company has declared a dividend of 1 per cent., payable February 1.

The New York, Chicago & St. Louis Railroad Company has declared a dividend of 5 per cent. on its first preferred stock, payable March 2.

The Tennesee Coal, Iron & Railroad Company reports net earnings for December of $96,739, an increase of $15,739 as compared with the same month of the previous year. Fixed charges were $48,735, leaving a surplus of $48,004, an increase of $26,704. For the year ending December 31 the net earning were $1,008,118, an increase of $346,918 as compared with the previous year. Fixed charges were $595,785, leaving a surplus of $412,333, an increase of $468,533.

The Proctor & Gamble Company has declared a semi-annual dividend of 6 per cent. on its common stock, payable February 15.

The report of the American District Telegraph Company for the year ended December 31, 1895, shows: Gross receipts, $554,956; expenses, including construction, $474,322; net profit, $80,634. The increase in net over 1894 was $12,429.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 77,011 tons, against 74,862 tons the previous week and 45,588 tons the corresponding week of the previous year.

The Chicago & Northwestern Railroad Company reports gross earnings for December of $2,614,786, an increase of $567,940 as compared with the same month of the previous year.

The Chicago Great Western reports for the half year ended December 31:

	1895.	1894.	
Gross	$2,378,385	$1,968,650	Inc. $415,335
Operating expenses	1,672,236	1,462,298	Inc. 209,938
Net	$706,149	$500,752	Inc. $205,398
Charges	612,091	590,071	Inc. 22,020
Surplus	$94,058	Def. $89,319	Inc. $183,377

The Pennsylvania (lines east of Pittsburgh and Erie) reports for December:

	1895.	1894.	1893.
Gross	$5,639,607	$5,153,792	$5,[illegible]825
Operating expenses	3,939,106	3,604,071	3,[illegible]660
Net	$1,700,501	$1,547,721	$1,715,155
Prop. expenses to gross	69⅞	69⅞	67⅞
Gross, 12 months	64,627,170	58,704,276	66,375,223
Net, 12 months	19,682,866	18,340,538	19,379,208

All lines west of Pittsburgh and Erie report for December: Gross earnings increased $425,264, expenses increased $212,901, net earnings increased $212,362. For the year ending December 31: Gross earnings increased $4,591,313, expenses increased $1,821,944, net earnings increased $2,769,369.

Miscellaneous.

The *National Car and Locomotive Builder* has been consolidated with the *American Engineer, Car Builder and Railroad Journal*. It will be published monthly under the editorial supervision of Mr. M. N. Forney, assisted by Mr. Waldo H. Marshall.

The directors of the Philadelphia Maritime Exchange have adopted resolutions urging Congress to enact pending bills for appropriations for coast defenses, the licensing of masters and chief mates of sailing vessels of more than 700 tons registry, and the abolition of compulsory pilotage on coastwise vessels, and to defeat measures "drawn in the interests of seamen alone" and "vexatious and harassing to maritime commerce."

Foreign.

The syndicate which is developing the oil fields in New Zealand consists of capitalists from Sydney and Melbourne. "Many attempts have been made before to reach the petroleum deposit, but the capital was insufficient, although the prospects at those times were very flattering."

The case of the syndicate of shipowners formed in 1894 for the purpose of doing a marine insurance business was before the London Bankruptcy Court on Tuesday. The failure of the syndicate, the gross liabilities of which are placed at £400,000, was ascribed by eight of its members to the prevalence of heavy storms during the winter of 1894 and the consequent large loss of vessels.

United States Consul-General Jernigans, at Shanghai, reports the imports of China from 1890 to 1894 to have increased 27 per cent., and the exports to have increased 45 per cent. in the same period.

The Scotch oil companies are reported to have concluded an agreement to work in conjunction with the American producers.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Corn Crop—Life Tenant.

A life tenant owns and may dispose of a corn crop planted by him a few days before his death upon the land in which he holds a life interest, according to the decision of the Supreme Court of Indiana in the case of Shaffer vs. Stevens.

Foreign Corporation—Action—Domicile.

The Supreme Court of Louisiana held, in the recent case of The State ex rel. Sheriff and Tax Collector vs. Western Union Telegraph Company, that, unless within some exception of the law, a foreign corporation can be sued only at its domicile, declared in accordance with the constitution and laws, but that suits for licenses claimed by the state or parish are not within any such exception.

Creditor—Mortgage—Security.

The Supreme Court of Minnesota held, in the recent case of First National Bank of Hastings vs. Lambert et al., that the principal debtor may be made a party defendant to a suit by his creditor to foreclose a mortgage held as collateral security for the principal debt, and that the complaint is not demurrable on the ground that different causes of action are improperly united, merely because it sets out the collateral note of the mortgagor assigned to the plaintiff, and demands judgment against both the mortgagor and the principal debtor for a deficiency.

Partnership—Mill—Tort—Liability.

The Supreme Court of Louisiana held, in the recent case of Ball vs. Levin et al., that where joint owners of a sawmill plant tortuously and wrongfully entered upon the partnership premises on a Sunday, when the other proprietor was absent, and removed therefrom certain important parts of the machinery essential to the operation of the mill, and carried them away, for the expressed purpose of preventing the latter from operating the mill, and kept them away for more than a month, during which time it was idle, the coproprietor who thus had his rights invaded and was prevented from operating the plant was entitled to actual and punitive damages commensurate with his loss and injury.

Corporation—Firm—Note—Signature.

The Kentucky Court of Appeals held, in the recent case of The National Bank of Cynthiana vs. Mattingly et al., that where the secretary and treasurer of a corporation had been in the habit of signing notes and obligations for the corporation, a note to which he signed the name of the corporation must be treated as the act of the corporation in the absence of any by-law or order designating any person to sign the name of the corporation, and that where a corporation and a firm were for all practical purposes one and the same, and any transaction for the benefit of the firm inured to the benefit of the corporation, a note executed by the corporation for the accommodation of the firm was in fact for the accommodation of the corporation itself, and was binding upon the corporation whether or not a corporation as a general rule has power to execute paper for the accommodation of others, a question which was not decided.

Escaping Gas—Injury to Trees.

A gas company is liable for damages in causing the destruction of shade trees by carelessly permitting gas to escape into the ground from its mains, according to the decision of the New York Court of Appeals in the case of Evans et al. vs. The Keystone Gas Company, reported in the Chicago *Legal News*. The court, in discussing the verdict, said: "It may not be altogether satisfactory, but we cannot say, as matter of law, that the injury to the plaintiff's place was not due to the causes described. The evidence was conflicting upon that question, as it was upon the condition of defendant's pipes, and permitted of opposing inferences by the jury. Their verdict cannot be said to rest upon mere surmise, for they had facts testified to which, if they believed, would account for plaintiff's loss of his trees as he charged it to be. If we could see that the verdict could only have been reached by conjecture we should not hesitate to reverse the judgment upon the exception of defendant to the refusal to direct a verdict in its favor. The evidence rises to a higher level than that of speculation. The coincidence of the delay and death of vegetation with the existence of the leakage of a large amount of gas, after the laying of the new main and until its recalking, and that the fact of a healthful growth after the recalking, could be regarded by the jury, in view of all the evidence, as leading to the conclusion that the effect of the natural gas escaping in the earth and in the atmosphere was to cause the occurrences complained of. Doubtless, the defendant was lawfully in the street, but it was bound to use its rights and to conduct its operations so as not to inflict injury upon neighboring property. If we admit the possibility of an inference from the evidence that the injury to plaintiff's property was from the causes alleged, there is no difficulty in sustaining the recovery upon the principle of law above alluded to."

Married Women—Kentucky Law.

In Kentucky, according to a recent decision of the Court of Appeals of the state, a married woman may set apart her real property by deed of mortgage to secure the debt of her husband. The case was that of Sanders vs. Miller et al., and was brought upon a note and mortgage executed since the act of March 15, 1894, which fixed the property rights of husband and wife. After quoting previous statutes and the judicial construction thereof, the court said: "But the intent and policy of the new statute seems to be much broader than this construction. Section 2127 provides, immediately following the provision quoted above, 'no part of a married woman's estate shall be subjected to the payment or satisfaction of any liability, upon a contract made after marriage, to answer for the debt, default or misdoing of another, including her husband, unless such estate shall have been set apart for that purpose by deed of mortgage or other conveyance, but her estate shall be liable for her debts and responsibilities contracted or incurred before marriage, and for such contract after marriage, except as in this act provided.' The setting apart provided for in this section clearly refers to a setting apart by the wife by the execution of a deed of mortgage or other conveyance, and the latter part of the section distinctly provides that 'her estate shall be liable * * * for such (debts and responsibilities) contracted after marriage, except as in this act provided'; that is to say, except the classes of contracts prohibited by section 2127 and 2128. This conclusion is strengthened by the language of section 2128: 'A married woman may take, acquire and hold property, real and personal, by gift, devise or descent, or by purchase, and she may, in her own name, as if she were unmarried, sell and dispose of her personal property. She may make contracts, and sue and be sued as a single woman, except that she may not make any executory contracts to sell or convey or mortgage her real estate, unless her husband join in such contract.'"

Municipality—Ordinance—Railroad.

The Supreme Court of Minnesota held, in the recent case of The City of St. Paul vs. Chicago, Milwaukee & St. Paul Railway, that a municipal corporation has no proprietary rights in the streets, levees or other public grounds within its territorial limits; whatever rights it has in them it holds merely in trust for the public; that a municipality has no authority over such public grounds except such as are delegated to it by the legislature; that the "care, supervision and control" of all public highways, streets, etc., within the city limits given to the common council of the city of St. Paul by the city charter did not authorize the council to grant to a railway company the right to construct and maintain a freight house on a "public levee," for its own exclusive use; that section 11 of the same subchapter providing that "the common council shall have power and authority * * * to grant the right of way upon, over and through any of the public streets, highways, alleys, public grounds or levees of said city to any steam or horse railway company or corporation upon such limitations or conditions as they may prescribe by ordinance," only authorized the common council to grant the right of trackage; that is, the right to construct and operate railroad tracks on and over the public grounds within the city, but not to occupy and use such grounds as a site for depots, freight houses or other buildings, and that the section of the general statutes providing that "if it becomes necessary in the location of any part of a railroad to occupy any road, street, alley or public way, or any part thereof, it shall be competent for the municipal * * * or other public authorities owning or having charge thereof, and the railroad company to agree upon the manner and upon the terms and conditions upon which the same may be used or occupied," only authorized municipal or other public authorities to agree or arrange with a railroad company as to the manner or terms upon which it may occupy public streets or ways with its railroad tracks, but does not authorize them to grant to the railroad company the right to occupy them as sites for its depots, freight houses or other like structures.

BUSINESS NOTES.

Canadian Post Office Report.

The annual report of the Canadian Postmaster-General shows that letters posted in Canada last year reached a total of 110,500,000, postal cards 24,800,000, and newspaper and book packages 23,000,000. The post offices in the Dominion number 8,832, an increase of 188.

Increase in the World's Gold Money.

The *Engineering and Mining Journal* says: "It should be remembered that of the world's production of gold during four hundred years only about 25 per cent. went to increase the money of the world. Three-quarters of the whole gold production went into industry or to make up losses on the existing stock of gold. When the production is unusually rapid a larger proportion goes to increase the stock of money than when the output increases but little. If the world's output of gold in 1895 was $203,000,000, it would not be safe to count that the world's stock of gold money was increased by more than $50,000,000 to $60,000,000."

Lake Superior Iron Ore Production.

In the supplement accompanying the *Iron Trade Review* are presented complete tables showing the shipments from Lake Superior iron mines in 1895. "There is also given the output of the various properties from their first year of shipment. The grand total is 97,556,866 gross tons, or practically 100,000,000 of tons of ore, since the opening of the first iron mine on Lake Superior. For the first time the total from all ranges passes 10,000,000 tons, and at this rate less than ten years would be required for the taking out of as much ore as has been shipped in the forty years of upper lake iron mining."

Steel Canal Boats on the Erie Canal.

The Cleveland, Ohio, Steel Canal Boat Company, whose experimental fleet of steel canal boats aroused "interest in their trial trips on the Erie Canal and Lake Erie last fall, has let the contract for thirteen additional boats, three of which are to be steamers, thus giving them a fleet of four steamers and fifteen consorts. The new steamers are to be more powerful than the first one, which needed a tug on Lake Erie, and the consorts will be built with a view to utilizing the increased depth of the Erie Canal. The company was greatly encouraged with the result of its last fall's experiment, as it has hitherto been thought impracticable to build boats suitable for both lake and canal service."

Trade with Servia.

At a recent meeting of the London Chamber of Commerce the minister for Servia delivered an address on the trade between Great Britain and that country. "The value of the cattle and pigs exported is about £800,000 per year, and they receive about the same sum for their wheat and Indian corn. Dried plums are exported to an annual value of £400,000, but their direct export to England is almost nil. The Servians are now making efforts to bring British buyers of dried plums into direct relations with the Servian producers, in order to save the commission usually paid to the Buda-Pesth or Vienna agents. The Servian direct imports from England do not exceed more than £200,000 per year."

British Commerce in South America.

An exchange states that "sooner or later most of the countries of Central and South America would become involved if there were a war between England and Venezuela. The following table gives recent figures showing the extent of commerce between these and Great Britain:

	Great Britain—	
	Imports into.	*Exp'ts from.*
Mexico	$2,773,730	$6,623,320
Central America	4,743,675	5,122,430
Colombia	2,847,060	5,101,420
Venezuela	726,060	3,436,315
Ecuador	1,167,395	1,394,720
Peru	5,254,745	3,049,130
Brazil	19,700,345	59,152,850
Uruguay	1,335,505	7,634,405
Argentine Republic	30,843,120	23,166,575
Hayti and St. Domingo	405,360	1,746,305
Totals	$69,796,995	$96,407,450

Street Railway Operation.

An interesting comparison of the cost of operating street railways by different forms of motive power is given in the report of the Chicago City Railway Company, "which has 162 miles of lines in the south division of the city—namely, horse-car, 9 miles; cable, 34 miles; electric, 117 miles. The cost of operation for each car mile in the last two years was as follows:

	Cents—	
	1895.	1894.
Cable lines	10,240	9,972
Horse-car lines	30,550	25,393
Electric lines	14,776	16,904
All lines	12,796	13,487

"The relatively high and increasing cost of operating horse-car lines is doubtless due largely to the small mileage and light traffic of the roads of this kind now remaining. The decrease in cost of electric lines is noticeable, although with far greater mileage they are still much more expensive to operate than the cable roads."

English Cotton Spinners' Year.

The results of the past year's working of ninety-eight cotton spinning companies in Oldham, Ashton-under-Tyne and Rochdale districts are as follows:

	Spindles.	*Profit.*	*Loss.*
Oldham (73)	5,211,326	£67,887	£32,777
Ashton (9)	743,202	8,136	1,824
Rochdale (16)	1,354,125	32,154	8,447
Companies, 98	7,308,653	£108,177	£43,048

"The dividends of these companies, where any were made, ranged all the way from one-half of 1 per cent. to 10. Fifty-six companies paid nothing. This is certainly a very unfavorable showing, and very discouraging for the stockholders. It is not an easy matter to institute a comparison of these mills with those in this country, as they are all spinning mills making yarns for others to weave into cloth, while our mills are mostly engaged in the manufacture of cotton from the bale to the case, making all the profits there are in the various operations of converting it into cloth."

Tea in the Transcaucasus.

The British consular report on the agriculture of the district of Batum contains some interesting remarks concerning the cultivation of tea along the southeastern corner of the Black sea littoral. "The experiments made during the last few years appear to have disclosed certain conditions which promise a great future for the industry. A number of proprietors have acquired land for planting, among them the Imperial Domains Department, which has in addition sent a special expedition of inquiry to tea-growing countries. This expedition has already completed its tour through India, China and Japan. In China it procured seeds and plants and machinery, as well as staying an entire month in a village near Shanghai to study the preparation of tea. In Japan, likewise, the expedition collected samples of tea plants and seedings, and it is intended to engage Japanese laborers. Some of the members of the expedition are studying the American system of culture near San Francisco."

Consumption of Lumber.

The *Northwestern Lumberman* says: "There is no other country in which forest products are so lavishly used as in the United States. On the other hand, no other country was originally so well supplied with forest growth. The census returns show that the per capita consumption of lumber in this country has increased for every decade since 1860 at the rate of from 20 to 25 per cent, The United States consumes of forest products for each inhabitant double that consumed in Russia, ten times that of Great Britain, four times that of France, five times that of Germany, and eight times that of Italy. Never mind what our forest resources are, we are using them up at so rapid a rate that the next generation will find heavy forest growth as scarce in the United States as in Europe, and commanding fully as high a price. The consumption of saw logs and pulp wood is far ahead of their growth, though cord wood and sprout growth are increasing faster than the cutting demand."

Outlook for Cattle and Beef.

The *National Provisioner* says: "With the decreasing demand for poultry, and the thereby increased demand for beef, it would not at all be surprising to us to see the price for the latter commodity somewhat higher in the near future. We believe that the low cattle and beef prices are to a larger extent due to sympathetic influences than to heavy supplies, since the quantity of cattle received at the principal packing centers is not by any means very large or much in excess of that disposed of in normal years. We do not agree with some of our contemporaries, representing the interests of the farmers, who believe that there will be a shortage, but a better demand, now that the holidays are over, and a consequent stiffening of prices can, in our opinion, be safely looked for, the more so since there does not seem to be any prospect for very heavy supplies in corn-fed cattle, in spite of the fact that there is more corn to feed them with than there has been for many years. This is probably due to the fact that while the prices for beef are low or reasonable, those for feeders are comparatively high. Better prices in the market for beef would certainly induce the farmers to hold their cattle for higher prices, and that would probably bring out a better class of beeves than have been in the market of late. In other words, we foresee higher prices for the better grades."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

Showing Stock Outstanding, Bonds, Mileage, Last Dividends and Total Sales, with Range of Prices in 1895 and 1896.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

An analysis of special telegrams to BRADSTREET'S from the more important business centers throughout the country shows considerable irregularity in trade, the most favorable feature being the tendency of staple prices to advance. The late drop in iron and steel prices was one of the shortest on record. Restriction of production of pig iron and advances for 1896 delivery of prices of coke and lake ore prove sufficient stimulus to push quotations for Bessemer pig and steel billets up $1 @ $2 a ton at western centers. The impression prevails that these prices are likely to be maintained.

The advance of 3c. in wheat again raises the question whether the beginning of the end of the long period of depression of cereal prices has come. Supplies of wheat for leading importing markets are now controlled by Russia and the United States. India's, as well as Argentina's, ability to ship is much restricted compared with previous years, and Australia left the list of exporters when she began to import wheat from San Francisco recently. Domestic wheat stocks are larger than earlier official and trade estimates of it, but the export demand has increased so far beyond what was anticipated, and gives so much promise of being continued, that the bulls in the speculative markets are counting on higher prices.

In addition to the foregoing, prices have advanced for wheat flour, Indian corn and for oats, largely in sympathy with wheat, and the upward movement of quotations for pork still continues. Scarcity of Cuban sugar and promise of a large demand for European supplies appear behind the advance in sugar, while higher prices for cotton are based on a better export demand, less warlike indications abroad, and the impression that the size of the domestic crop has been overestimated in some instances. While domestic wools are unchanged in price, foreign wools are held 5 per cent. higher, owing to the demand for them abroad. Print cloths are firm and unchanged, as are quotations for lumber, lard and for coffee. Leather, petroleum and copper are conspicuous for lower prices.

The falling off of 71 business failures in the number reported from the United States this week, the total being only 341 compared with 412 last week, is somewhat unexpected, but no less favorable, for, compared with the total one year ago, 312, the contrast is less marked. In the corresponding week in 1894 there were 338 failures, 3 more than this week, and in the like week of 1893, at a period when business was of large volume and considered prosperous, the total was 302.

Stock speculation at New York is limited in both activity and the quantity of the trading. Sentiment, however, has improved on the better international outlook here and abroad and the decrease of apprehensions about the money market. The fear of disturbance in the latter quarter as the result of subscriptions for the new government bonds has been greatly modified, and time money is offered more freely. London has inclined to buy stocks, and short covering has helped the advance. The stock market is, however, narrow and professional. Foreign exchange is dull and less firm at 4.88¾ @ 4.89. Gold shipments for the week are $2,500,000. No gold exports are announced by Saturday's steamers. Gold imports for bond subscription purposes were $1,150,000. The premium of ⅜ @ ⅝ for gold or legal tenders for use in the same connection is still quoted, but transactions are less important. It seems that bidders for the new bonds have generally completed their arrangements.

Total exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,849,000 bushels, as compared with 3,202,000 bushels last week, 2,840,000 bushels in the week one year ago, 2,947,000 bushels two years ago, 2,531,000 bushels in the corresponding week of 1893, and as contrasted with 3,557,000 bushels in the like week in 1892. Exports of Indian corn aggregate 3,192,000 bushels this week, a slight decrease from the week before, but more than four times the quantity sent abroad in the corresponding week one year ago, nearly twice the amount exported in the week two years ago, four times that sent out of the country in the like week in 1893, and about 600,000 bushels less than in the corresponding week in 1892. New Orleans alone exported 1,117,000 bushels of Indian corn this week, more than one-third of the total quantity sent abroad from the United States.

On the Pacific coast, Tacoma reports the price of wheat relatively higher than at Chicago, owing to the demand from South Africa, whence also come orders for lumber. There is interest attaching to the announcement that ten carloads of Mobile cotton are at Tacoma awaiting shipment to Yokohama. The volume of general trade has increased at Seattle, and business is fairly active at San Francisco, where stocks of wool are low.

The comparatively unfavorable business features are the somewhat disappointing character of the opening of spring trade in leading staple lines and small totals of bank clearings, registering the reaction in trade which showed itself more than a month ago.

Total bank clearings throughout the United States amount to $980,000,000 this week, a decrease of 8 per cent. from the preceding week, but an increase of nearly 7 per cent. as compared with the corresponding week in January last year. When contrasted with the like total in 1894, this week's aggregate shows an increase of 16 per cent., but when compared with the corresponding week of 1893 (when the volume of business was heavy, prior to the panic), this week's falling off is fully 30 per cent., and as compared with the like week in 1892, this week's decrease is 19 per cent.

At such centers as Chicago and St. Louis reports are made that interior merchants, have been disappointed in the season's business, and are buying somewhat more sparingly than expected, although many jobbers at those cities report that travelers for clothing, dry goods, shoe and hardware houses are taking fair orders for spring delivery. Most favorable reports regarding the movement of merchandise, present and prospective, are from Baltimore, where orders are being received freely and prospects for spring trade are bright; from Buffalo, where the money market is reported more active than for two years past, and from Charleston, where almost all leading jobbers report an improvement in business. The increased activity in leading money markets is noticeable at Providence and Boston, where commercial paper is being more closely scanned. At larger western centers money is easier, with lower rates for exchange on New York.

There is a rather better movement of spring goods at Toronto, notably of dry goods. Trade conditions at Montreal are less favorable than a year ago, and there are more failures in business now than then. The unseasonable weather is a special cause of the depression in business in the Dominion. Failures of jobbers in shoes in the west have resulted in losses to Quebec city manufacturers. Halifax reports stocks of produce throughout Nova Scotia large, but prices low, and country roads still bad for want of snow. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $19,667,000 this week, against $21,000,000 last week, and as compared with $18,400,000 in the week one year ago and with $17,000,000 two years ago. There are 52 business failures reported from the Canadian Dominion this week against 74 last week, thus indicating a large falling off. But when contrasts are made with like weeks in preceding years, the 52 this week is seen to be an unusually large number. One year ago the total was 38; it was 48 in each of the corresponding weeks in 1894 and in 1893, and 44 in 1892.

FINANCIAL.

The Money Market.

Easier rates and decreased apprehensions of stringency growing out of the bond subscription have characterized the New York loan market this week. The conservatism of lenders has been modified accordingly, and offerings of time-loan money, as well as the purchasing of commercial paper, have increased considerably. Rates, however, hold firm, 6 per cent. being asked for time loans of all dates, and commercial paper cannot be quoted at less than 6@7 per cent. for best double names. Call money has been plentiful at 2½ @ 5 per cent., the bulk of the week's business on the Stock Exchange being done at 3½ @ 4 per cent.

The New York Banks.

Again does the statement of averages, published last Saturday, indicate a further increase of cash holdings by the banks in anticipation of the bond subscription. The increase in specie was $2,200,000, while legal tenders increased $3,181,000, in spite of the withdrawal of greenbacks for gold-export purposes. There was a further decrease of $4,250,000 in loans and an increase of $1,135,000 in deposits, the former of these changes being in keeping with the change in cash holdings. The result of the other increases and decreases is an augmentation of the surplus reserve by $5,162,000. The figures of the statement compare as follows with those of the preceding week:

	Jan. 11.	Jan. 18.	Changes.	
Loans	$458,208,400	$453,958,200	Dec.	$4,250,200
Specie	71,346,200	73,610,500	Inc.	2,264,300
Legal tenders	78,054,100	81,836,000	Inc.	3,181,900
Deposits	491,258,800	492,403,800	Inc.	1,135,000
Circulation	14,062,600	13,923,400	Dec.	79,200
Total reserve	150,000,300	155,440,500	Inc.	5,440,200
Reserve required	122,817,200	123,100,950	Inc.	283,750
Surplus reserve	27,183,100	32,345,550	Inc.	5,162,450

At the corresponding period last year the surplus reserve was $45,065,075, against $102,754,450 in 1894.

The Boston Banks.

Surplus reserve	2,734,571	2,881,171	Dec. 146,600

Silver.

The market has been dull, firm and featureless. Prices are well held, with only fractional changes from day to day. The recent buying demand has not continued.

SILVER PRICES.

New York	67¼c.	67¼c.	67¼c.	67c.	67⅛c.	67⅛c.

Foreign Exchange.

Transactions in exchange have been on a more restricted scale. The supply of commercial bills is limited and the inquiry for remittances irregular. Parties who are importing gold for bond-subscription purposes are said to be purchasers of bills. While there has been some foreign buying in the stock market, particularly on Wednesday last, it had little or no effect on rates. The market, however, was of a changeable character, as is shown by the advances of posted quotations ½c. for both long and short—to 4.88½@4.90—on Monday, then reduction to 4.88@4.89½ on Wednesday, and the marking up of the nominal figures for 60-day bills to 4.88½ on Thursday. Actual business for bankers' sight bills showed considerable variation within limits fractionally above or below 4.89. The gold shipments for Wednesday were $2,500,000 in amount, but on that day the market became so dull and heavy, demand selling as low as 4.88¾, that doubt was felt as to whether any considerable amounts of specie would be taken for export to-day. The market, however, was weak on Friday, and no gold engagements were made for shipment by Saturday's steamer. The gold imports of the week were $1,150,000.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.89¼@4.89½; commercial bills, 4.86¾@4.87; francs, 5.17½@5.15⅝; reichsmarks, 95 1/16@95 11/16.

The Bank of England rate remains unchanged at 2 per cent. The bank this week gained £1,643,000 in specie. Its proportion of reserve rose to 62.52 per cent., against 60.90 per cent. last week. In the London open market call money has been easy at ½ per cent. and discount at 1 1/16 per cent.

The exports of general merchandise from New York to foreign ports for the week ending January 21 were valued at $8,076,167, against $9,508,642 last week and $9,788,484 for the corresponding week of last year.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending January 17, 1896:

	1896.	1895.
Dry goods	$3,031,083	$4,009,966
General merchandise	6,298,156	7,860,280
Total for the week	$9,330,139	$11,870,246
Previously reported	21,836,095	19,146,176
Since January 1	$31,168,234	$31,016,422

THE STOCK MARKETS.

The New York Stock Market.

Decidedly less consideration was given to the condition of the government bond issue this week. It is assumed that it will be somewhat oversubscribed, though the prevalent opinion is that the bulk of the loan will be taken by the same interests which formed the defunct Morgan syndicate, and that "public" subscriptions, so called, will be scattering and relatively unimportant. The most significant feature in this connection is the evidence afforded that the larger interests among the presumable subscribers have already prepared themselves, thus decreasing the pressure to obtain gold or greenbacks and visibly easing the strain upon the money market. Gold and legal tenders still command a premium of ⅜@½ per cent., but the inquiry has slackened and transactions are on a smaller scale. The effort to accumulate legal tenders suggests, of course, that some of the bidders are shaping their arrangements with a view to obtaining their gold with which to make payment for bonds from the Treasury itself. In the face of conditions in the exchange market which induced the export of $2,500,000 gold to Europe, all of which was withdrawn from the United States Treasury, about $1,150,000 specie has come from London, and other amounts are said to be on the way. It is evident that these transactions involve the purchase of bills of exchange and produces the pressure on the exchange market to which the current gold exports are due. To this extent, therefore, the preparations for the subscription are a positive loss to the Treasury gold reserve, which, at the end of the week, is reduced to only $50,400,000.

The principal speculative factor of the week has been, however, the easier tone of the money market. The fact that the pressure of preparation to bid for the bonds has decreased is supplemented by indications that the Treasury may go even further than its circular of January 15, extending the time for payments for the new bonds, in making concessions and obviating any disturbance of the loan market. This has shaken the general belief that there might be a stringency and a period of high rates, and time money has, consequently, been more freely offered, while mercantile paper is once more discountable with some ease. The unlocking of funds has, in fact, been general, and has naturally affected the temper of speculation. Equally important was the improvement in the political outlook, both here and abroad. The action of the Senate Committee on Foreign Relations in reporting a resolution pushing the Monroe doctrine to an extreme limit created some misgivings as to its effects on the Venezuela controversy. This, however, disappeared. Attention was also paid to the possibility of recognition of the Cuban revolutionary government, but this, too, died away, and at the close of the week the prevalent feeling in the street is that the danger of any acute foreign complications is very remote.

The political situation of Europe has also calmed down. The destination of the English "flying squadron" was the subject of some canards of a disturbing character, and later in the week the report of a Russo-Turkish alliance was the cause of a slight unsettling of the London market. The improvement of the London market would, however, indicate improvement in the foreign political outlook, and one of its effects was to create foreign buying of securities in this market, the purchases from this source on Wednesday reaching a very respectable aggregate.

Speculation has continued to be very narrow, and transactions represent almost exclusively professional activity. The larger interests have been quiet, except that in some few stocks, like Sugar, Chicago Gas and Manhattan, there are signs of inside manipulation. The general tendency of the market, however, represents a change sentiment from gloom and apprehension to increased hopefulness. The existence of a short interest supplied the absence of buying power, and the general list has consequently improved all around, the market being especially strong at the close on Friday.

The most important event of the week was the meeting of the coal road representatives on Thursday. The fact that production of anthracite in 1895 reached the enormous amount of 46,500,000 tons demonstrates the demoralization of the trade and the necessity of restricting the output to figures nearer the consumptive demand. The meeting was not immediately productive of results. The vital point in the situation is its distribution in a way to satisfy the Reading's demand for an increase and yet not to take too much from other roads. A committee was appointed to suggest a plan and report on next Thursday. Delay seems inevitable, but the belief is that some form of harmony and restriction will be finally arrived at. Reading securities were firm and higher on the idea that its claim for an allotment of 21 per cent. of the output will be substantially secured.

Chicago Gas has been heavy on the news of an attempt by the reorganizers to test the right to consolidate the companies. Further litigation seems inevitable. Western Union has been the object of continued pressure. General Electric improved on renewed rumors of better relations with the company's competitors. London buying is responsible for the better quotations in St. Paul and international stock. Sugar was active and had inside support, the price being advanced whenever the condition of the general market appeared to warrant manipulation for that purpose.

Boston Stock Market.

[Special to BRADSTREET'S.]

The general movement in stocks continues moderate and values have weakened further. Atchison closes quiet and a trifle lower, with Chicago, Burlington & Quincy ¾ lower. Mining stocks are also depressed, Boston & Montana closing over 3 points lower, with Butte & Boston ¾ of a point below last week's price. Sugar has ruled steady, with a firmer tone and more activity at the close. United States Leather preferred shows a loss in value of 1½ points for the week.

Prices of principal shares, with volume of transactions, have been as follows:

SPRING TRADE GROWING.

IMPROVEMENT IN IRON AND STEEL AND FEWER FAILURES IN BUSINESS, FEATURES OF THE WEEK.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, January 24.—In most departments of the merchandise market trade is in moderate volume. The stringent money market undoubtedly affects business in general unfavorably, and the feeling is that money loaners will feel timid until the bond loan is out of the way. The tone of the money market is rather easier at the close, with call at 6@8 per cent., while four months' collateral loans have been at 7 per cent. Commercial paper is quiet, with little offering, and the rate quoted at 6@9 per per cent. The boot and shoe market continues quiet, with jobbers ordering conservatively, and general trade dragging. Leather sells slowly and values are rather weaker than otherwise. Hides are meeting with a slow demand from eastern tanners, and buffs are ¼c. lower. A line of 100,000 Central and South American hides, out of store in New York, was bought by an eastern hemlock sole leather tanner this week. Iron and steel are firmer and the outlook is stronger. Lumber is steady, with spruce scarce. Coal is quiet.

Providence, January 24.—There is no improvement in general business. Cotton and woolen manufacturers, dealers in heavy hardware, groceries, drugs, etc., find sales slow. Collections are dull and commercial paper is closely scanned. The gold reserve in Providence banks is reported to amount to $700,000.

Philadelphia, January 24.—The wool market continues stagnant, but an increasing demand for dry goods is noted, with a fair outlook. Leather and glazed kid are still unsettled, attributed to recent failures, and prices have a downward tendency. The market for finer grades of skins is at a standstill. Boots and shoes somewhat more active through an increase in out-of-town orders. Paper is fairly active for cheaper grades. Produce and provisions are in fair demand. There is slight increase on some of the finer grades of refined sugars. Collections are generally slow.

Pittsburgh, January 24.—Few changes are noted in local trade other than a small increase in the volume of business. Prices of all staples are maintained, and indications are for a large spring business. The iron market has continued dull, although prices are reported a little higher on two or three different lines, and several more furnaces are reported to have shut down, and for the present, at least, prices, it is believed, will not go any lower.

Buffalo, January 24.—General trade conditions have not changed; business is still quiet. Collections in some lines are fair, while others complain bitterly. The demand for money has been more active since the beginning of the year than at any other time for the past two years.

Baltimore, January 24.—Trade is improving; orders are coming in freely, and indications are favorable for a good spring trade. This is anticipated by merchants, who are buying accordingly. Collections are good for the season.

West and Northwest.

Cleveland, January 24.—There is some improvement in iron market conditions. In general merchandise trade the usual quiet of January is the principal feature. Country collections are fair and the spring trade outlook thought reasonably favorable.

Detroit, January 24.—Manufacturers are fairly busy. The movement of general merchandise is, however, quiet, and collections continue slow and unsatisfactory.

Chicago, January 24.—There has been no increase in the trade during the week. The majority of the interior dealers have not had the business they expected, and are not disposed to buy except as they have to. This also has a tendency to restrict the buying of spring goods, but jobbers report that traveling men are securing fair orders for dry goods, clothing, shoes and hardware. There is a good call for russet leather and prices are well maintained, but, generally, trade with tanners is slow. Bar iron holds firm, and others are up to expectations. The calls for pig iron and steel do not increase as fast as manufacturers would like, but they are not granting concessions. The South Chicago works will reopen January 27. The produce trade is slow, and butter is lower, with increasing stocks. Wool receipts, 87,791 pounds. Collections fair.

Louisville, January 24.—Jobbing trade conditions have not improved appreciably. General business is quiet. Collections are fair. Leaf tobacco is active; offerings large, but mostly of lower grades. Prices as a rule are satisfactory.

St. Louis, January 24.—With but few exceptions general trade is slow. Dry goods, boots and shoes are in increased demand, but manufacturers of the latter are buying the raw material only as needed and cannot be induced to experiment. The leather market is unsatisfactory, Some dealers are authorized to make concessions on sales of consequence, but deals on this basis are not generally known. Transactions in lumber are satisfactory for the season and at better values than last year. Pig iron and iron and steel show improvement in sales but not prices. The movement of groceries and provisions is only fair. Collections are fair.

Kansas City, January 24.—Jobbers report improvement, with prospect for better trade. Collections are fair. Live stock receipts liberal, with better prices.

Milwaukee, January 24.—Trade continues quiet, though a slight improvement is reported in some staple lines. Collections are a little slow.

St. Paul, January 24.—Spring orders are beginning to come in a little more freely, and from now on trade will be more active. Prospects are fair. Collections not entirely satisfactory. January inventories of St. Paul jobbers, which are now coming in, show gains both in volume of sales and profits over the year 1894.

Minneapolis, January 24.—Trade conditions unchanged from last week. Outlook for spring trade is believed to be fair.

Duluth, January 24.—Condition of trade unchanged. Weather is unseasonable and trade light. Extensive and active preparations are being made by carrying trade for coming season, which promises well. Financial circles quiet.

Omaha, January 24.—The leading jobbers report trade very quiet and collections poor.

Sioux Falls, January 24.—Trade is irregular in all lines. Retail trade quiet.

Southern Cities.

Charleston, January 24.—Wholesale trade report business improving in all lines. Retail trade quiet.

Savannah, January 24.—General trade and collections for the week are fair. Receipts and shipments of spirits and turpentine light. Tone of both markets quiet.

Atlanta, January 24.—Trade is good in all wholesale lines; retail trade dull on account of rainy weather. Collections fair.

Augusta, January 24.—General business situation is unchanged from last week. Fair orders are received from country merchants. Collections are not satisfactory.

Jacksonville, January 24.—Trade and collections for the week are fair.

Birmingham, January 24.—General business is improving slowly. Collections are fair.

Chattanooga, January 24.—Opening of spring trade and prospects satisfactory. Collections for the past week are better than earlier in the month.

Nashville, January 24.—Trade continues quiet. Country collections fair; city collections tardy among retail trade. Money market and local stock markets continue as last week. Money is apt to continue close till after bond issue.

Memphis, January 24.—General trade is fair, especially in boots, shoes and dry goods. Collections fair.

New Orleans, January 24.—Jobbing trade is below the average at this season, but the outlook is more promising. There is a better demand for cotton. Heavy export movement of bulk corn. Sugar is quiet but firm. Rice is less active.

Galveston, January 24.—Jobbers in groceries and clothing report a fair demand. Other lines dull.

Pacific Coast.

San Francisco, January 24.—Commercial lines fairly active. Prices steady. Produce dull. Wheat for shipment active and higher. Wool stocks running short. Wheat freights lower—£1 2s. 6d. Total tonnage in port 105,000, of which 52,600 tons are engaged. Collections very slow.

Portland, January 24.—The special feature of the retail trade is the low prices at which nearly all classes of merchandise are being sold. General produce, too, is not commanding a good price. Collections are fair.

Tacoma, January 24.—No new features in jobbing circles. Wheat quoted higher here than in Chicago, owing to growing export trade in wheat and flour to South Africa. African lumber orders are increasing. Ten carloads of cotton from Mobile are awaiting next steamer for Yokohama.

Seattle, January 24.—Business has been much better this week in general lines. Collections a little slow.

Canada.

Toronto, January 24.—Trade in dry goods is said to be a little better, with an increased movement in spring goods. Sugars are ⅛ to ¼ higher, and hardware is quiet.

Montreal, January 24.—The week has not developed any noteworthy changes in trade conditions. Collections are reported not as good as last year, and there have been more failures since the opening of the year than usual. The unusually open weather has depressed general business, and orders for spring goods are reported light. Jobbers are using more than ordinary care in filling orders. Several Quebec shoe manufacturers have met losses by the failure of shoe jobbers in the west, and the year has not opened bright in the shoe and leather trade.

Halifax, January 24.—Trade is fairly good for this season of the year. Country collections about up to the average. Produce stocks are large; the demand is very light and prices rule low. Roads in the country are still bad for want of snow.

Dry Goods.

[Special to BRADSTREET'S.]

The market shows a fair business in jobbing departments, and in this respect the season is opening well. Cotton fabrics are slow with agents, although values maintain a steady tone. The feeling on the part of manufacturers that cotton will maintain its present value is growing stronger, hence they are not disposed to cut the price of goods. Buyers are holding back in an attempt to force a break in values for goods, which makes business slow. Manufacturers claim that the goods at present asking prices are below the parity of the cost of raw material. Printed fabrics are opening well and going steadily. Dress woolens are meeting with moderate reorder purchases, but trade with mill agents is quiet. Jobbers are meeting with a good business, mohairs being very attractive, as well as silk plaids. Trade in men's-wear woolens is quiet, with purchases confined to small lots, which makes business drag. Overcoatings are quiet.

Wool.

[Special to BRADSTREET'S.]

The strong tone and further advance in prices at the London wool sale tend to keep values firm on this side of the water, but domestic wools sell slow. Australian wool is firmer, and the Boston sale of this wool the past week was in excess of 2,300,000 pounds, one large manufacturer buying 1,000,000 pounds. While the London price shows a further advance of 5 per cent. over opening rates and 10 per cent. over the close in November for the choicer grades of merinos, selling prices here are not much higher than a week ago, the present difference being that buyers will now operate. Domestic fleece wools are held steady, but move slow. Territory wools are dull, and, while the cheapest on the line, they attract no present attention. Carpet wools are dull but steady. The auction sale of East India carpet wool opened in Liverpool Monday. Prices were too high for American orders, being about the same as ruled at the November sale.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JANUARY 11, 1896, TO JANUARY 17, 1896, INCLUSIVE.

FORESTRY IN THE UNITED STATES.

The *Philadelphia Record* says: "Meager were the achievements recorded in Dr. Rothrock's report to the Pennsylvania Forestry Association for the year just closed, which was made public a few days since. The work seems to be chiefly that of awakening a sound sentiment and diffusing information concerning the preservation of timbered lands and the afforestation of new tracts. Of progress in this direction the doctor spoke encouragingly, if not with enthusiasm. The most advanced of the United States, however, is far behind most European countries in the systematic and even lucrative handling of forests. An evident reason for this is that in Europe a large part of the forest lands are managed by the state, while private forests are found in parks and game preserves belonging to great estates, the control of which is much influenced by the example of the government. In Europe forestry is made a scientific and industrial art. There are fine schools for teaching sylviculture in all its uses and adaptations, and the business is raised to the rank of a profession. Men of highly-trained competency are everywhere to be found to take charge of forest lands and to bring them to economic uses. Thus, in the sources of revenue from the Austrian state forests are to be found, in addition to the sale of timber, such items as gall nuts, potash, turpentine, resin and tan bark. Such by-products are inappreciable on farm woodlands, and only become valuable when large areas are systematically cultivated. In the extensive lumber regions of Pennsylvania they are wasted, the proprietors neglecting everything but timber. If we are to wait until farmers and private enterprise shall make forestry an industry, we may have a long wait. Sylviculture, to be successful, must become a state industry.

"For this reason, one of the greatest strides forward made by any state of the Union was the purchase of the immense Adirondack Park by the state of New York. Thus far, outside of the government reservations of timber lands, American legislation on this subject has been inefficient. Even these reservations are lawlessly despoiled by the depredations of railways and lumbermen, because they are not adequately guarded and the despoilers punished. Arbor Day, so fostered by legislation in the prairie states, is little more than a sentimental holiday, because the planting of trees is done without system. The timber culture acts, which give 160 acres of land to every citizen who will set out ten acres in trees and till them for five years, has effected little. Claims under these acts have greatly diminished in number in recent years. The public domain has been so prodigally apportioned that the government has very little arable and accessible land to part with. Those who took advantage of the statutes to establish a timber claim did so without interest in forestry or hope of personal profit from it. They planted worthless, scraggy cottonwood, which makes neither good lumber nor fuel. When planted the grove was not kept in good tilth nor dead trees replaced. Nothing was done beyond making a fair legal pretext to a government patent in the nearest land agent's office. Moreover, enthusiasm for sylviculture abated when the result of experiments and observations by the French government showed that forests have no appreciable influence on climate or rainfall.

"The one thing forests do have a profound effect upon is the streams of the country. Their matted roots impound the rainfall in the soil; their foliage retards evaporation. Where the sources of great rivers lie, as of the Ohio, the denuding of the lands subjects the streams either to devastating freshets or of periods of water so low as to stop navigation. But any undertaking of sufficient magnitude to affect our fluvial highways would be too vast even for a single state. It must be a federal enterprise. Before Congress will act with wise energy, a wider

and stronger popular interest in the subject must be aroused. To do this work is at present the foremost and most urgent duty of our forestry associations. In Prussia, where the government has a fine forest management, nearly one-fourth of the entire surface is covered with trees; in the United Kingdom, where the government does but little, the once densely-wooded counties have shrunk their acreage to about 3 per cent. of the area. When our American states shall have reached the Prussian standard there will be no forest problem left, and a permanent and profitable industry will have been established."

THE RAILWAY SYSTEM OF SOUTH AFRICA.

The *Engineering News* says: "Within the past few years a very great development has been made in the railway system of the southeast section of Africa, owing to the rapid growth of the newer colonies, and we present herewith a map showing the present condition of the railway system of this district.

"One of the most important of the new lines is the Netherlands South African Railway, extending across the Transvaal (or the South African republic) from the eastern frontier to Pretoria, and thence down to Johannesburg and the southern frontier. At its southern end, on the Vaal river, it connects with a line crossing the Orange Free State, which in turn connects with a line of the Cape government railways from Nauwpoort to Port Elizabeth (and also to Cape Town). At its eastern end, at Koomati Poort, it connects with the Delagoa Bay & East African Railway, 3-foot 6-inch gauge, 51 miles long, which extends across Portuguese territory to the port of Lourenco Marques, on Delagoa bay. From Johannesburg there is also a line extending to a connection with the Natal government railways at Charlestown, giving through communication to the port of Durban. The Netherlands South African Railway was built by an American syndicate for a Dutch company holding a concession from the Transvaal government. It is of 3-foot 6-inch gauge, with 425 miles open and 185 miles under construction, and its equipment includes 92 engines, 178 passenger cars and 1,500 freight cars. The Transvaal has, therefore, outlets to all the important ports, including Cape Town, Port Elizabeth (724 miles), Port Alfred, East London, Durban (440 miles), and Lourenco Marques (348 miles). From Koomati Poort a French company is building the Northern Railway of the South African republic to Leydsdorp, opening up a mining region, and has about 200 miles of 3-foot 6-inch gauge now under construction.

"The Cape government railways of Cape Colony comprise three main lines, extending from the ports of Capetown, Port Elizabeth and East London. The total length of the system is 2,270 miles, all of 3-foot 6-inch gauge, including the line extending across the Orange Free State. The equipment comprises about 377 locomotives, 439 cars in passenger service and 6,072 cars in freight service. Some articles on these lines will be found in our issues of April 27, June 1 and July 6, 1893, and July 5, 1894. The small line on the west coast, extending from Port Nolloth to Ookiep, 100 miles, is that of the Cape Copper Company, and is 2-foot 6-inch gauge. There is also an additional line (unfortunately shown as uncompleted by a dotted line on the map) connecting the line from East London with the main line crossing the Orange Free State. The railway authorities are now asking for bids for the construction of three light railways, as follows: 1, from Mossel bay (half way between Cape Town and Port Elizabeth, on the coast) eastward to Georgetown, Oudtshoorn, Willowmore and Klipplaat, 229 miles, connecting at the latter place with the Graaf Reinet Railway from Port Elizabeth; 2, from Somerset East (on the main line from Port Elizabeth to the Transvaal) eastward to Cookhouse, Bedford and Fort Beaufort, 76 miles; 3, a continuation of the latter line from Fort Beaufort to King William's Town, where it connects with a branch of the East London line.

"The Natal government railways aggregate about 339 miles, all of 3-foot 6-inch gauge, and the equipment comprises 91 engines, 231 passenger cars and 1,450 freight cars. One of the enormous tank engines, with eight 38-inch driving wheels and six truck wheels, used on the heavy grade divisions, was illustrated in our issue of February 8, 1890. These engines have a total weight of 100,800 pounds, with 69,300 pounds on the driving wheels.

"Besides the lines in the territory shown on the map there are four important pioneer railways, two on the west coast and two on the east coast. On the west coast are the Royal Transafrican Railway, now nearly completed, from St. Paul de Loanda to Ambaca (in the province of Angola), with 220 miles of meter gauge, and the Congo Railway, which is under construction by a Belgian company, from Matadi to Stanley Pool, a distance of 270 miles. This line is of 2-foot 5½-inch gauge, and has been completed for about thirty miles. On the east coast the Beira Railway, 2-foot gauge, extends 180 miles from Beira, on the Pungwee river, to Chimoyo, and is being extended to the Mashonaland goldfields. Work is also about to be commenced by the British government on a line of 30-inch gauge from Mombasa to Uganda, at which latter point it will connect with navigation on the Victoria Nyanza."

STATE OF BRITISH TRADE.

A test of the value of the British colonies and possessions from a commercial and trading point of view is to be found in the proportionate extent of her commercial and trading relations with them as compared with foreign countries. Previous articles in English papers have dealt with the aggregate British trade under the various heads by which it is distinguished. The following shows the "relative proportions of the aggregate trade with foreign countries and with British possessions."

The following gives the aggregate imports in yearly averages and the proportions of that aggregate received from foreign countries and British possessions respectively, firstly in total annual values, and then in percentages, by means of which we at once perceive the relative growth of both:

Years and periods.	Aggregate imports, yearly averages.	—From foreign countries.— Aggregate imports, yearly averages.	Ratio p. cent. of the total.	—From British possessions.— Aggregate imports, yearly averages.	Ratio p. cent. of the total.
1854.....	£152,389,053	£118,239,554	77.6	£34,149,499	22.4
1855–59....	169,589,526	129,363,197	76.3	40,176,329	23.7
1860–64....	235,520,813	167,653,215	71.7	67,869,418	28.3
1865–69....	286,339,904	217,501,653	76.0	68,838,221	24.0
1870–74....	346,067,314	270,002,805	78.0	76,064,539	22.0
1875–79....	375,055,316	292,017,457	77.9	83,037,859	22.1
1880–84....	407,036,362	312,300,626	76.5	95,596,736	23.5
1885–89....	379,666,466	292,811,240	77.1	86,853,250	22.9
1890.....	420,091,997	324,530,783	77.2	96,161,214	22.8
1891.....	435,441,264	335,976,546	77.2	99,464,718	22.8
1892.....	423,793,882	320,627,578	70.9	97,766,304	23.1
1893.....	404,068,178	312,918,724	77.1	91,769,454	22.7
1894.....	408,344,810	314,432,644	77.0	93,912,166	23.0
1890–94....	418,592,026	322,777,255	77.1	95,814,771	22.9
1895.....	....	....	....	....	....

The foregoing figures show that, with all the increase of trade with the colonies, the relative proportions stand at only ½ per cent. higher in forty years.

"The table next following gives the aggregate exports expressed in annual values and the like proportions exported to foreign countries and to British possessions respectively, first in the total amounts, and then in relative percentages. The basis of comparison is the same as before in all cases:

Years and periods.	Aggregate exports, yearly averages.	—To foreign countries.— Aggregate exports, yearly averages.	Ratio per ct. of the total.	—To British possessions.— Aggregate exports, yearly averages.	Ratio per ct. of the total.
1854.....	£115,821,092	£78,967,924	61.8	£36,853,166	31.9
1855–59....	139,512,342	99,741,697	71.6	39,770,862	28.4
1860–64....	179,958,801	130,414,203	72.5	49,575,598	27.5
1865–69....	229,666,659	170,129,454	76.7	53,537,205	23.3
1870–74....	290,179,878	225,055,952	77.5	65,123,916	22.5
1875–79....	257,000,433	184,788,687	71.9	72,211,746	28.1
1880–84....	298,312,522	210,462,335	70.6	87,850,187	29.4
1885–89....	287,116,708	200,666,109	70.0	86,511,209	30.0
1890.....	328,252,118	233,729,049	71.2	94,522,469	28.8
1891.....	309,113,718	215,775,500	69.8	93,338,119	30.2
1892.....	291,640,166	210,428,625	72.2	81,211,541	27.8
1893.....	277,138,270	198,554,958	71.6	78,583,312	28.4
1894.....	273,785,867	195,199,009	71.3	78,585,958	28.7
1890–94....	295,986,028	210,737,748	71.2	85,248,280	28.8
1895.....	....	....	....	....	....

"The preceding figures show that at no period in forty years have the total exports equaled in proportion the percentage to British possessions attained in 1854. But that was a single year. The proportion is just 0.4 per cent. above the average of 1855–59. The highest average ever attained was only 30 per cent. of the total exports in the five years 1885–89. The highest percentage ever attained was in 1859, when the proportion was 31 9 per cent., the same as in 1854. The average seems to be almost stationary, even if we do not admit retrogression. Even the totals for 1890–95 are over £1,000,000 below those of 1885–89."

ELECTRIC RAILWAY COMPETITION.

An exchange explains that "an extremely interesting feature in annual railway reports would be the presentation of facts and figures in regard to the effect of competition by trolley roads. This competition was very strong in many localities last year, and will be more so in the present year. In some cases it has been entirely ignored by the steam roads, which have relied upon their faster time and better accommodations of trains and stations to hold their business. In other cases it has been met by reduced rates and improved service on steam roads, or, on the other hand, its force has been acknowledged by a reduction of train service and retrenchment in other respects. But in many localities the increased inducement of travel afforded by the opening of trolley lines and the improved facilities given by the old roads have materially increased the traffic, so that it may be a question whether the net result has been altogether loss. The Western Maryland is one of the roads against which trolley competition has been severe, and of this President Hood, in his annual report, now says:

"'The electric railroad competition upon the twenty miles of line next to Baltimore during the five months most favorable to such competition, May 1 to September 30, with the consequent reduction of rates, resulted in an increase of 9,128 passengers hauled by this road upon this portion of its line, with a falling off of $6,973.34 in earnings from such business as compared with the corresponding months of 1894. As there was, however, a falling off of $21,705.68 in the passenger earnings of the entire system, it is likely that a portion of this loss is attributable to the continued business depression more than to the electric railroad diversion. Had rates been maintained by this company, it is believed that a materially lighter business and a heavier falling off in revenue would have resulted.'

"The experience of this road is that it lost less money by making heavy reductions in its short distance rates to meet trolley competition than it would have lost in maintaining rates. On the other hand, some companies, like the Illinois Central at Chicago, have refused to come down to the 5c. example set by their electric competitors, and are satisfied with the result. More information on this whole subject is very desirable."

CANADA AND CANADIAN INDUSTRIES.

The London *Times* says: "In Canada nearly one-half of the population rely for their sustenance on agriculture, the products of which constitute one-fourth of the freightage of the railways, one-third of that of the canals, and more than one-half of that of the mercantile marine. The Dominion government have, therefore, fully risen to the paramount importance of keeping the industry in a healthy condition. What has already been done is well summarized in the following extract from 'The Statistical Yearbook of Canada for 1894,' a bulky volume of 1,134 pages, which has just been issued by the Department of Agriculture. Speaking of the measures adopted in various parts of the world to overcome agricultural depression, the yearbook says:

"'Canada * * * has built canals to enable the grain of the interior to reach the seaboard at the lowest possible cost for transport. She has aided railway construction to the extent of $203,000,000, contributed by the federal, the provincial and the municipal authorities. She has carried out a stringent quarantine system to prevent the farmers making losses through imported diseases. She has established experimental farms on which to conduct researches and verify experiments, to test the relative value for all purposes of different breeds of cattle; to direct the manufacture and disposal of dairy products so that the best articles and the highest prices may be secured; to examine the diseases to which cultivated plants and trees are subject, etc. The Department of Agriculture issues bulletins on various subjects, such as the poultry and egg business. The Department of Justice provides against combinations to run up the price of binder twine, etc. The Department of Marine attends to the inspection of vessels intended to carry cattle. The Select Standing Committee of Agriculture every year investigates various subjects touching on agriculture, and publishes reports for general information. In 1894 this committee took evidence on tuberculosis in cattle, cold storage for butter and for meat exports, Dominion registration of pedigree stock, rations in stock raising, agricultural chemistry, horticulture, poultry management, entomology in relation to farm and garden, dairy production in Quebec, cattle and dairying in the Northwest Territories, and instituted close examinations of the experimental farms in order to see in what direction their usefulness might be increased.

"'The Parliament of Canada has provided a tariff for the protection of the farmer against assaults from outside countries, and has passed over twenty acts intended to assist the farming community.

"'The several provinces have been active within their spheres of action in behalf of the farmers by providing agricultural colleges and in other ways.'

"The dairying service of the Canadian Department of Agriculture was begun in 1890, when a dairy commissioner was appointed to act in conjunction with the Central Experimental Farm, and it is recorded that 'the lectures delivered by the dairy commissioner and his assistants have given information on the whole practice of dairying, from the cultivation of the soil, the growing of fodder crops and the management of cattle to the marketing of the finished products. Special instructions and demonstrations have been given to cheese makers and butter makers in nearly all parts of the Dominion.' It may also be mentioned that the Dominion government gives pecuniary assistance to agricultural shows, encourages the holding of agricultural conferences, and not long ago imported 10,000 bushels of the best barley for distribution among the farmers.

"If we turn to what Canada is doing in Great Britain we find that the High Commissioner and his secretary have established an admirable system of obtaining special reports direct from importers or experts on this side as to what Canada can best send here, and under what conditions. Such reports have been obtained in regard to horses, apples, butter, cheese, eggs, hay, and so on, and, being drawn up and signed by thoroughly practical men, they afford the farmers and traders in Canada exactly the information they require. This system is regarded as far superior to a compilation of statistical and other reports by ordinary government officials. It is followed up, too, by the sending of letters from the High Commissioner's office to the importers or the purchasers, inviting suggestions or possible complaints, the answers being sent out to Canada, with the names and addresses of the writers, in order that the exporters in the Dominion may not only have the full benefit of the hints given, but may also know from whom these hints come, so that, if desired, they may communicate direct with the writers.

"Without going into elaborate statistics, it may be mentioned, as showing the practical results of this careful fostering of Canadian industries, that in the matter of 'provisions' alone the value of the exports from the Dominion increased from $12,360,066 in 1890 to $21,292,733 in 1894, those sent to Great Britain rising from $10,312,902 in 1890 to $20,789,467 in 1894. Taking the one item of cheese, the quantity sent to Great Britain (which represented $548,574 in 1868) rose in value from $9,349,731 in 1890 to $15,439,198 in 1894. The weight of our cheese imports from Canada in 1894 was over 105,000,000 pounds. It is, too, partly, if not largely, in order to obtain still further facilities for increasing Canada's exports that the Dominion government have pledged themselves to contribute $750,000 a year for ten years towards the establishment of a new fast Atlantic service."

THE TRANSVAAL REPUBLIC.

The population of the Transvaal is divided into three great sections, the Boer, the Uitlander and the Kaffir, says a correspondent of the London *Times*. "Of these sections two are foreign and one is native to the soil. The Kaffirs have occupied the country from time immemorial; the other two sections are both of them newcomers of the last half century. The first and the smallest foreign section is that composed of the Boer of Dutch descent and British colonial extraction born in Africa, who, treking from what he conceived to be the oppression of British rule in the Cape Colony, wrested a footing for himself in the native territories across the Vaal by force of arms from the original inhabitants.

"The establishment thus made was first recognized as having a political existence by the Sand River Convention of 1852. The Boers claim to have made good their position in 1848. In either case their presence as a power in the state now known as the Transvaal is of less than fifty years' duration. The number of adult males in this section of the population of the state is estimated at 15,000.

"The second foreign influx, to which the Uitlander section of the population owes its existence, is of still more recent origin. No exact date can be fixed for the first appearance of Uitlanders in the body politic of the Traasvaal. Their presence may perhaps be said to have made its first public manifestation in the movement which led to the annexation of the Transvaal by Great Britain in April, 1877, after twenty-five years of precarious existence maintained by whip and rifle, in the teeth of constantly encroaching hordes of hostile natives.

"The prosperous second birth of the Transvaal state dates from 1880, when, after the power of Great Britain had been exerted to break up the savage military organizations that threatened the existence of the white community, and the successful termination of the Zulu and Secocoeni wars had given security to life and property in the hitherto unprotected territory across the Vaal, the Boers arose in arms against British authority and reasserted the independence of the republic.

"The battle of Majuba Hill was fought in February, 1881, and a convention signed in August of the same year gave to the republic a complete measure of self-government in relation to its internal administration, with the exception of certain conditions to be observed in regard to native affairs, but reserved the rights of suzerainty of the British crown. Within five years gold was discovered at Johannesburg, and under the guarantee of British suzerainty an Afrikander, British, Ameri-

can and European population poured rapidly into the country.

"These various elements compose the Uitlander or 'outsider' body of the present population. The number of adult male Uitlanders, occupied chiefly in commercial and industrial development, is estimated at 60,000. The number of the Kaffir population is estimated at 250,000, but this total includes wives and children.

"At the time of the annexation to Great Britain the Transvaal was practically bankrupt. It was in debt and the treasury was empty. But for the intervention of Great Britain and the check given to native enemies of the Transvaal by the Zulu and Secocoeni wars, it is not improbable that the first struggling Dutch republic would have been finally wiped out in massacre. Courage was never wanting to the Boer, but his numbers were too few, his means too limited, to sustain the struggle of which Great Britain relieved him.

"The second republic of 1880 was practically a new creation, and in the fifteen years of its existence the Uitlander has contributed far more to its construction than the Boer. He discovered and he has worked the mineral wealth. In ten years his numbers have increased from a comparative handful to a population estimated the other day at 136,000. He has paid the taxes, he has built the towns, he has constructed the railways, he has established the commerce, he has settled the land, he has fought in the wars. The state which he found nearly bankrupt has this year an accumulated surplus which was calculated to have reached £2,000,000."

THE RECOVERY OF NEWFOUNDLAND.

The London *Daily Financial News* says: "Just as the year is drawing to its close, and in time, indeed, to have a welcome anniversary significance, there comes from private as well as public sources news of the regeneration of our 'oldest colony.' It is twelve months ago, within a very few days, since black ruin seemed to have increased the everlasting fog of Newfoundland. It was on December 10 that the collapse we had long foreseen came alike to the political leaders, to the responsible bankers, to the fish-curer, to the fisherman—to all and sundry throughout the island. * * * From the date of Sir Walter Raleigh we had held the island to our hearts as one, and necessarily one, of our most treasured possessions. It was and it is a treasured possession; but it is impossible to deny that it treated the mother country and the investors on this side with the scantiest of motherly regard.

"Then there came the *débâcle*, and everybody was astounded. Statesmen had been pledging the credit of banks; banks had actually been financing men who claimed to rank as statesmen. The Truck system, as it used to be known in England, was a fixed institution of the fishery industry, except, perhaps, where the French smuggling interest came into competition. The whole island, in fact, was involved in obligations to the banks, the banks to their shareholders, the shareholders to their tradesmen; and thus things ran around a very vicious circle. There is no need to enter into the controversy as to whether crises, like thunderstorms, clear the air. It is a theme older than Jevons, and pretty well as inexhaustible as some of his problems. From the information which comes to hand one would be disposed to say that the Newfoundland crisis had a distinctly salutary effect. It is not to be assumed that the crisis was, therefore, intrinsically a beneficial incident. The crisis came, and brought its lessons, because of the unsound conditions of Newfoundland finances in December twelve months back. The terrible punctuation of the revelations, no less than the moral they helped to prove, served as an awakening, and, as our last news tells us, an awakening into a new and more active mood, directed towards the development of the undoubted resources of the island. The success of the codfishery and of the remarkable yield of seals may be put down, if you like, to the accident of chance. The fact that the Bank of Montreal, the Merchants' Bank and the Bank of Nova Scotia have set up establishments in St. John's is a more pertinent sign of encouragement than any transient dealing in cod or seals.

"But Newfoundland ought to be more than a mere fishery warehouse. It cannot well become a land of milk and honey, but it might be made a country of iron and coal. There are coal measures not far from St. John's of considerable magnitude and potential wealth. In the construction of the new railway from the capital to its western terminus coal of great value is reported to have been discovered. From another authority one learns that within a dozen miles of St. John's, on Conception bay, 'one of the most remarkable and valuable deposits of iron ore in the world' was discovered about June last. There are two beds, it is said, with an area of two square miles, and capable of yielding 50,000,000 tons. It is, of course, as well to await the testimony of an English metallurgical expert before plunging into Newfoundland iron mines. Nevertheless, with her new-found coal, her rediscovered iron and her well-known resources of copper, Newfoundland should do well, if only internal communication be promoted by a wiser government than that which ruled in December, 1894. There are the forests, also. There is a harvest of wood in the uplands that ought to yield a sum to pay the whole interest of the colonial debt. The island wants more railways and also better means of intercommunication along and around the coasts. It might then regain in a relative degree the position it held in what was called the spacious days of Elizabeth.

"What is to be its future fate is not a matter which need concern us here and now. If it accept the overtures of the Dominion it will make Canada the stronger, and strengthen itself in so doing. No one need be under any fear that Newfoundland will ever think of seceding in order to seek an alliance with the United States. Union with Canada will solve several problems, altogether apart from international politics. It would simplify the tariff difficulty; and we see by a United States consular report that the Newfoundland administration is playing fantastic tricks with fiscal principles. It would avoid half, at least, of the frauds on the revenue of the colony caused by the smugglers, who to-day ply as lively a trade thereabouts as ever they did of old on the Cornish or Northumbrian coasts. It would save Newfoundland much in money, and involve no sacrifice of dignity. It is, surely, unnecessary to discuss the point whether the federation of neighboring colonies would impair the everlasting work of consolidating the British empire."

THE VICTORIAN WHEAT HARVEST.

The Melbourne *Argus* says: "From the review of the probable results of the wheat harvest by the agricultural editor of *The Australasian*, which appears on another page, it will be seen that his final estimate of the yield is 7,675,000 bushels, being at the average rate of 5.16 bushels per acre. In addition, there is a considerable quantity of old wheat carried forward, and, after allowing for working stocks, probably 1,000,000 bushels are available under this head. The total quantity available for the season 1895–96 may thus be put at 8,675,000 bushels, from which, deducting food for a population of 1,180,000 at 5½ bushels per head, 6,490,000 bushels, and seed for the next harvest at ¾ bushel per acre, 1,114,500 bushels, a balance of 1,070,500 bushels is left. This quantity will doubtless be exported, partly as flour, during the year to the northern colonies, Victoria retaining a share of this trade."

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

C. P. FRALEIGH, - - - - - - - - Secretary.
A. WHEELWRIGHT, - - - - - - Assistant Secretary.
WM. T. STANDEN, - - - - - - - - Actuary.
ARTHUR C. PERRY, - - - - - - - - Cashier.
JOHN P. MUNN, - - - - - - - Medical Director.

FINANCE COMMITTEE:

GEO. G. WILLIAMS, - - - Prest. Chem. Nat. Bank.
JOHN J. TUCKER, - - - - - - - - Builder.
E. H. PERKINS, JR., Prest. Importers' and Traders' Nat. Bank.
JAMES R. PLUM, - - - - - - - - Leather.

PROVIDENT SAVINGS LIFE

OF NEW YORK,

IS THE LEADING EXPONENT

of life insurance at the lowest rates consistent with absolute safety. It also issues the VERY BEST FORMS OF INVESTMENT INSURANCE which can be devised.

CHARLES E. WILLARD, PRESIDENT,
SHEPPARD HOMANS,
Chairman of the Board and Consulting Actuary.
JOSEPH H. PARSONS, Vice-President. WM. E. STEVENS, Secretary.
E. O. PARKER, Supt. Agencies.

HOME OFFICE, 29 BROADWAY, NEW YORK.
Metropolitan Agency, 173 Broadway.

THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK.

RICHARD A. McCURDY, PRESIDENT.

The Largest and Best Company in the World.

ASSETS OVER $173,000,000.

ISSUES THE MOST LIBERAL FORM OF POLICY.

HARTFORD

Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 1, 1896.

Waterway development, which has constituted a topic of wide discussion, particularly in the section between the great lakes and the seaboard, formed the subject of action at the National Board of Trade meeting at Washington this week. That body adopted the recommendations of the Committee on Waterways, reciting that the most immediate and direct returns may be secured from moneys expended in the rapid prosecution of the works of deepening the channels of the great lakes to a width of not less than 600 feet; of opening deep draft connections between the lakes, the Ohio and Mississippi rivers and the Atlantic; of continuing the improvement of the great rivers of the central basin, consecutively, and by the construction of an interior coastwise canal for domestic commerce and national defense. In order to provide the means to carry out these works as expeditiously as the exigencies of the times require, the report suggested that the government would be justified in imposing a special tonnage tax on all vessels of foreign register. It was also recommended that a commission should be appointed to determine the cost of securing all property rights and franchises belonging to or claimed by navigation companies holding title to important navigable channels. The policy of granting rights and franchises to private corporations for the purpose of improving tributary channels as feeders, and thereby developing the resources and industries connected therewith, involving also the power to collect tolls thereon for a limited period, was declared to be judicious and to be encouraged as the most expeditious and economical method of improving lateral or connecting waterways. The board further urged upon Congress the immediate granting of such financial aid and support as will secure the control of the Nicaragua Canal to the government free from foreign interference.

A feature of the volume on the commercial relations of the United States for the years 1894 and 1895, transmitted to Congress this week, is a comprehensive introductory review of the commerce of the world. This review is based not only on the annual reports of the consuls on the commerce and industries of their respective districts, but also on other sources of information, including the official publications of the United States Treasury and of various foreign governments. Attention is called to the letter of transmittal to the fact that no similar compilation for the volume in question has been made since the issue for the years 1880–81, for the reason that the addition in 1880 of the publication of the monthly consular reports and of various special reports to the work of the Bureau of Statistics of the department, without any permanent increase of its clerical force, rendered it impracticable to undertake so laborious a task, especially during the earlier stages of the experiment of printing a monthly periodical.

In the meantime, however, while the Bureau of Statistics still labors under the disadvantage of an insufficient force, its work has been so systematized and improved that the preparation of a general review is not so formidable as it once was, and the increased demand of late among manufacturers and merchants for information about the trade conditions of foreign countries and the possible share of the United States in the world's commerce has led to the preparation of the survey. As is pointed out in the letter of transmittal, the main object of this review is to set forth the special conditions of trade in the various countries which seem to offer favorable conditions for the introduction of our products, in order that the hindrances to, as well as the opportunities for, the expansion of our commerce may be understood. Special care has been taken to particularize the classes of raw products and of manufactured goods consumed by each country and the prospect of successful competition by the United States with other nations. The recent increase in the percentage of exports of manufactured articles as compared with the total of our exports, it is pointed out, seems to indicate that the United States stands upon the threshold of a great development of this important branch of international trade, and the conclusion arrived at from the general view of the world's commercial and industrial activity submitted is that what is most needed to hasten this development is energetic action on the part of our manufacturers and exporters, after a careful study of the special requirements of the nations whom they wish to secure as customers.

Efforts to secure an amendment of the immigration laws in the direction of restriction are being made in Congress. At recent hearings by the House Committee on Immigration, a number of representative citizens have appeared in advocacy of a bill introduced by a Massachusetts member, which adds to the list of excluded aliens all persons between fourteen and sixty years of age who cannot both read and write the English language or some other language. The supporters of the bill advocated the educational test as a moderate, rational, effective and simple means of further restricting immigration to the country. They thought that the government had the right to exclude illiterate persons from the country, and that this test, combined with others of a more general character, would in all probability shut out a large part of the undesirable portion of the present immigration, would reduce the total number of immigrants, and thereby greatly benefit the labor market and help to maintain the rate of American wages. It would also shut out in a very large measure those elements which tended to lower the quality of American citizenship, and which now in many cases gather in dangerous masses in the slums of our great cities. Action upon the question may perhaps be stimulated by the fact that immigration is again on the increase.

What is known as the "import rate case" has occupied a portion of the attention of the Supreme Court of the United States this week. This case arose on proceedings before the Interstate Commerce Commission in 1889 by the New York Board of Trade and Transportation, which asserted that many railroad lines made an unjust discrimination in favor of goods coming from abroad under joint ocean and railroad tariff against domestic traffic originating at the seaboard. The commission found this to be the case and ordered the roads to cease making the discrimination. One of the roads involved refused to obey the order of the commission on the ground that by doing so it would be deprived of a large part of its traffic between New Orleans and San Francisco, coming from foreign countries, and that if it were compelled to charge upon such traffic the local rates from New Orleans it would suffer great loss and injury without benefit to anyone except its competitive carriers, many of which were not subject to the act to regulate commerce or other laws of the United States. The suit was once argued before the Supreme Court on appeal from a decision rendered against the company, but the court was composed of only eight justices, and was unable to reach a conclusion, hence a reargument before a full bench was ordered. An early decision of the question involved is now looked for.

Among the measures introduced in the New York legislature with the view of facilitating and encouraging commerce upon the canals of the state is one in relation to floating elevators. This measure provides that any person or persons, joint company or stock corporation, owning or leasing, in whole or in part, any floating elevator used for loading grain, coal or sand, shall, upon application to the superintendent of public works, be assigned to and permitted to remain in the basins or canals of the state at such point as will be most convenient for the transaction of the business of loading or unloading coal or sand shipped or to be shipped on the canals; provided, that no obstruction to the free and uninterrupted use of the canals by boats navigating thereon shall be permitted. This bill has just been reported favorably by the Assembly committee having the subject in charge.

The factory inspection authorities in New York have been much encouraged by the opinion of Attorney-General Hancock upholding the constitutionality of the anti-sweating law. In his opinion the attorney-general calls attention to the fact that the act is intended to prohibit tenement house manufacturing, and that outsiders cannot be employed or engaged in the manufacture of the articles named in a tenement or dwelling house, a portion of which is used for residences, whether upon the same floor or not. To construe the statute in any other light would, he says, have a tendency to destroy the purposes of the law.

Captain-General Weyler, who has succeeded Marshal Martinez Campos in the difficult task of restoring Spanish sovereignty in Cuba, has, it is said, decided to adopt the most drastic measures against the revolutionists if within a limited time they do not abandon their insurrectionary attitude. His policy will, undoubtedly, be more severe than that of Campos; as to its success time alone can determine. The effort to secure the recognition of the Cubans as belligerents has thus far failed in Congress, but the Senate on Wednesday adopted resolutions deploring the continuance of the war, urging that it should be conducted upon the principles of warfare acknowledged to be obligatory upon civilized nations when engaged in open hostilities, and requesting the President, if he concurs in the resolutions, to use the good offices of the government to the end that Spain shall be requested to accord belligerent rights to the armies with which it is engaged in war. The adoption of the resolutions seems to have produced little impression in Spain.

THE BOND ISSUE OUTLOOK.

The developments of the week have strengthened the general belief in financial circles that the government bond issue will be found, when the subscriptions close on February 5, to have been considerably oversubscribed. The success of the issue seems practically assured, and this has been reflected by Wall street in the form of a very sensible revival of speculative activity and considerable advances in stock and bond values. Some anxiety has, however, found expression regarding the persistency of the United States Senate in considering the free coinage bill, in the face of the impolicy of such a discussion, while the bond issue is pending, as well as in disregard of the absolute certainty that such a silver measure as it proposes to pass would be rejected by the House, and encounter a Presidential veto in any event. It is believed that the attitude of the Senate is thoroughly understood, and will have very little effect upon our own financial public. The mischievous character of such action is in its effect upon foreign financial sentiment, though whether any serious reduction in the amount of the new bonds that might be subscribed for by foreign bankers will result, is doubtful. On the whole, the opinion of the financial community, which is probably well grounded, points to a gratifying amount of subscriptions from all quarters, and a minimum of disturbance to the money market from preparations to make bids or from payments for the bonds after the allotments are announced.

One of the most favorable symptoms of the week in this connection has been the declining tendency of the exchange market. This, it may be noted, is not considered as having anything to do with subscriptions to the new bonds for foreign account. The decline of exchange, which has carried the selling rate for demand sterling bills as low as 4.88¼, and holds it at between 4.88½@ 4.88¾, would seem to originate in the decided decrease of inquiry for European remittances. Some of the best authorities on the exchange market advance the opinion that at no time in many years have debit balances due by Americans in Europe been so greatly reduced in volume as at the present time. The enforced liquidation of such debts, which was one of the consequences of recent international episodes, would appear, in this view of the case, to have not been without a beneficial effect. It should also be noted that some increase has occurred in the current offerings of bills against commercial exports, this fact being the result not only of the augmented movement of grain and other products to foreign countries, but of the higher prices which have ruled for the past fortnight. As a result of this situation, however, gold cannot be exported, and the Treasury is, consequently, for the time being, guarded from any drain of its specie reserve for the purpose of adjusting balances due abroad. The only withdrawal of specie from the Treasury this week was an amount of $500,000, which, it is understood, is to be shipped to South America on what is known in exchange circles as a triangular transaction. Some small and scattered withdrawals of gold have taken place at the Treasury, but, on the other hand, when the specie reserve reached its lowest point on Wednesday last, it was raised from below $50,000,000 to somewhere about $50,700,000 by the deposit of $1,000,000 of gold turned in by a prominent New York bank in exchange for legal-tender notes. This transaction, it should be noted, appears to have no connection with any organized effort on the part of banks or bankers to strengthen the gold reserve, pending the losing of the bond issue, but was, as a matter of fact, simply dictated with reference to the current requirements for legal tenders of the bank making the exchange.

Some attention has been given to reports that a syndicate or combination, embracing presumably some of the individual components of the late Morgan syndicate, had been formed with the intention of putting in a bid for such portion of the bonds as were not disposed of to the public—that is to say, for any unsubscribed portion. While this report obtained a certain degree of currency, it would appear to be utterly unfounded. It is generally recognized in financial circles that the total bids will amount to considerably more than the $100,000,000 of new bonds, and that such a syndicate would be useless if intended to underwrite the issue, while the prospect of obtaining any bonds at a comparatively low price through such a bid is unworthy of consideration.

THE GOLD RESERVE AND OUR MONETARY PROGRAMME.

The argument has been brought forward in some quarters that the dwindling of the gold reserve is due to deficits in the budget, and that if the revenue were increased sufficiently the gold reserve could be kept intact. Some space is devoted to an examination of this argument in an article in the current *Forum* by Prof. J. Laurence Laughlin, of Chicago University, on "Our Monetary Programme." In dealing with this argument, Prof. Laughlin points out that there are only two ways by which the Treasury can obtain gold, namely, either through the payment of revenue or just as blankets or shoes can be got, by purchase—through the offer of bonds or their equivalent. He shows, however, that the first source has been cut off, for while from 1886 to July, 1890, from 70 to 95 per cent. of all payments to the Treasurer at New York were in gold, since July, 1894, no gold has been paid in, and the payments have been made only in greenbacks or in forms of silver money, and in a graphic chart accompanying the article he shows that while a line indicating the percentage of gold received by the Treasurer at New York has fallen in the eight years covered, a line representing the percentage of United States notes shows an almost corresponding rise.

The first and normal source of supply having thus been cut off, the writer says the reserve can be replenished in only one other way so long as the existing distrust continues, and that is by the sale of bonds. No matter how much revenue be raised, and no matter how much larger the mere surplus of income over expenditure may be, the gold reserve cannot be maintained if that greater revenue and that larger surplus consists of greenbacks or silver money, the objects to be redeemed. To increase taxes to swell out the surplus, Prof. Laughlin says, will not avert our monetary danger unless thereby a change is made in the kind of money paid into the Treasury, and it seems like a joke to say that increasing taxes will increase confidence in the standard when no gold can come in from an increased revenue as things now stand. To make this still clearer the writer has prepared another chart, showing that while from 1890 to the end of 1893 the steady fall of the net gold reserve was accompanied by a fall of the Treasury balance, yet the balance, large or small, was largely made up of gold, whereas from the end of 1893 a very different condition of things has appeared. The balances have been increased by the sale of bonds for gold, yet gold has continued to escape. The wide discrepancy between the Treasury balances and the net gold shows, Prof. Laughlin says, that the resources of the government were ample, but that they were not made up of the right kind of money, and the experience of two years has proved that increasing government balances do not insure a stable gold reserve, even though the increased balances were caused by the direct purchase of gold for the sale of bonds.

In the writer's opinion, in order to restore shattered confidence in the fixity of the standard of money, a bold and aggressive policy is necessary. A few millions, more or less, of gold will not suffice, but a reserve large enough to drive doubt out of the most skeptical mind should be procured, and that without delay. Prof. Laughlin suggests as necessary monetary measures, provision for a full and sufficient gold reserve of at least $200,000,000, by the sale of bonds, the giving notice of the redemption on demand in gold of any and all kinds of government paper and silver money at numerous cities in different parts of the United States, the cancellation of all notes redeemed, and the repeal of the act of May 31, 1878, forbidding the retirement of United States notes, and, finally, if notes are called for, the issue of new notes only on the deposit of gold, dollar for dollar, in the Treasury. These suggestions seem to be essentially sound. Without legal-tender retirement distrust as to the maintenance of the standard cannot be wholly removed, and the history of the recent bond issues shows that a larger issue than has yet been had must be made if the policy is to act in any other way than as a palliative.

NEW YORK CITY'S PROMINENCE AS A PORT OF EXPORT AND IMPORT.

One of the functions of the New York Chamber of Commerce is the preparing of an analysis of annual reports of exports and imports of the United States for the fiscal year, separating totals for New York city from those for other ports. In this way some measure is obtained of the fluctuation in New York city's proportion of foreign commerce.

A comparison of total annual values of foreign commerce at New York and at remaining ports, separately, during eleven years shows that the proportion of the total foreign trade at New York and elsewhere has been fairly constant, continuing about 54 per cent. of the whole at this time, as contrasted with 56 per cent. eleven years ago.

Of the imports at New York one-sixth only in value were received in American vessels, and one-ninth of the imports only went out in American vessels. Interest is lent by the fact that of the importations at other ports one-fifth arrived in American vessels, a larger proportion than at the city named, while of domestic exports sent out from other ports than New York about one-tenth in value went abroad in American vessels, a trifle less than the proportion so going from New York.

Total foreign commerce of the United States for the fiscal year 1894–95 was $1,709,867,836, of which, as explained, New York city reported $934,290,314, or 54 per cent. The year before the value of total foreign trade at all ports was $50,432,355 larger than last year, so the decrease from the year 1893–94 is about 3 per cent. Of this falling off the decrease at New York is $27,028,077, also about 3 per cent.

From classified returns of imports of foreign merchandise at New York it is seen that the largest single importation (in value) was coffee, $79,798,851, or five times as much as was imported at other ports in the United States. Next in importance as to value were importations of sugar and molasses, $38,854,716, almost exactly one-half the total importations of sugar and molasses at other ports. Next, receipts of manufactures of wool, $30,865,766, or more than five times the value of imported manufactures of wool at other domestic ports. Receipts of manufactures of silk at New York were valued at $27,654,214, more than eight times the value of silk manufactures received at other domesic ports. Importations of manufactures of cotton at the metropolis were valued at $25,555,587, more than three times the total value of like importations at other domestic ports, after which rank importations of hides and skins other than fur skins, valued at $18,764,086, two and one-half times the amount of like importations elsewhere in the United States; manufactures of flax and hemp, valued at $18,373,876, or nearly two and one-half times the value of like importations received at other ports than New York; after which, from the point of view of value, come importations of crude India rubber, $17,253,237, against a total valuation of only $1,099,000 for all other crude rubber importations into the country. Receipts of leaf tobacco and manufactures of tobacco from abroad were valued at $11,738,544 at New York, more than twice the value of foreign leaf and manufactured tobacco received at other ports; after which $10,651,697 worth of tinplates, terneplates and taggers' tin imported at New York were 25 per cent. larger in value than the value of those classes of merchandise imported at other cities.

Next in order were importations of tea, valued at $8,811,965, twice the amount received at other ports; $8,691,583 worth of furs and manufactures of furs and fur skins, dressed and undressed, more than five times the value of like merchandise imported at other ports, and leather and manufactures of leather, valued at $8,561,881, more than 60 per cent. in excess of the corresponding total for all other ports.

It is hardly worth specifying that receipts of foreign precious stones at New York were valued at so large a sum as $6,338,042, fully a dozen times the total value of like stones imported at other points, or that receipts at New York of imported wines were valued at $5,465,134, more than three times the value of foreign wines imported elsewhere.

The value of New York city's importations of earthen, stone and china ware last year, $4,708,252, was only moderately in excess of the like total of imports for all other ports, about 10 per cent., and the value of lead and lead ore imported at New York, $1,240,703, was $5,000 less than the total value of like importations at all other domestic ports.

The only items of import with total values amounting to considerable sums in which New York furnished smaller totals than for like importations at other ports were raw silk and wool. New York's imports of raw silk were valued at $7,658,297,

a little more than one-half the total value of importations of raw silk at other ports, and the city's receipts of wool, $1,018,309, were also less than one-half the value of importations of wool at domestic ports other than New York.

So far as the more important lines of importations are concerned, therefore, it is plain that in almost every case, except raw silk and wool, the port of New York received more than a proportionate share.

When exports by ports are considered, New York's dominance is also conspicuous. Foreign shipments of provisions, in which beef, pork and dairy products are included, amounted to $73,062,776 last year, while all other ports shipped of this class of merchandise only $60,571,603 worth.

But the fact that New York does not present the larger totals of values in as many different lines of exports as in the leading lines of importations is made plain by its shipments last year of only $30,097,656 worth of cotton, a little more than one-sixth of the value of cotton exported from all other ports, and by the fact that New York's breadstuffs exported were valued at only $38,566,277, while the foreign shipments of breadstuffs from all other ports were valued at twice that amount. In exports of cattle, also, New York fails to outrank all competing points as to value of shipments, that total for the last fiscal year being $11,698,061, and the total value of cattle shipped from other ports being 50 per cent. larger. But in exports of mineral oils the picture is reversed, New York presenting a total valued at $29,281,327, about 50 per cent. more than the combined value of exports of oils from other ports. Exports of tobacco, leaf and manufactured, were valued at $17,119,621 at New York, 50 per cent. more than from all other ports of export. New York's shipments of agricultural implements were valued at $4,577,307, five times the quantity sent abroad from all other points, and of copper, ingots and bars, at three times the value of that shipped from other points—$10,256,408. Manufactures of cotton exported from New York were valued at more than twice the total from other points—$9,773,458. On the other hand, New York's exports of leather and manufactures aggregated only $7,551,078, as contrasted with exports from all other cities valued at $8,063,329.

THE COAL TRADE SETTLEMENT.

Notwithstanding the amicable feeling which seemed to prevail at the meeting of the anthracite coal railroad representatives last week, there was in the first instance a belief in both coal trade and speculative circles that a settlement of the matters in dispute and an adjustment and regulation of the production might require considerable time and negotiation. The adjournment of the meeting till Thursday of the present week, and the appointment of a committee consisting of Messrs. Thomas of the Erie, Maxwell of the Jersey Central, and Holden of the Lackawanna (Mr. Wilbur of the Lehigh Valley declining to serve on the committee), to which was referred the duty of canvassing the situation and reporting a basis of operations to be followed during 1896, seemed to bear out the idea that a settlement would be slow work. One of the most important developments at last week's meeting was the presentation by the various roads of their aggregate tonnage and production during 1895. The publication of such statistics was suspended by nearly all the companies in July. Since then, while it was known that an enormous overproduction was in progress, there was absolutely no way of forming an estimate of its extent. The figures supplied at last week's meeting, however, not only give the missing information and show the nature and extent of overproduction, but afford an approximately correct basis for judging of the productive capacity of each company in the general scramble which governed their operations during the year just ended. The figures give the tonnage produced by each company from the mines tributary to their respective lines, with the percentage of the total in each case, compared with their individual percentages in 1894. The statement is as follows:

	1895		1894	
	Production.	*Percentage.*	*Percentage.*	*Changes*
Reading	9,905,059	21.47	20.02	Inc. 1.45
Lehigh Valley	7,360,454	15.81	15.52	Inc .29
Jersey Central	5,388,194	11.57	11.71	Dec. .14
Del., Lack. & West.	6,129,260	13.16	14.49	Dec. 1.33
Delaware & Hudson	4,347,843	9.34	9.65	Dec. .31
Pennsylvania Railroad	5,025,645	10.79	11.42	Dec. .63
Pennsylvania Coal	1,746,832	3.75	4.12	Dec. .37
Erie	1,820,038	3.91	4.03	Dec. .12
Ontario & Western	1,424,407	3.06	3.31	Dec. .25
Coxe Bros.	1,905,784	4.71	3.94	Inc. .17
Susquehanna	1,492,244	3.02	1.79	Inc. 1.23
Totals	46,545,670	99.9	100.	

The production for 1895 fairly exceeds expectation. The amount given, 46,545,670 tons, exceeds that for 1894, when it was 41,394,199 tons, by no less than 5,154,741 tons. Even compared with the largest previous annual production of anthracite, that of 1893, when the aggregate was 43,089,536 tons, the excess for 1895 amounts to 3,456,134 tons. In 1892 the output was only 41,893,316 tons; in 1891 it was 40,448,336 tons, and in 1890 35,865,174 tons. In five years, therefore, the yearly production of anthracite shows an increase of 10,680,000 tons. Even allowing for the widening of the region within which anthracite now has the preference for all domestic purposes, the increase seems disproportionate, and would clearly indicate the origin of that demoralization under which the trade suffered for some years past.

Large as the figures are, it has been stated since they were given out that in some instances, at least, the amounts were understated, and that the output of the companies was even larger. This, however, yields in interest to the facts thus disclosed, showing the relative proportions of the output which each company mined. The feature in this connection is, of course, the gain of 1 45/100 per cent by the Reading, its product last year being 21.45 per cent. of the aggregate, against 20.02 per cent. in 1894. The Susquehanna & Western increased its percentage from 1.79 per cent. to 3.02 per cent., a gain of 1.23 per cent., the Lehigh Valley Company also increasing one-fourth of 1 per cent., and the firm of Coxe Bros about .17 per cent. These were the only increases, Lackawanna with a decline of 1.33 per cent., being the chief loser.

It was understood that the difference in the allotment of percentages on which last week's meeting failed to agree was only 1 per cent. of the total. This, however, can be understood in view of the comparatively small percentages of the general changes in the distribution of the year's output. It was, indeed, thought that the Reading would show a larger proportionate production, something like 22 per cent. It now seems, however, that in the race to exhibit increased colliery production the other companies have generally stood their ground fairly well. At any rate, an analysis of the figures, coupled with the more hopeful feeling in the trade, created an idea that a settlement could be arrived at, which was reflected by an immediate advance in market quotations for shares of the anthracite companies.

That the belief was well founded was proved by the action of the adjourned meeting of the anthracite railroads' executive officials on Thursday. The report of the committee making allotments to the various companies was, of course, not satisfactory to all parties. Its adoption by a practically unanimous vote would seem to be the result of recognition of the necessity of making some arrangement that would check the demoralization of the trade. The new allotment makes the percentages for 1896 as follows, compared with the figures for 1895, just published:

	1896.	1895.
Reading	20.50	21.46
Lehigh Valley	15.65	15.81
Jersey Central	11.70	11.57
Lackawanna	13.35	13.16
Delaware & Hudson	9.60	9.34
Pennsylvania Railroad	11.40	10.79
Pennsylvania Coal Company	4.00	3.75
Erie Railroad	4.00	3.91
Ontario & Western	3.10	3.06
Coxe Brothers	3.50	4.71
Susquehanna & Western	3.20	3.02

It is provided that the agreement shall be in force from February 1, 1896, to March 31, 1897, a period of fourteen months.

STRIKES AND ARBITRATION.

The New York State Board of Mediation and Arbitration has just submitted its ninth annual report to the legislature. According to the statistics, 417 strikes and lockouts occurred in the state during the year ending October 31, 1895, the total number of strikes being about the same as during the preceding year. Eighty of these strikes or lockouts lasted less than twenty-four hours, while nearly 200 others were settled within three or four days of their inception. Others dragged along for weeks. The board constantly intervened in such cases, and in many instances final adjustment was arrived at on a basis proposed by the commissioners. The most disastrous strike began January 14, 1895, when about 4,500 men employed in various capacities by trolley railroads of Brooklyn quit work. The details of this strike have been made so familiar that it will be unnecessary to refer to them here. The experience had during the strike, however, leads the board to recall the fact that it has in former reports recommended action by the legislature regulating the relations between corporations created by the state to serve the public and their employees. It now renews those recommendations, in the hope that a law will be enacted by which it will be made imperative upon corporations engaged in public service and their workmen, in the event of threatened strike or lockout, to submit their differences to some designated state authority for adjustment, to the end that the people may not be denied their right to the use of such corporate conveniences or necessities. The recommendations referred to were originally suggested by disastrous strikes on railroads of the state, which have been of annual occurrence. The board fails to recognize the utility of compulsory arbitration, except in a form that may apply to corporations of a public character created for the primary and paramount object of service to the people.

In the view of the board the sentiment in favor of mediation by a third party in cases of labor disputes continues to grow. A strike, it says, may go on indefinitely, without an effort to adjust differences and end the suffering of the toiler that follows idleness, and relieve the employer from loss and vexation incident to disturbance of his business. The authority vested in the board by chapter 63, laws of 1887, enables a member, or the full board, to proceed at once to the place of the strike without invitation, and frequently with eminently satisfactory results. The appearance of an authorized official is, it is urged, often all that is necessary to bring about an understanding between disputants, who are willing to make concessions to the mediator that they would be loath to grant if obliged to face each other.

It is pointed out as a notable fact that under the first sections of chapter 63 of the laws of 1887 providing in detail for voluntary arbitration of differences between employers and employees by boards of their own choosing, such sections having been framed to meet the views and desires of representatives of labor organizations, not one single case in which the course of proceeding prescribed by the act has been followed has come to the knowledge of the board. All that has been accomplished in the way of mediation or arbitration pursuant to the act has been reached by the board through invitation of the parties to disputes or either of them, or through intervention of the board as the act commands.

The board reports that in the case of many of the smaller strikes the information obtainable is indefinite. The causes in some cases were a demand for discharge of a foreman, the payment of wages due, reinstatement of a discharged employee, or other reasons than conditions affecting hours of labor or compensation. It appears that over 20 per cent. of all the strikes were sympathetic, but workmen are becoming less disposed to proceed to this extreme than formerly, it being plain that such strikes are, in a majority of instances, unsuccessful.

THE END OF A RECEIVERSHIP CONFLICT.

Reference of the Northern Pacific receivership complication to the United States Supreme Court, or, rather, to the justices in whose circuits the property is situated, has resulted in a prompt solution of the whole trouble. The Supreme Court judges have decided that the Federal Court for the District of Wisconsin, by which the receivers were originally appointed, and in which the foreclosure suit was started, has jurisdiction, and ought to be recognized as the court having primary cognizance of the matter. Following this is the declaration that the courts of other districts along the line, while protecting the rights of local creditors, should make their proceedings of an ancillary character and subordinate them to those of the court of primary jurisdiction.

This will doubtless end the remarkable spectacle of a half dozen receivers for different portions of the same railroad system. The incident is without parallel in the history of railroad bankruptcies, and threatening as it did to disrupt the property into a number of separate sections, carried with it the danger of a prolongation of the unsatisfactory condition of a great corporation. Since the United States Court in the District of Washington asserted concurrent jurisdiction in the foreclosure and receivership with the court of the Wisconsin district, and proceeded to appoint its own receivers for the part of the road within its district (the example being followed by other district judges), progress in relation to the plan of reorganization has been totally arrested. It now seems that the ap-

pointees of the Wisconsin district judge will be recognized as sole receivers of the whole property. Some little time may elapse before this is carried out and the orders which the Supreme Court justices for the various circuits involved have sent to their respective colleagues on the circuit bench put into effect by the substitution of the receivers appointed at Milwaukee for those recently appointed in the several districts. It is, however, universally recognized that the present developments are calculated to further the reorganization of the property through the consolidated mortgage bonds represented by the general reorganization committee, of which Mr. E. D. Adams is the chairman.

Some of the interesting features of the Northern Pacific case are not neglected in the memorandum, rather than opinion, which the justices of the court of last resort representing the districts whose jurisdiction was in question have signed. Judges Field, Harlan and Brewer say: "We are of opinion that proceedings to foreclose a mortgage placed by a railroad company upon its lines extending through more than one district should, to the end that the mortgaged property may be effectively administered, be commenced in the Circuit Court of the district in which the principal operating offices are situated, and in which there is some material part of the railroad embraced by the mortgage; that such court should be the court of primary jurisdiction and of principal decree, and the administration of the property in the circuit courts of other districts should be ancillary thereto." In view, however, of the fact that a portion of the property at the time of the filing of the creditors' bill was a leasehold (the Wisconsin Central Railroad) within the district of Wisconsin, and that this exercise of power by the court in the district of Wisconsin was recognized by the district courts in every district along the line, they conclude that its primary jurisdiction should be upheld. Mr. Justice Brown, it should be observed, agrees with his brethren in these latter conclusions, waiving his own personal views, to the effect that as the Northern Pacific's business offices are at St. Paul, the district of Minnesota should be treated as the court of primary jurisdiction. Thus ends a conflict in which United States courts should never have engaged.

THE COTTON SITUATION.

The cotton trade appears to be in a sort of waiting stage, apparently as a result of the unwillingness of both buyers and sellers to take new ground pending the outcome of bond operations. As a whole, the tone of the market is quite firm, with the changes from day to day only fractional. The causes which go to make values independent of the financial situation are, as a whole, favorable at least to present values, and account sufficiently for the unwillingness of short sellers to extend their lines. Chief among the supporting features may be classed the strong statistical position of cotton, as shown by the visible supply figures and the movement of the 1895–96 crop into sight. The total world's visible supply at the close of last week was a little short of 4,000,000 bales, or almost 900,000 bales smaller than a year ago at the same date. Of this amount seven-eighths was American cotton, and compared with a year ago the falling off was over 1,000,000 bales, or 22 per cent. Reasons for the falling off in the visible supply of American are to be found chiefly, of course, in the heavily reduced movement of the 1895–96 American crop into sight, the decrease in this movement from a year ago being fully 30 per cent. Estimates based on the movement of last year's crop point to a yield of between 6,750,000 and 7,000,000 bales, which latter figure is, however, classed as rather bearish, and is 500,000 bales in excess of Neill's estimate of 6,500,000 bales for the entire season.

The cotton industry in this country had a fairly satisfactory year in 1895, and recently received reports of the results in Lancashire mills in 1895 are the most satisfactory received for several years past, although the profits reported have not reached the proportions of those made in the boom years from 1887 to 1890. Among the features which are to be considered in forecasting the probable outcome of the present year's operations, however, there are several which do not make for higher prices on the later months of the present calendar year. It should not be lost sight of that the present price of raw cotton is fully 2⅝c. higher than it was a year ago at this time, and ¼c. higher than two years ago, which saw the largest crop grown that was ever produced in this country. That the enhanced price of cotton at present makes for a large acreage the present season seems self-evident, and is supported by the reports of increased sales of fertilizers at the south. This enhanced price will necessarily exercise some effect upon the operations of cotton manufacturing concerns when coupled with the rather less satisfactory demand for cotton goods, indicated by reports of distribution at large eastern centers, and the reduction in price of print cloths and other makes announced this week, while the possibilities lying in improved general business conditions are necessarily hard to measure.

THE POSITION OF SILVER.

A feature of the recent financial situation, which, however, has not attracted much attention, is the relative strength of the silver market. The quotation for bars in the London market, which was 27¼d. per ounce on February 16, 1895, has gradually risen, and since January 1 has been firmly maintained at 30½d., or a little better. It is true that the idea which prevailed, more or less, when the war between Japan and China was concluded, that the latter country would pay a large proportion of the indemnity in silver, or that one or both of the two governments would be large purchasers of the metal, has come to naught. Japan, it seems, procured a certain amount of silver from India, but its purchases were evidently made with care, and in such a way as to create no decided advance in silver prices. The speculation for a rise in silver which was instituted, in view of the probability that the conflict in the East would result in a considerable appreciation in silver, was, therefore, a failure, and the present firmness of the silver market is to be traced to other causes.

The remarks of the London *Statist* on this subject may be, therefore, quoted with interest. That journal says in a late number: "The silver market has been very firm this week, although India, China and Japan are not buying. Considerable orders have been placed for France, and the United States is holding back the metal for higher prices. All this points to the beginning of another speculation in silver, and, in fact, there is an inclination upon the Stock Exchange to buy all kinds of silver securities. The principal reason, no doubt, is that the belief is now becoming general all over Europe, and is shared to a considerable extent in the United States itself, that silver will before long become the real standard of value in the United States. If so, it is argued, the Indian mints will be reopened, and there will be a very sharp rise in the metal."

It, however, proceeds to warn its readers that speculation in silver on such grounds would be rash in the extreme, and proceeds to point out the improbability of the United States being forced to a silver basis. At the same time this eminent English financial authority takes what would seem to Americans a rather too serious view of the chances of our electing what it terms a "silver" President at the national election next November and of strengthening the silver party in Congress. It recognizes the fact that the present Executive's term lasts till the 4th of March, 1897, and that his expressed and consistent opposition to free-silver ideas is a barrier to any pro-silver legislation during that period. But it misses altogether the significant fact that the present House of Representatives is, for all practical purposes, opposed to the plans of the silver extremists and inflationists, while since its members were chosen there has been a visible reaction against the silver men, even in states where a short time ago their views were thought to prevail. The fact that the revolution of sentiment which relegated so many conspicuous advocates of free silver coinage in the House to the shades of private life could not shorten the activity of some of the senators of that stripe seems to have misled our English contemporary.

In fact, if the *Statist's* theory in regard to the causes of the present firmness of silver and the belief to which it refers in coming bull speculation in it is well founded, its warning against the ideas in question is sound, though it does not go far enough. On this side of the ocean it may be said, in fact, that a somewhat different reason is given for the more hopeful feeling in regard to the future of silver. It seems more reasonable to ascribe the effect in question to the continued increase of gold production, in which the United States is taking such a leading part.

FACTORY INSPECTION IN NEW YORK.

An interesting account of the work done in the way of government intervention in the interest of labor in the state of New York is given in the tenth annual report of the State Factory Inspector, just issued. It appears that during the year covered by the report inspections were made in 21,148 separate factories, workshops and bakeries, and in 37 mines, an increase over 1894 of 7,305 inspections; 2,767 of these establishments were inspected twice or oftener. As a result of the visits 15,331 notifications were issued by the factory inspector, requiring 49,302 changes to be made. These changes related principally to the employment of children, overworking of minors, guarding of machinery, means of escape and egress from buildings, sanitary requirements, obscene or immoral writings and markings in toilet rooms and workshops, overcrowding, illiteracy, ventilation, sweat-shop abuses, etc. There were 567,994 persons employed in the establishments inspected, exclusive of mines, 393,182 being men and 174,812 women. Of the males, 22,067 were under 18 years of age and 6,841 under 16. Of the women, 57,722 were under 21 years of age and 7,013 under 16 years of age. There were 211 children under the age of 14 years discharged, and 310 illiterate children under 16 years of age sent out of the factories by the inspectors. The number of children under 16 years of age to each 1,000 employees in the mills, factories and workshops of this state during 1895 was found to be 24½, as against 26.9 for 1894. This is in line with the gradual reduction of each year since the factory law was passed.

Touching the regulation of labor in factories, the report advocates the reduction of the hours of labor of women under 21 years of age and boys under 18 years of age employed in factories from 60 hours per week to forty-eight hours a week, or to an average of eight hours per day, as has been done in other states. It is also suggested that a legislative committee, preparatory to adopting such legislation, should investigate the whole subject of shorter hours of labor, and thus give the advocates and opponents of shorter working hours a full and free opportunity to present their arguments. Such an investigation, if impartially conducted, would, the report says, have great weight in determining the feasibility and propriety of any partial or general reduction of the hours of labor in the state. The provision of the factory law which prohibits the employment of children under 16 in factories unless they can read and write simple sentences in the English language is declared to have resulted in a great improvement. Previous to the adoption of this provision in 1889 there was a great deal of illiteracy found among child workers, not alone in the foreign-born, but in a greater degree among native children. This was the fact in as great degree among child workers in village mills and workshops as in the cities. The passage of the law has, it is said, resulted in a greater school attendance everywhere, and in some districts additional school facilities had to be provided to accommodate the children thus prevented from working. It was this law which later on brought about the enactment of the truancy and compulsory education act of 1894.

Regarding the "sweating" system, it is pointed out that while remedies have been applied so far as the state law will allow, and there has been a marked improvement in the conditions of life for the workers at the clothing trades, as a result of the law and the efforts of a garment workers' organization, there is still much to be done to relieve so-called "home workers" from distressful and disease-breeding conditions, and it is suggested that possibly nothing but a national taxing law will ever eradicate the worst features of the evil. Reference is made to the law passed in 1895 giving the factory inspector certain extraordinary powers over bakeshops. The act was in force just six months at the time of closing the report. There were 1,935 bakeshops inspected under this law. A most revolting state of affairs was found in many bakeshops, especially in New York and Brooklyn. Details are given showing extreme uncleanliness in bakeshops and workmen, the presence of swarming vermin, rodents and other animals in and about the bread and flour, unwholesomeness in the cellars in which the bread for a great part of the population is baked, contagious diseases of the bakers, and their incredibly long hours of toil. It is reported that 122 corporations were found paying wages other than by the weekly system. Most of them promptly complied with the

law when requested to do so, but notices of the commencement of suits were served in twelve cases, and two cases for non-payment of wages weekly are also being tried. The inspection of mines was last year made a part of the duties of the factory inspection department, which found a number of boilers in the mines dangerously defective.

In the effort to enforce the law, 151 civil and criminal suits were instituted by the factory inspector for violation of the factory, bakery and weekly-payment laws. The defendants were mulcted in fines to the amount of $2,485, in sums ranging from $20 to $50. In the 131 cases which reached trial 103 were convicted and fined, sentence was suspended in 11 cases, 2 were withdrawn where the circumstances seemed to warrant it, and 15 were acquitted. In addition to the recommendations referred to above, the report urges that the law prohibiting the employment of children under 14 years of age be extended so as to include mercantile establishments; that eight hours be made the limit of a day's work for women and for children under 16 years of age in factories and mercantile houses, and that a legislative committee be empowered to investigate the general subject of eight hours as a day's labor for all workmen; that laws be passed requiring the erection of suitable fire escapes on hotels, regulating the means of egress and sanitary conditions of halls, theaters, etc., and empowering the inspectors to enforce the same; that no bakeries be allowed in cellars, and that inspectors of steam boilers and examiners of stationary engineers be appointed, with suitable powers.

THE NATIONAL BOARD OF TRADE MEETING.

It was entirely natural that existing financial and currency conditions should constitute a prominent subject of discussion by the National Board of Trade at its annual meeting, which was held in Washington this week, and it was not less natural that it should reach the conclusions which it did in reference to the general subject. The committee to whom the resolutions bearing upon the question had been referred submitted a report declaring that it found the unfortunate conditions which existed one year ago to be substantially unchanged, and urging that the establishment of a sound, stable and efficient monetary system is essential to the restoration of confidence and the prosperity of our industrial interests; that such restoration is an immediate and urgent duty of Congress; that the essential provisions in such a system should include the relief of the government by the retirement and cancellation of the legal-tender notes, under safe and proper conditions as to time and method, and provision for the revision and extension of the national banking system under conditions which will maintain our monetary standard, and secure to the country a safe and ample currency to take the place of the notes so retired. This report was adopted by an overwhelming majority, almost five-sixths of the votes cast being recorded in its favor.

The meeting also took decided action in favor of the enactment of a national bankrupt law. The committee having the subject under consideration reported resolutions reciting that the merchants of the United States, with almost unanimous voice, have petitioned Congress for many years past to enact a law providing both for voluntary and involuntary bankruptcy, and declaring that any law providing for involuntary bankruptcy only will not meet the requirements of the situation; that the National Board of Trade reaffirms its approval of the Torrey Bankruptcy bill, and urges upon Congress its enactment of the only measure that can give permanent beneficial results to the national interests of the United States, and insisting that the passage of an equitable bankrupt law at the present session of Congress is imperatively demanded in the interests of the entire country. These resolutions were discussed at some length, and were adopted by the convention.

Another subject which came up for discussion to-night was that of reciprocity. The committee to whom the question was referred reported a resolution urgently demanding of Congress the enactment of such legislation as will reëstablish and secure our former reciprocal trade relations between the United States and Mexico, the Central and South American countries, and Spanish-American colonies. This resolution was adopted by the convention by an unanimous vote, a circumstance which goes to show the existence of a strong feeling in favor of cultivating closer trade relations with our neighbors to the south.

The board approved a report of the committee on railroad transportation deprecating all movements looking to the government ownership of railway lines, but strenuously advocating a wise, firm and continuous supervision over the operation and management of these great agencies in all matters affecting their relations with the public in the conduct of interstate commerce. It was also resolved that in the judgment of the board the bonded indebtedness of the Pacific Railroad to the government should be extended on the best terms practical, and the passage of the bill now pending in Congress to this effect recommended, and that in the opinion of the National Board Congress should at once pass a law making any person who has been a director, officer or employee of any corporation engaged in interstate commerce ineligible for appointment as assignee or receiver of such corporation.

At the closing session the board adopted a resolution sending greetings to the Associated Chambers of Commerce of Great Britain, reciprocating all the friendly sentiments uttered by English commercial bodies, and expressing the earnest wish that "commerce and religion, representing the great progressive and civilizing forces of the world, may honorably avert collision between the English-speaking nations, who, more than any other, represent the sentiment, 'Peace on earth, good will to men.'"

A UNIVERSAL CENSUS PROPOSED.

A highly interesting proposition was brought forward at the last meeting of the International Statistical Institute at Berne. This was nothing less than the proposal to have, if possible, a universal census in the year 1900. At the instance of Dr. Guillaume, the Director of the Statistical Office of the Federal Government of Switzerland, a committee was appointed to collect information as to the possibility of effecting a synchronous census of each civilized country in the year 1900, and as to the extent to which uniformity might be introduced into the collection and tabulation of the principal data, so as to promote the facility and credibility of international comparisons. The committee to whom the question was submitted at the Congress of the Institute presented a report, the substance of which is given in the last issue of the *Journal of the Royal Statistical Society*. In this report it was suggested that, as the end of the nineteenth century is approaching, it might furnish a suitable opportunity for the different governments to come to some understanding with the object of proceeding simultaneously in the year 1900 to a universal census of the population. There is no need to demonstrate the utility of such an undertaking, which ought, if possible, to take place on the same day in all countries. In any case this would associate an important work with the century which will commence on January 1, 1901, five years from now, and an international enumeration of the population taken in an identical form, so far as all the important points are concerned, would prove interesting alike to all governments and men of science. The difficulties which such an undertaking must encounter are great, but they are not insuperable.

Of the principal civilized countries referred to in the report, the Netherlands will under existing arrangements take a census on the last day of the year 1899; France, Great Britain, Italy and Norway will take their enumerations at some date in the year 1901, while the others—Austria, Belgium, Denmark, Germany, Hungary, Portugal, Sweden, Switzerland and the United States—will take their censuses at some date in the year 1900, five of them fixing upon December 31 and two on December 1 of that year. Of course, in order to arrive at a uniform date for taking the census, some agreement would have to be reached between the principal countries, and it is suggested that a conference should be called, to which not only the governments of the countries mentioned, but those of others not referred to, because they have no regular periods for census taking, should be invited to send delegates, so that the latter also might adopt the day agreed upon by the conference.

It goes without saying that the question of the date of the census will not be the only one to be passed upon by the conference in order to secure such a uniformity in statistical methods and results as to render the work of the greatest utility. A certain number of leading inquiries upon topics of general interest must be agreed upon, so as to make the results valuable for purposes of comparison. So some amount of agreement in relation to the use of terms is in a high degree desirable. The Institute adopted the suggestion of the report to appoint a special committee to study the matter. This committee is to advise as to the most convenient date for taking the census; to determine and formulate such important questions as are of general interest, and which should thenceforward appear on the schedules or census papers of all countries, leaving the responsibility of competing or supplementing such questions to the different countries individually; to define precisely the terms employed in the census papers, in order to avoid all ambiguity and to obtain identical results, and to offer suggestions as to the best means of obtaining united action on the part of the various states, in order to attain the desired object. The committee will report at the next meeting of the Institute in 1897, when some action in reference to the project will be taken one way or another.

The proposal is one of great interest and well calculated to inspire the scientific imagination. It ought not to be difficult at this stage in the world's progress in civilization.

WEST AUSTRALIAN GOLD MINES.

The gold-mining industry of West Australia shared in the boom aroused by the successful development of the Transvaal gold fields, and naturally suffered, in a speculative sense, in the succeeding reaction. More lately the political troubles in South Africa and the consequent further depression in "Kaffirs" have naturally produced a sympathetic effect on "Westralians," as the shares of companies based upon gold-mining enterprises in the district under consideration are dubbed in the argot of the London stock market.

These interruptions have, of course, checked the flotation of new companies to exploit the auriferous reefs of West Australia. Whether this, however, is a permanent disadvantage may be doubted. The district in question, while undoubtedly rich in gold, has nevertheless produced a very large proportion of schemes of a doubtful character. In fact, a great many of the Westralian concerns palmed off on the confiding British public during the height of the recent mining boom belong preeminently to the "wildcat" species, and were simply promoted and brought out to be sold while investors and speculators were under the magic spell of anything with the word gold attached to it. Some of the earliest experiences with West Australians were of this kind. An instance of this was afforded by the Londonderry, which was heralded as a natural treasure-house, capitalized at high figures, and sold to an eager and indiscriminating speculative public, only to prove, on real investigation, what is known to miners as a "pocket," i. e., a very small but rich isolated deposit of ore.

Commenting on this and other features, the London *Financial News* says in a recent article: "But, after all, these matters are only episodes which do not in the least affect the permanent prospects of the Westralian gold fields. That the country is auriferous to an amazing degree is admitted by everyone who knows anything about gold mining. The industry is practically in its infancy, yet during last year the gold output was 231,512 ounces, valued at £879,478. If this result was obtainable under the restricted conditions, and in spite of all the obstacles in the way of a relatively new enterprise, what may we not reasonably expect when the mines are in full working order, when the railway is completed, and when the difficulties of an adequate water supply have been overcome by government liberality and energy? * * * Considering how short a time it is since this district was seriously exploited, it is wonderful what has been done in the way of development. Coolgardie, which a couple of years ago consisted of a few tents, is now a flourishing town, with plenty of hotel accommodation, and it is the opinion of men who know the resources of the country thoroughly that in five years' time it will be as big as Johannesburg is now. The railway has been brought within forty miles of it, and the final section will be completed in a few months, and other railway projects connecting the different gold fields with Perth are rapidly approaching a tangible shape. Hitherto the chief hindrance in the way of the prudent investor's confidence has been the apparent scarcity of water. This would, no doubt, be serious if it could not

be overcome, but there is not a shadow of doubt that it will be overcome. Nearly every report brings intelligence that water is being found at moderate depths, and, apart from that, the projects of the government for providing big storage tanks ought to make the mines independent of all conditions of climate. The government has decided on the prompt expenditure of £100,000 to provide for water at the different centers of the Coolgardie district, and provision for the water supply at other parts will in due course be made. The more serious dangers of the water question may, therefore, be considered as having disappeared into the background. Disappointments will, no doubt, occur in individual instances; expectations will not in every case be fulfilled by results, still, the reports of the engineers on the spot and of all who know the country point to only one conclusion, namely, that Westralia is destined to leap very quickly into a foremost position among gold-producing countries. * * * Outside of the promoting and prospecting companies very few of the Westralian enterprises have, so far, paid dividends, for the simple reason that there has been no time for them to do so. In a number of instances the machinery is now ready for use, and crushing will begin in a short time at the most, and then shareholders will be able to get a true idea of what the mineral wealth of West Australia really is."

REAL ESTATE MORTGAGES IN RUSSIA.

The familiarity of citizens of the United States with the development of the farm mortgage loan business has induced many to imagine that this country, with others in the western world, relatively newly developed, have a comparative monopoly of that feature.

Such, however, does not appear to be the case, and it will interest many to learn that the business of loaning money on land and buildings in Russia has attained considerable proportions.

In a recent report by the American charge d'affairs ad interim at St. Petersburgh, Robert H. D. Pierce, to the State Department, official statistics are given regarding the extent to which "land and buildings privately owned in Russia are mortgaged." It remains to be added that these data are obtainable only to January 1, 1893, and that the tenure of land in Russia is of three classes, that of the crown, the communes, and of "landed proprietors," the latter only being mortgaged.

There are in Russia some thirty-six mortgage banks which are established for the sole purpose of issuing loans upon real estate.

Except the government banks, the territory in which these institutions may make loans is restricted by law, only two banks being permitted to operate in the same province at the same time.

The following is a statement of the mortgages held on land and buildings on January 1, 1893:

Territory.	*Loans on land, rubles.**	*Loans on buildings, rubles.**	*Total, rubles.**
Russian Europe	946,623,742	469,645,969	1,410,269,711
Baltic provinces	63,274,651	28,813,924	92,088,575
Poland	115,097,525	45,749,026	160,846,551
Caucasus	12,102,128	20,564,568	32,667,096
Totals	1,131,098,046	564,773,887	1,695,871,933

On 114,136,500 dessiatines† of land, which in the sixty-six provinces belong to private persons, there were mortgaged January 1, 1893, 102,313 estates covering an area of 46,322,286 dessiatines, or nearly 41 per cent. of the total area. The estates thus mortgaged have been estimated by the banks to have a value of 2,204,639,126 rubles, and the aggregate amount loaned upon them was 1,214,149,281 rubles, of which on January 1, 1893, 1,131,098,046 rubles remained unpaid.

The manner in which the loans on land, not including buildings, are divided among the banks is exhibited, together with other interesting data, in the following table:

Banks.	*Number of estates mortgaged.*	*Area, dessiatines.*	*Estimated value of properties, rubles.*	*Total amount issued, rubles.*	*Balance of loans remaining unpaid, rubles.*
Shareholding banks	25,278	15,722,969	623,576,000	339,629,000	324,397,000
Land Bank of Kherson	3,740	3,187,929	193,475,000	[illegible]	80,117,000
Nobility Land Bank	11,597	[illegible]	573,578,000	[illegible]	319,473,000
Peasants' Land Bank	9,539	[illegible]	70,316,000	53,759,000	40,620,000
Special Section of Nobility Bank	7,771	[illegible]	284,988,000	174,482,000	109,031,000
Land Bank of Saratoff-Simbirisk (now in liquidation)	157	[illegible]	5,470,000	2,548,000	2,218,000
Bank of Nijni-Novgorod	537	145,510	6,864,000	4,728,000	[illegible]
Banks in the Baltic Provinces	33,374	5,523,193	150,434,000	81,150,000	[illegible]
Banks in Poland	9,238	3,713,647	283,743,000	128,509,000	113,783,000
Banks in the Caucasus	1,282	492,041	12,195,000	5,734,000	3,999,000
Totals	102,313	46,322,286	2,204,639,000	1,214,149,000	1,131,098,000

In two hundred and seventy towns, 44,059 buildings on estates are mortgaged, having an estimated value of 1,209,511,204 rubles, and insured for a total amount of 1,094,730,802 rubles. The amount of loans granted on these buildings was 752,578,750 rubles, and on January 1, 1893, the outstanding amount still due to the banks was figured at 564,774,000 rubles.

Of the total amount of loans included in this table, 326,000,000 rubles remain due on real estate in St. Petersburg and Moscow. Outside of these two capitals, the sums loaned on town property have been greatest in Odessa, Warsaw, Riga, Kieff, Tiflis, Kharkoff, Lodz and Vilna, in each of which upwards of 5,000,000 rubles have been loaned.

The estimated town population of Russia, including only European Russia, Poland and the Caucasus, is 12,759,303, so that it appears that the amount of debt upon town real estate averages about 44.25 rubles per capita.

The rural population of the same extent of country is estimated at 71,760,425, making the debt upon rural real estate about 13.40 rubles per capita.

The table giving mortgages on rural property shows that the average debt is 24.72 rubles per dessiatine, while the valuation at an average placed upon the land by the banks is 47.65 rubles per dessiatine. The estimate made by the Department of Agriculture and Rural Economy gave, in 1889, an average value of 71 rubles per dessiatine for the same territory. This latter, however, covered only farming lands, while forests form a considerable part of the large landed estates.

As will have been noted, mortgage loans are effected through the mortgage banks, or banques foncières, organized under several different forms, but except that those belonging to the government are officially administered, and have certain privileges, they are, in effect, the same in manner of performing their functions.

Apart from the government banks, the great majority of loans on real estate are made by joint-stock or shareholding banks. All operate under practically the same rules.

All the mortgage banks are permitted to issue bonds to the extent of ten times the amount of their capital, but not in excess of their loans on real property. These bonds are secured by the entire resources of the bank, and are paid to the borrower at par. As they generally are at a slight premium in the market, it is often possible for the borrower to gain a slight advantage by paying his indebtedness in cash, although he has the privilege of paying in bonds if he desires, and, indeed, the endeavor is to induce him to do so. The interest on these bonds ranges from 4 to 6 per cent., but by far the larger proportion bear 5 per cent., except that those payable in gold bear 4½ per cent.

That these institutions are profitable the *Journal de St. Petersburg* of June 12, 1895, shows from current quotations for the shares of some of these banks. The par value of these shares is 250 rubles, and the advance is due to the large dividends paid. The operation of the banks, it is said, does not materially differ in principle from the banques foncières (land banks) of Germany and France.

The investors in the obligations of these institutions are secured, not by individual mortgages on specified parcels of real estate, but by the entire resources of the bank, including all the mortgages held by it. On the other hand, the banks with their resources are able, in case a debtor is in default with his interest, owing to unforeseen exigencies, to prolong under certain conditions the time for payments without the foreclosure of the mortgage or the sacrifice of the estate, and still without default of interest on the bonds.

It is added, in conclusion, that it might be found that institutions of a similar character, "so modified as to conform more nearly with American business methods and principles," would fill a want in our own country, "as offering to our farmers a system under which they could obtain loans on their properties on a more elastic basis than at present, and to the investors most of the advantages of investments in real securities without the risk which certain periods of great stringency have proved to be attendant upon farm mortgages."

* The "paper ruble"—officially called "credit ruble"—is the actual currency in Russia, in which all general business and other commercial values throughout Russia are estimated, unless otherwise specified. In my report of May 15 I stated the valuation of the paper ruble at 52.1 cents, but at that time it was quoted at 0.6-5 in gold, and, accordingly, my figures were correct.—Consul-General Karel, in Consular Reports No. 180 (September, 1895), p. 21.

† 1 dessiatine=2.6997 acres.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

A press dispatch from Boston says that the Hansa line has decided to place on their route from Boston to London five freight and cattle steamers, which will commence regular trips in February. As yet the agents have not secured new docks to accommodate this increased service, and for the present the vessels will sail from the old docks of the New England and Boston & Albany railways. The North German Lloyd Steamship Company will also find it necessary, on account of their increasing business at Boston, to put on more freight and passenger boats. No decision has been arrived at yet, but it is said that four new boats will be placed in service in the near future, sailing from Boston and Hamburg. It is said that the French Transatlantic Company may establish a New England line from Boston to Brest and Havre. Information as to these asserted changes seems wanting at New York.

Commercial.

The Chicago Board of Trade has approved the report of a sub-committee which has been formulating the plan for trading in cash grain to the exclusion of futures. "The plan is that all trading in wheat shall be in cash property, and that the Board of Trade cash grain depository shall be organized with $1,000,000 paid up capital to take care of the wheat and advance money on it."

It is estimated that New Orleans has received within a year more than 7,000,000 bushels of grain by the Illinois Central alone and about 5,000,000 by the Gould southwestern system, the total being nearly double the aggregate for any previous year.

Galveston has drawn large quantities of grain from the region west of the Mississippi, and it is stated that contracts have been made to export other large quantities through both that city and New Orleans. The result of this, says the Chicago *Tribune*, "is an important diversion of business, which under former conditions would have been done through New York, Philadelphia, Baltimore and Boston."

Recent exports of wheat (flour included) to South Africa from San Francisco amount to 7,622 tons. The combined shipments of flour and wheat to Australia and South Africa for the season to date amount to 27,877 short tons.

From present indications, the cotton crop will be larger than last year. "Fertilizers are now in active demand."

The New York Cotton Exchange has voted in favor of the establishment of a clearing house for settled contracts.

English manufacturers have benefited from the increase in American imports of woolen manufactures, which rose from $14,800,000 in eleven months of 1894 to $53,300,000 in the like period in 1895.

Imports of wool for eleven months ending November 30 are 224,000,000 pounds, valued at $30,000,000, as compared with 96,000,000 pounds, valued at $11,100,000, the year before.

A Mobile dispatch says: "The first tow of coal from the Warrior coal fields of Alabama passed through the new government locks, above Tuscaloosa, last Monday, and in its passage down the Warrior, Tombigbee and Mobile rivers to Mobile has been given a great reception, particularly at Tuscaloosa and Demopolis. All Mobile turned out to give the tow Baltimore and the initial barge of coal a welcome. The mayor and council and officers of the commercial bodies met the boat up the river, where speeches were made. The sixty sail vessels in port were decorated with flags. Every steam whistle in the city shrieked for an hour."

The National Board of Trade this week directed its president, Frederick Fraley, to send a peace message to the Associated Chambers of Commerce at London.

Financial.

The following securities were sold at auction this week at New York:

$200,000	Atchison, Topeka & Santa Fe Railroad Company general mortgage 4 per cent. bonds (Union Trust Company certificates)	74%
$200,000	Atchison, Topeka & Santa Fe Railroad Company 2d mortgage class A bonds (Union Trust Company certificates)	23⅝
$200,000	Colorado Midland Railroad Company consolidated 4 per cent. bonds	21⅛
10	Shares Real Estate Exchange and Auction Room, Limited, $100 each	80⅝
50	Shares National Bank of Commerce, $100 each.	200
25	Shares Leather Manufacturers' National Bank, $100 each	179½
5	Shares Journeay & Burnham, common, $100 each	42½
90	Shares National Park Bank, $100 each.	275
300	Shares Keely Motor Company of New England (orders for) (hypothecated)	20c. per share
10	Shares Kings County Bank	111
206	Shares The French Mirror Plate Co. of New York	50¼
20	Shares Brooklyn Academy of Music	170
$15,000	Central of Georgia, 1st 5 per cent.	109⅝
100	Shares Mechanics' & Traders' Bank of New York	140
$255,000	Atchison, Topeka & Santa Fe gen. 4 per cent	74
$119,000	Atchison, Topeka & Santa Fe 2d, Class A.	23¼
$73,000	Colorado Midland Railroad cons. 4 per cent.	22⅞
50	Shares National Bank of Commerce	200½
25	Shares American Surety Company	221
12	Shares Atlantic Trust Company, New York	170
10	Shares Franklin National Bank	70
2	Shares State Trust Company	190
10	Shares Title Guarantee & Trust Company.	260
25	Shares Phenix Insurance Company of Brooklyn	139½
15	Shares Fifth National Bank, New York	255

The Baltimore *Manufacturers' Record* says: "Probably nine people out of ten are under the impression that the extent and value of the agricultural products of the United States far exceed the value of the manufactured products. Instead of this being true, the total value of manufactured products in 1890 was $9,370,107,624, whereas the total value of all agricultural products for that year, as reported by the statistician of the United States Agricultural Department, was $3,800,000,000."

The Secretary of the Treasury has fixed the drawback allowance on the exported syrup made from imported sugar as follows: "On one gallon of syrup made from sugar testing 90 degrees, an allowance of 1 49/100 pounds, and about 2/100 of a pound for each degree higher or lower, running up to 100 degrees and down to 75 degrees."

A Washington dispatch says: "Appearances indicate that the proposition to establish an international bank on the lines suggested at the late Pan-American Congress will be favorably reported by the House Committee on Banking and Currency. Chairman Walker, of Massachusetts, has said that two, and possibly three, members of the committee might oppose the bill, but that with these exceptions the remainder of the committee would favor it unanimously. Comptroller Eckels, of the Treasury Department, before the committee, favored granting a charter for the bank with some modifications. At the conclusion of the hearing the bill was referred to a sub-committee, who will confer with the Comptroller and the Attorney-General as to the changes needed to obviate the constitutional objections to the measure and make it in harmony with the general policy of the government from a banking standpoint."

W. H. Crossman & Bro. deposited $1,000,000 gold bars in the Assay Office and $100,000 gold coin in the Sub-Treasury this week, all taken from the steamer St. Paul. The kegs holding the gold bars were marked L. Von Hoffmann & Co. and Heidelbach, Ickelheimer & Co., showing that they had not been opened on the other side after being shipped from here.

Railroads.

The Chicago, Milwaukee & St. Paul reports for the six months ending December 31 as follows:

	1895.	1894.	Changes.
Gross earnings	$18,067,722	$14,795,090	Inc. $3,272,632
Operating expenses	10,165,127	9,461,028	Inc. 704,099
Net earnings	$7,902,595	$5,334,062	Inc. $2,568,533

The Southern Railway reports for the last half of 1895 as follows:

	1895.	1894.	Changes.
Gross earnings	$10,325,495	$9,640,606	Inc. $684,889
Operating exp. and taxes.	6,820,966	6,428,541	Inc. 392,425
Net earnings	$3,504,529	$3,212,065	Inc. $292,464

The Columbus, Hocking Valley & Toledo Railroad Company reports for the year ending December 31:

	1895.	1894.	Changes.
Gross earnings	$2,656,162	$2,688,700	Dec. $32,538
Operating expenses	1,477,535	1,442,774	Inc. 34,761
Net earnings	$1,178,627	$1,245,926	Dec. $67,299

The statement of New York, Chicago & St. Louis for year ending December 31 compares as follows with three preceding years:

	1895.	1894.	1893.	1892.
Gross	$6,326,534	$5,636,229	$6,787,748	$6,467,165
Net	1,141,308	872,326	1,308,510	1,092,003
Surp. after dividend.	31,308	-----	54,142	1,036

The Cleveland, Cincinnati, Chicago & St. Louis Railway reports for six months as follows:

July 1 to December 31.	1895.	1894.	Changes.
Gross earnings	$7,382,495	$7,030,819	Inc. $351,676
Operating expenses	5,425,183	5,254,193	Inc. 170,990
Net earnings	$1,957,312	$1,776,626	Inc. $180,686
Fixed charges	1,424,149	1,422,190	Inc. 1,959
Surplus	$533,163	$354,436	Inc. $178,727

The Philadelphia & Reading Railroad Company reports for December:

	1895.	1894.	Changes.
Gross earnings	$1,833,256	$1,551,928	Inc. $281,328
Operating expenses	1,017,518	947,066	Inc. 70,452
Net earnings	$815,738	$604,862	Inc. $210,876
Other income	75,339	72,942	Inc. 2,397
Totals	$891,077	$677,803	Inc. $213,274
Charges	853,167	866,387	Dec. 13,219
Surplus	$37,909	def. $188,584	Inc. $226,494

The Cincinnati, Hamilton & Dayton Railroad Company reports for the year ending June 30:

	1895.	1894.	Changes.
Gross earnings	$5,039,136	$5,094,812	Dec. $55,676
Operating expenses	3,411,150	3,370,408	Inc. 40,742
Net earnings	$1,627,986	$1,724,404	Dec. $96,418
Fixed charges	1,297,100	1,294,776	Inc. 2,324
Surplus	$330,886	$429,628	Dec. $98,742

The San Francisco & Northern Pacific Railroad reports for the year ending December 31:

	1895.	1894.	Changes.
Gross earnings	$448,752	$462,745	Dec. $13,993
Net earnings	160,178	192,376	Dec. 32,198

The Pittsburgh, Youngstown & Ashtabula Railroad Company reports for the year ending December 31:

	1895.	1894.	Changes.
Gross earnings	$1,727,992	$1,224,126	Inc. $503,866
Operating expenses	1,046,031	739,885	Inc. 309,146
Net earnings	$681,961	$487,241	Inc. $194,720

The Mobile & Ohio Railroad Company reports for the six months ending December 31:

	1895.	1894.	Changes.
Gross earnings	$1,893,836	$1,671,502	Inc. $222,336
Operating expenses	1,101,398	1,008,195	Inc. 93,203
Net earnings	$792,439	$663,306	Inc. $129,133

The Wabash reports for the six months ending December 31 as follows:

	1895.	1894.	Changes.
Gross	$6,977,890	$6,286,826	Inc. $691,064
Operating expenses	4,850,326	4,509,373	Inc. 340,953
Net	$2,127,564	$1,677,453	Inc. $450,111

The Omaha & St. Louis Railroad was sold at foreclosure in Omaha this week to Cornelieu B. Gold, of New York, representing the bondholders, for $1,560,000.

The Canadian Pacific reports for the calendar years 1895 and 1894 as follows:

Gross earnings	$18,941,036	$18,752,167	$188,869
Net	7,489,950	6,423,309	1,057,641

The Northern Pacific Railroad reports earnings and expenses for six months ending December 31 as follows:

	1895.	1894.		
Gross earnings	$11,989,282.67	$10,335,616.98	Inc.	$1,653,665.69
Oper. expenses	6,136,090.47	6,152,923.81	Dec.	16,833.34
Net earnings	5,853,192.20	4,182,693.17	Inc.	1,670,499.03
Exps. to earn	51.18%	59.53%	Dec.	8.35%

The Delaware & Hudson report for 1895 compares as follows:

	1895.	1894.	1893.	1892.
Gross	$18,819,618	$18,068,220	$20,672,317	$20,438,541
Net	5,442,886	5,538,680	6,622,186	6,460,784
Balance	2,364,395	2,218,713	3,214,548	3,035,464
Div'ds earned	6.75%	7.10%	10.71%	----
Paid on stock	7%	7%	7%	----

The Boston, Revere Beach & Lynn Railroad reports for the past four years as follows:

	1895.	1894.	1893.	1892
Year gross	$252,628	$268,498	$298,859	$298,912
Net	73,821	83,484	77,243	74,138

The all-rail east-bound shipments of dead freight from Chicago last week were 77,704 tons, against 77,011 tons the previous week and 74,963 tons the corresponding week of the previous year.

The Philadelphia, Reading & New England Railroad Company reports for the year ending December 31:

	1895.	1894.	Changes.
Gross earnings	$768,963	$679,126	Inc. $89,837
Operating expenses	567,273	510,254	Inc. 57,019
Net earnings	$201,690	$168,872	Inc. $32,818
Fixed charges	140,417	140,233	Inc. 184
Surplus	$61,273	$28,639	Inc. $32,634

The San Antonio & Aransas Pass Railroad reports for twelve months ending Dec. 31 as follows:

	1895.	1894.	Changes.
Gross earnings	$1,971,828	$1,996,905	Dec. $25,077
Operating expenses	1,411,548	1,324,364	Inc. 87,184
Net earnings	$560,280	$622,387	Dec. $62,107

The Delaware, Lackawanna & Western reports for the year ending December 31:

	1895.	1894.	1893.
Gross	$44,201,909	$43,058,862	$48,790,973
Operating expenses	37,441,009	36,009,195	40,537,572
Net	$6,760,900	$7,049,667	$8,253,401

The Pittsburgh & Lake Erie annual statement shows gross earnings, 1895, $4,704,857; 1894, $3,880,175; increase, $824,682; net earnings, $1,314,760, against $1,224,551 last year; increase $90,209.

The following railroads report decreased earnings for the third week of January: Cleveland, Canton & Southern, $1,311, and Baltimore & Ohio Southwestern, $14,619. The Savannah, Americus & Montgomery, $3,830; Cape Fear & Yadkin Valley, $3,573; Flint & Pere Marquette, $10,904.

A Baltimore dispatch says that the Roanoke & Southern Railroad will shortly be absorbed in the reorganized Norfolk & Western system.

Judge Simonton, in the United States Circuit Court at Charleston, on Wednesday, said that he would confirm the sale of the Port Royal & Western Carolina Railroad to Messrs. Thomas and Ryan as soon as they severed their connection with the Southern Railway system.

Miscellaneous.

A Muncie, Ind., dispatch says that the window-glass factories of Western Manufacturers' Association will start on February 8.

The board of managers of the Joint Traffic Association has decided that full inland rates must be exacted by the railroads for carrying import business, the same as for carrying business originating in this country. The steamship lines may bill consignments through, but any cuts in rates must be deducted from their share of the charges.

A recent number of the *Zeitschrift für Elektrotechnik und Elektrochemic* says that at the annual meeting of the German Electro-Chemical Society Dr. U. Borchers exhibited an apparatus by which he not only succeeded, nearly ten years ago, in preparing calcium carbide, but also showed that all the oxides which were regarded as irreducible could easily be reduced by the action of carbon. It consists of a small chamber or furnace of firebrick, through the walls of which pass thick carbon rods 40 mm. in diameter. Inside the chamber these are connected by a thinner carbon rod, 4 mm. in diameter and 40 mm. long. The furnace is fed with a mixture of lime and carbon. The action is not electrolytic, the effect of the current being simply to heat the lime to a temperature at which it is reduced by the carbon.

The World's Fair medals, 23,857 in number, have been received at the United States Treasury Department, Washington. The medals will be held there until the commission meets and adopts measures for their proper distribution.

The *Engineering News* says: "The advisability of making the Erie Canal navigable by torpedo-boats is being now discussed as a means of defending the great lakes in an emergency. To permit the passage of boats like the Cushing, it is proposed to widen one tier of the 18-feet double locks on the Erie Canal so as to pass boats of 23-feet beam. Congress will be asked to appropriate $2,000,000 for this purpose. This widening of the locks would also facilitate ordinary canal traffic."

A course in locomotive engineering, including designing, is to be given in the University of Minnesota, at Minneapolis. It will be in charge of Prof. H. Wade Hibbard, a graduate of Brown University, who has had a practical experience in the shops of the Rhode Island Locomotive Works and of the Pennsylvania Railroad Company, and has also spent some time in Europe studying foreign locomotive engineering.

At the instance of the Swedish Foreign Minister, notice has been sent to the governments of Russia, Denmark, Great Britain and the United States of Herr Andree's projected balloon voyage to the North Pole, and coöperation asked for on behalf of the expedition. Furthermore, the authorities in the countries surrounding the Polar circle will be asked to distribute some thousands of leaflets, containing illustrations of the balloon and asking for information as to the time at which the balloon is seen and the direction of the wind at the moment.

Foreign.

In the Canadian House of Commons, Monday, a resolution looking to reciprocity with the United States in the matter of agricultural implements was defeated, the government opposing it on the ground "that the United States manufacturers would succeed in wiping out the Canadian industries if the protection in the way of duty was removed."

A Caracas, Venezuelan, dispatch, January 27, says: "Many women here have organized for the protection of Venezuelan interests as against European aggression. They announce that they have established a boycott against English goods. The agents of the railroad built by German capitalists say that no abrupt demand has been made by their government in their behalf. They add that the affair has been pending for several months, and that daily conferences have been held with officials of the Venezuelan administration. All this was acquiesced in by the German agents in the hope that the matter would be promptly settled."

During the discussion of the estimates in the Berlin Landtag January 29, Deputy Lueckhoss thanked the government for having put a stop to the uncontrollable systems of business pursued by American insurance companies, which had amassed large fortunes from Prussian clients.

The London *Daily Financial News* says: "It will also be no surprise if we learn to-day that the Clyde shipbuilding dispute has at length been settled, for we cannot believe that the masters will not be able to arrange terms, in view of the additional work that they are likely to get provided they can only get their tenders in in time."

Baron von Hammerstein-Lochten, Prussian Minister at Husbandry, stated in the Landtag, January 29, "that the efforts hitherto made to increase the price of silver had been frustrated by the insuperable objections made by other governments, the coöperation of which was essential to the success of such attempts."

General W. W. Duffield, Superintendent of the Coast and Geodetic Survey, is reported to attach "no importance to a recent London dispatch which asserts that the United States have no right under the Anglo-Russian treaty of 1825 to 3,000,000 acres of land opposite Prince of Wales Island, on the Pacific coast. The dispatch further states that Clarence strait and not Portland inlet is the correct boundary between Canada and Alaska."

A Washington dispatch says: "The Minister of Ways and Communication has made a report to the Siberian Railway committee, of which the Czar is president, on the status of the road, and the progress made during 1895, which, according to an abstract sent to the State Department by Consul-General Karel at St. Petersburg, shows that over 918 miles were built, and that 1,649 miles, or more than one-third the entire line, is now completed. Russia now possesses a direct route from St. Petersburg to the Yenisei river, a distance of 3,056 miles. It appears that the Russians have learned from Americans a method of overcoming the formidable mountains at the southern end of Lake Baikal from the ferry across Lake Michigan, between Kewaunee and Frankfort, which is sixty miles, while the ferriage on Lake Baikal will be not quite twenty miles. It is stated that the government is trying to avoid the old survey north to Vladivostock, and is making efforts to cross Manchuria, which, besides being much shorter and less expensive in construction, would pass through a densely populated region, rich in natural products, but lacking in manufactured goods. It is, however, not yet publicly known whether the negotiations of the matter in Pekin have succeeded."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Congressional Power—Condemning Land.

The Supreme Court of the United States has sustained the constitutionality of the act of Congress authorizing proceedings to condemn certain tracts of land adjacent to the Gettysburg Battlefield Park.

Married Woman—Husband—Creditor.

The Kentucky Court of Appeals held, in the recent case of Rath vs. Rankins et al., that in an action by the wife of an execution defendant to enjoin the sale of land levied on as that of her husband and to have it adjudged to her as her separate estate, as it appeared that the wife furnished the money to pay for the land, and that it was purchased for her by the husband at public sale, but conveyed to him by mistake, the court should have granted the relief sought, the credit not having been given to the husband on the faith of his supposed ownership of the land; that the husband could not make a fraudulent disposition of property exempt from execution, but might waive his right to have his wife labor for him even as against his creditors, and that the wages of the wife for labor performed by her constituted her separate estate.

Exemption—Interstate Law.

The Kentucky Court of Appeals held, in the recent case of Barker et al. vs. Brown et al., that in a contest between an attaching creditor and the sons of the debtor as to the right to the proceeds of a crop of tobacco raised upon the debtor's farm in the state of Indiana, it appearing that the sons had objected to the removal of the tobacco to the state of Kentucky by their father's tenant, who also had an interest in it, because they feared the attaching creditor might attempt to subject it, it was competent for them to show, for the purpose of removing any suspicion of fraud in their claim, that the tobacco was exempt from execution under the statute of Indiana, and that for this reason they objected to the removal until their father's controversy with his creditor could be settled. The court declared the general doctrine to be that the statute of exemption in one state cannot be applied in another state unless the creditor induces the removal of the property against the protest of the debtor for the purpose of seeking a remedy denied him by the laws of the state where the parties live and the property is located.

Note—Mortgage—Sale—Estoppel.

The Supreme Court of Georgia held, in the recent case of Ray vs. Home and Foreign Investment and Agency Company, that where a deed to realty expressly recites that it is made to secure a specified promissory note, payable to the grantee or order, and confers upon "the holder of said note" a power of sale, it is sufficiently certain that such deed intended to confer and did confer this power upon the original grantee therein, whether, as matter of law, the power would or would not pass to his assignee of the note; that in the execution of such power by the grantee it is not indispensably essential to the validity of a sale made thereunder that he should be actually present and personally conduct the sale, and that one who, in dealing with a foreign corporation, borrows its money and secures the loan by a deed to realty containing a power of sale, is estopped from denying the right of such corporation to have this power conferred upon it, or to exercise the same when conferred, and that it will not be presumed in advance that such corporation in the exercise of the power of sale will not act through a duly authorized officer or agent.

Employer's Liability—Fellow-Servant.

The Supreme Court of Minnesota held, in the recent case of Carlson vs. Northwestern Telephone Exchange Company, that the decisive tests as to whether, in any given case, an employee is to be regarded as a vice-principal or a fellow-servant is not his title or his rank, but the nature of the service which he performs; that if he is authorized to perform duties which are the absolute duties of the master, he is to the extent of a discharge of those duties a vice-principal, and that whenever the nature and magnitude of the master's work, whether it be that of construction or otherwise, are such that it is necessary that orders be given regulating the conduct of his employees and directing them where to work, it is not only the right but the absolute duty of the master to give such orders, and in obeying such orders the employees have a right to assume that the master, in giving the orders, has exercised due care for their safety. In the case before the court it appeared that the defendant in excavating a ditch placed the work and the men employed thereon, of whom the plaintiff was one, in charge of a foreman, who had general oversight of the work. The men were subject to his orders; he had authority to employ and discharge them and direct them what to do and where to work, and was the supreme authority there present. The foreman negligently ordered the plaintiff from the place where he had been working into the ditch at a point where he had not previously worked, which was a place of unusual danger by reason of a crack in the earth on the side of the ditch and defects in the curbing, which danger and defects were not obvious or known to the plaintiff, who obeyed the order and was injured by the caving in of the ditch. The court held that in giving the order the foreman was a vice-principal and the defendant liable for his negligence.

Interstate Commerce—Discrimination.

In the case of The United States vs. Reinhart et al., recently decided by Judge Grosscup in the District Court of the United States for the Northern District of Illinois, and reported in the Chicago *Legal News*, it was held that there can be no conviction for unjust discrimination under section 2 of the Interstate Commerce act until it is alleged and proved that an advantage in rates has been given to one person over that obtained by another when both persons, fairly considered, are upon an equality in the time, kind and circumstances of their offering; that rebates, drawbacks or special rates are not of themselves unjust discriminations, for it does not necessarily follow that like rebates, drawbacks or special rates have not been extended to all the patrons of the carrier, and that as the indictments in question failed to state any other specific instances of shipment except those of the defendants, they failed to state a sufficient case of unjust discrimination. Where, however, the counts of an indictment under the Interstate Commerce act averred that the railroad company in question was a common carrier between Kansas City and Chicago; that the rate in force between these points for live stock during the period from April to November, 1892, was 23½c. per hundred; that the defendants were officers of the carrier, and as such officers demanded, collected and received from the shipper on account of shipments of live stock made during that period—namely, more than one hundred carloads of such live stock—the schedule rate then in force, and that in October following they unlawfully and willfully gave and paid, and caused to be given and paid, to the shipper a rebate of $5 upon each carload so transported, the court held that such counts set forth a good cause of action under the provisions of the statute prohibiting variation from the scheduled rates.

Partnership—Bank—Draft.

The Supreme Court of Georgia held, in the recent case of Camp vs. Southern Banking and Trust Company, that where, in the course of its regular business, a partnership had been accustomed to accept drafts drawn upon it by another, and to pay the same to a bank at which they had been regularly discounted, and the bank, within the knowledge of the partnership while yet existing, still held one of these drafts which had not been paid, the bank was, under these circumstances, such a creditor of the partnership as to be entitled to actual notice of its dissolution; that as to this creditor, mere proof of the publication in a newspaper of a notice of dissolution was not, of itself and without more, sufficient to discharge the partnership from liability upon a draft of the kind above indicated, which was in part renewal of a former one duly accepted by the partnership, and upon which latter draft there was an acceptance in the partnership name, although the entering of the same was the unauthorized act of one of the partners, done after the dissolution had, in fact, taken place; that in such a case the bank was not affected by information given to one of its messengers by a member of the former partnership, to whom the draft upon which the partnership was confessedly liable and which was subsequently renewed was presented, to the effect that the partnership had been dissolved and that the other partner was liable for its debts, this information not having, in fact, been communicated to the bank itself, and it appearing that this messenger's agency was confined to collecting commercial papers, and also that it was not within the scope of his business or duty either to report the responses of persons who refused to pay papers presented, or to arrange with such persons or with others for a renewal of the same, and that it is incumbent upon one alleging that the agency of such a collector extended to receiving and communicating to his principal information as to the dissolution of a partnership to affirmatively prove the authority or duty of the collector so to do.

BUSINESS NOTES.

A Soft Coal Pool.

A dispatch to the Philadelphia *Leager* says: "Coincident with the movement for the formation of an ironclad agreement among the anthracite coal companies, a somewhat similar plan is said to be on foot for the combination of the bituminous interests shipping to tidewater. It is probable that the new soft coal pool will go into effect some time in March. The main idea is a central selling agency to handle the total products of the mines. They embrace shippers over the Baltimore & Ohio, Pennsylvania, Norfolk & Western, Chesapeake & Ohio, Beech Creek and Reading. The new agreement will bind the members not to cut rates in any way whatever. The advance in rates, it is said, will probably not be more than 50c. a ton, but many curtailments in expenses will be put into effect."

Natural Gas in Indiana.

The *Engineering News* says: "Natural gas was discovered in Indiana in 1886. The first annual report of the state natural gas inspector, a newly created office, is a voluminous one, and shows a very perceptible diminution of the gas supply over the entire field of an original area of 2,500 square miles. The original rock pressure of the gas was 325 pounds per square inch; after nine years' development this has been reduced to 230 pounds, and it is pointed out that the future decrease will be at a more rapid rate, though the amount wasted is growing less. As a rule these wells are drowned out when the pressure falls below 200 pounds, though a few wells flow gas at 50 pounds pressure. Inspector Leach says that the question of supreme importance at this time is the economical use of natural gas, as many millions of dollars and about 20,000 workmen have been attracted to this gas belt in the last nine years by this inexpensive fuel."

"Grand Army Colony."

A special to the Baltimore *Manufacturers' Record* from Fitzgerald, Ga., the location of the "Grand Army Colony," says: "There are now between six and seven thousand people at Fitzgerald, and the colony is growing rapidly. The Georgia & Alabama Railway brought it one day this month more than 500 colonists, and Mr. Fitzgerald, the organizer of the movement, states that there will be between 35,000 and 40,000 people within the next twelve months. The colony already includes people from every state in the Union except two, Canada also being well represented. A careful investigation shows that many of the colonists, all of whom have come into this section within the last five months, are well-to-do people financially, and that quite a number of them are men worth from $50,000 to $100,000 each. In this respect it is probably different from any great colonization work ever seen. Three banks are already organized and buildings are under construction for them. Two local papers have also been established."

"The Flying Squadron" and Corned Beef.

The New York *Press* says: "If England's flying squadron were to attack the United States she would use American munitions of war against Americans. The fleet is stocked with beef, canned in America. A day or two before the squadron was ordered to sail west, the British government bought 500,000 pounds of corned beef of a Chicago firm. The meat was already in the company's London storeroom, so that there was no need of a shipment from this port. For nearly three years the British government has bought no American canned beef, but has depended on supplies from its colonies. The sale is taken as indicating that Australian supplies have been exhausted. American houses, since the complications abroad have caused comment, have increased their stocks at foreign ports, and the Chicago house was able to supply the government of Great Britain at the shortest possible notice. The Chicago house has sold recently a lot of beef—2,000,000 pounds—to the French government."

British War Ship Construction.

The London *Times* says: "A return dealing with war ships under construction in the United Kingdom gives the following figures: British—Seven first-class battle ships (five at Royal dockyards and two at private yards), with a total displacement of 104,300 tons; six first-class protected cruisers (one at a Royal dockyard and five at private yards), total displacement 72,800 tons; thirteen second-class protected cruisers (seven at Royal dockyards and six at private yards), total displacement 73,400 tons; one third-class protected cruiser, at a Royal dockyard, with a displacement of 2,130 tons; two sloops, at Royal dockyards, displacement 2,100 tons; twenty-three torpedo-boat destroyers, at private yards, 6,900 tons displacement; four torpedo-boats (one first-class and three second-class), at private yards, 330 tons. This gives a total of fifty-six British war ships under construction (sixteen in Royal dockyards and forty in private yards), representing 261,960 tons displacement."

New York's Lumber Consumption.

The *Northeastern Lumberman* says: "New York city is an immense consumer of lumber. During the year 1895, one of general depression, she received 994,909,000 feet of lumber, of which 534,000,000 was received from the interior by canal and rail, 309,718,000 from the southern coast, and 151,191,000 feet, mostly spruce, from Maine and the provinces. As compared with 1894, when the total receipts were 930,795,000 feet, the receipts from the interior fell off about 45,000,000 feet in 1895, the receipts from the southern coast increased about 65,000,000 feet, and the receipts from the eastern coast increased about 46,000,000 feet. In 1893 the total receipts of lumber in New York city were 1,051,700,000 feet, of which 659,500,000 feet came from the interior by canal and boat, 121,699,000 from Maine and the provinces, and 270,561,000 feet from the southern coast. The return of prosperous times, say in 1897, will undoubtedly carry the receipts of lumber in New York city up to 1,200,000,000 feet, of which nearly 180,000,000 feet will be eastern spruce."

The Riches of Venezuela.

The last number of the *South American Magazine*, published in London, contains a glowing account of the riches of the disputed territory on the borders of Venezuela and British Guiana. It states that but for the recent extraordinary action of the President of the United States the immense value of the colony would have remained comparatively unknown to the world, notwithstanding it contains some of the richest and most easily worked gold fields in the world. The country would probably prove to be the richest gold-producing country ever discovered. In 1884 a few Indians and negroes went into the interior and brought down 250 ounces of gold. In 1889–90 the exports of gold from the colony were 32,332 ounces, and in 1894–95 they amounted to 134,047 ounces, making a total production of raw gold in a little over ten years of upwards of £3,000,000. Up to the present time alluvial gold had been the only gold produced in the colony, but now they were preparing to attack the reefs, and machinery for that purpose was being rapidly shipped. The property of the British Guiana development syndicate was served by a government fleet of steamers, a waterway existing between their own port and Georgetown. Their property had produced some of the richest deposits of gold found in Guiana, and yet nine-tenths thereof were as yet comparatively unexplored.

Central Australia.

At a recent meeting of the Royal Colonial Institute, London, Mr. William Austin Horn, of Adelaide, S. A., read a paper on "The Scientific Exploration of Central Australia." Mr. Horn described the experiences of the exploring party, which he himself organized and equipped, and which included leading scientific men nominated by various colonial governments. The expedition started from Oodnadatta, the northern terminal point of the railway from Adelaide, on May 6, 1894, its purpose being the scientific examination of the country from that place to the MacDonnell ranges. The expedition returned to Adelaide in August, 1894. Much of the country traversed was an almost impassable desert, but the MacDonnell ranges, rising to an altitude of 5,000 feet above sea level, had a remarkable influence. Thus, lands which had been reduced by drouth to the condition of a moving mass of sand were sometimes covered within a month of a heavy fall of rain with a most luxuriant vegetation, capable of carrying an enormous amount of stock. As to the aborigines, who were fast dying out, the expedition had been singularly successful in obtaining information in relation to their manners, customs and superstitions. A very large number of valuable photographs were taken, some of them being of ceremonies and rites which were very rarely witnessed by white men. The collections—zoölogical, botanical, geological and ethnological—which the party made were very valuable. Among them were no less than six mammals, several birds, lizards, snakes, fish and insects, and a number of plants new to science. This had necessitated many of them being sent to specialists for classification, and had consequently delayed the publication of the reports. It was hoped that they would result in the publication of a book worthy of being considered a standard work of reference on Central Australia.

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The features of the week are continued retarded demand for merchandise and checked industrial operations. Least satisfactory is the waiting attitude of some of the more important industries. Some factories at Philadelphia are shutting down or running on part time; cotton goods makers regard the outlook for their product unpromising; there is a reaction in the price of steel billets; among fifty pig iron furnaces in the Pittsburgh and Shenango districts fourteen are idle, and the position of woolen goods manufacturers is shown by the fact that foreign woolen goods are relatively most active.

An indication of the continued shrinkage in the volume of business in December and its extension into January is shown by the prolonged decline in totals of weekly bank clearings, that for this week—$891,000,000—being the smallest since the last week in November, 9 per cent. less than last week, 5 5 per cent. smaller than one year ago, although 16 per cent. larger than in the last week of January, 1894. When comparisons are made with corresponding aggregates in 1893 and 1892 (when the volume of business was exceptionally large) the falling off is respectively 36 and 32 per cent. As compared with the clearings in the like week of 1891, this week's total is 10 per cent. smaller.

General trade at the close of January proves disappointing, particularly in central western, western and northwestern states, where the movement of merchandise from jobbers has been slow and unsatisfactory, it being only fair at a few points. The volume of spring goods distributed from Chicago in January falls behind expectations, although larger than in January, 1895. Some traders in territory tributary to Chicago are making orders small, owing to having carried over large stocks and to a desire to confine purchases to actual requirements. At St. Louis spring demand is slow, and general trade is characterized as only fair by the most sanguine. The condition in the northwest is such that grain moves freely in some regions irrespective of low prices. A result of all this is shown by the cuts by New York, Chicago and St. Louis jobbers in prices of standard cotton goods, which demoralizes demand.

Relatively most favorable features of trade are found in the continued strength of prices of leading staples, the conservative attitude of wholesale dealers, and, aside from the improvement in the outlook at Pittsburgh and Baltimore, the actual gain in demand for staples at Charleston, Atlanta, Augusta, Chattanooga, Nashville and Memphis. Prices for leather, lumber and wool remain unchanged, the last being sustained by the strength of the London market. Anthracite coal closes at last week's prices, but with a prospect for higher quotations. Wheatflour, pork, lard and petroleum show no change. Advances are practically for wheat, corn and oats, while reactions in quotations, aside from those in cotton goods, are confined to southern pig iron, steel billets, sugar and cotton.

The extraordinarily heavy movement of wheat and Indian corn from southern ports and the newly developed South African demand for flour on the Pacific coast remain features at Newport News, Galveston, New Orleans, Tacoma and Seattle. Starting up of shingle mills and prospectively of others tends to revive the demand for staple merchandise in Washington, and Oregon farmers are holding wheat for higher prices, which the demand warrants the mills paying. The Superior iron ore allotment for 1896 appears assured, with 3,500,000 tons as the share for Mesaba ores, against 4,000,000 tons of that variety produced last year.

The prospective success of the government bond issue, the absence of disturbance in the loan market, and the decline of exchange below the gold shipping point, combined to create a bullish speculation in the New York stock market. The new government 4 per cent. loan will, it is thought, be oversubscribed, and intending bidders generally seem to have completed their arrangements. The disposition of Wall street professionals is to discount the resulting improvement, and manipulative cliques have advanced various stocks, finding buying support in spite of the hesitation of the general public. The coal stocks have been features of the rise, on the agreement of the anthracite companies to a division of production on a definite basis. Foreign exchange declined on the absence of inquiry and a slightly better supply of commercial bills, but has rallied a little and is dull at 4.88½ @4.88¾ for demand sterling. Only $500,000 gold was shipped this week (to South America), and several millions are en route from London for use in the bond subscription.

Exports of wheat (flour included as wheat) from both coasts of the United States this week show a marked falling off, amounting to only 2,550,000 bushels, compared with 3,849,000 bushels last week, 2,483,000 bushels in the week a year ago, 2,083,000 bushels two years ago, 3,123,000 bushels in the corresponding week three years ago, and 4,740,000 bushels four years ago. Exports of Indian corn hold up well, amounting to 3,197,000 bushels, a trifle more than in the preceding week, more than three times as much as in the week a year ago, 50 per cent. more than in the week two years ago, more than four times as much as in the week three years ago.

Business failures throughout the United States this week, as reported to BRADSTREET'S, show another large increase, not only as compared with last week, but as contrasted with the total for the fourth week in January, 1895, 1894 and 1893. The total is 393; last week it was 341; last year, 312; in 1894, 340; in 1893, 271, and in 1892 it was 279.

The commercial situation at the more important cities in the Dominion of Canada shows no improvement. The movement from jobbers at Toronto is only fair, and uncertainty is felt as to the prospect for payments next week. Business at Montreal is dull, and little improvement is anticipated in the near future. At Quebec city shoe factories are running full time, but other lines are quiet. At Halifax business is dull. Heavy snows in Newfoundland have interfered with business, and destitution exists owing to the failure of the frozen herring industry. Snows throughout New Brunswick have stimulated the lumber industry there. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $17,990,000 this week, against $19,667,000 last week, $18,013,000 in the week last year, and smaller totals in corresponding weeks in three preceding years. There are 63 business failures reported from the Dominion of Canada this week, an exceptionally large number. The total last week was 52; one year ago it was 56, in 1894 it was 44, in 1893 it was 54, and in the corresponding week of 1892 only 34.

FINANCIAL.

The Money Market.

Call money on the Stock Exchange at New York has varied this week between 3@6 per cent., but has been easy to obtain at around 4 per cent. A somewhat easier tone and better offerings are noted in connection with time loans here, though the volume of such funds is not large. A 6 per cent. has prevailed where transactions were made, but 5½ per cent. has in instances been accepted for sixty to ninety days, and concessions are also talked of where gold obligations are given. Some sterling loans are also reported. Commercial paper is quiet, with a limited demand from out of town, at 6@7 per cent. The New York loan market is still affected, however, by preparations for the closing of the government bond subscription, though the idea that extreme stringency is likely has virtually disappeared. The premium for gold or legal tenders, which was ½@⅝ per cent. at the beginning of the week, fell to ⅜ per cent. on the appearance of some round amounts in the market. Among the incidents of the situation is the accumulation of silver certificates, which are in disfavor with banks, as their only outlet for them is by paying them over the counter. On Friday the call loan market was firmer at 4@6 per cent.

The New York Banks.

The noteworthy feature of the bank averages for the week ending January 25 was the continued increase in reserve holdings. The gains were $2,550,000 in specie and $2,116,000 in legal tenders, or a total of $4,667,000. This, of course, must be attributed to preparations for the bond subscription, which also seems responsible for the further decrease of $6,000,000 in loans and that of $2,663,000 in the item of deposits. As a result of the other changes, the surplus reserve was increased $5,332,950. The figures of the statement compare as follows with those of the preceding week:

	Jan. 18.	Jan. 25.	Changes.
Loans	$453,958,200	$447,859,900	Dec. $6,098,300
Specie	73,610,500	76,160,900	Inc. 2,550,400
Legal tenders	81,836,000	83,952,800	Inc. 2,116,800
Deposits	492,403,800	489,740,800	Dec. 2,663,000
Circulation	13,924,400	13,810,500	Dec. 112,900
Total reserve	155,440,500	160,113,700	Inc. 4,667,200
Reserve required	123,100,950	122,435,200	Dec. 665,750
Surplus reserve	32,345,550	37,678,500	Inc. 5,332,950

At the corresponding period last year the surplus reserve was $45,880,450, against $100,043,000 in 1894.

The Boston Banks.

	Jan. 27, '96.	Jan. 20, '96.	Changes.
Loans	$162,778,000	$164,450,000	Dec. $1,672,000
Circulation	8,944,000	8,920,000	Inc. 24,000
Deposits	100,844,000	103,766,000	Dec. 2,922,000
Due from reserve agts	16,448,000	16,970,000	Dec. 522,000
Legal tenders	5,552,000	5,302,000	Inc. 250,000
Specie	11,655,000	11,609,000	Inc. 46,000
Surplus reserve	3,312,143	2,734,571	Inc. 577,572

Foreign Exchange.

The exchange market has been quite variable this week, and, on the whole, weak in its tendency, the notable incident being the decline of the rate

for demand sterling below the point at which gold can be shipped to Europe. The only withdrawal of specie from the Treasury by an exchange house was $500,000, which, it is announced, goes to South America and represents a so-called triangular transaction. The cause of the market's weakness is somewhat complicated. Probably the most effective reason was the slackness of inquiry. Bankers and merchants alike seem to have liquidated their debt balances due abroad pretty thoroughly, and the demand shows a corresponding exhaustion. Commercial bills have been in a little better supply, the advances in grain and provisions creating a correspondingly large volume of drawings. London's purchases in the stock market, though limited, have also yielded a certain amount of bills, while it is understood that some houses were also selling sterling for account of borrowers of money by this process. It is understood that such transactions would be larger with money on time commanding, as it does, 6 per cent. but for the fact that gold obligations are exacted of borrowers, and the rate, on the whole, is slightly higher than in the open market.

The changes in rates under these influences have been constant. Posted quotations were 4.88½ @ 4.89½ last Saturday. On Monday that for long bills was reduced to 4.88 in consequence of the hardening of discounts in London, and actual business was done in that class of bills at 4.87¼ @ 4.87½, a decline of ¼ @ ½c. Demand sterling had meantime fallen from 4.89 to 4.88½ @ 4.88¾, thereby passing the gold export point, and on Tuesday there was further weakness which brought the actual market for sight down to 4.88¼ @ 4.88½, causing a reduction in posted figures for both class to 4.87½ @ 4.89. On Wednesday long sterling sank to 4.87, but on the succeeding day a firmer tone prevailed, owing to the appearance of a little inquiry, and posted quotations were put up again to 4.88 @ 4.89½, with actual rates for demand at as high as 4.88½ @ 4.88¾. On Friday rates were a shade weaker and the market was dull.

Some secrecy is observed in regard to gold shipments from London to New York in connection with the bond issue next week. It is understood, however, that at least £500,000 was shipped hither on Wednesday from London, while certain unknown amounts are said to be in transit from Paris and Berlin.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Jan. 25.	*Jan.* 27.	*Jan.* 28.	*Jan.* 29.	*Jan.* 30.	*Jan.* 31.
4.88½ @ 4.89½	4.88 @ 4.89½	4.87½ @ 4.89	4.87½ @ 4.89	4.88 @ 4.89½	4.88 @ 4.89½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.89 @ 4.89	4.88½ @ 4.88¾	4.88¼ @ 4.88½	4.88¼ @ 4.88½	4.88½ @ 4.88¾	4.88½ @ 4.88¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87½ @ 4.87¾	4.87¼ @ 4.87½	4.87 @ 4.87¼	4.87 @ 4.87¼	4.87¼ @ 4.87½	4.87¼ @ 4.87½

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾ @ 4.89; commercial bills, 4.86¾ @ 4.87; francs, 5.17½ @ 5.15⅝; reichsmarks, 95 1/16 @ 95 9/16.

The Bank of England rate remains at 2 per cent. The bank gained £617,000 specie for the week, and its proportion of reserve rose from 62.52 per cent. to 63.14 per cent. In the London open market discount has been firmer at 11/16 @ ⅞ per cent., and call loans are ½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending January 24, 1896:

	1896.	1895.
Dry goods	$3,011,517	$2,990,966
General merchandise	7,233,947	7,407,121
Total for the week	$11,145,464	$10,398,087
Previously reported	31,166,234	31,016,422
Since January 1	$42,311,698	$41,414,509

The exports (exclusive of specie) from New York to foreign ports for the week ending January 28 were $426,219 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,649,948	$4,931,536
Previously reported	24,842,537	24,751,767
Since January 1	$32,492,485	$29,683,303

Silver.

The silver market was stationary and firm this week. There is, however, little of a tangible nature on which to base the renewed expectation of an upward movement, which is said to prevail in London. Prices show very little variation, and supplies are about normal for this period.

THE STOCK MARKETS.

The New York Stock Market.

The rise of bullish sentiment in speculative circles has been very marked during the past week. Not only has it led to a somewhat wider market and greater activity, but to the development of manipulation on the part of large speculative interests, which have found the rank and file of the Wall street professionals ready to follow their leadership. While public interests and participation in the stock market has increased somewhat, it is still upon a limited scale, and the advancing tendencies which prices have exhibited may be attributed mainly to manipulation of particular portions of the list. The absence of news of a disturbing character has checked reaction, and the general belief that the success of the bond issue is assured, and that it will be accompanied by no real disturbance of the money market, furnishes the basis for the revived bullish sentiment. The short interest has been well-nigh eliminated, but in its present condition there is little disposition to sell the market except where profits are taken, and stocks seem, on the whole, to have drifted into very strong hands during the recent depression. The decline in exchange rates to below the specie export point has had considerable effect in keeping up the buoyancy of speculation. Europe has also bought stocks, though on a limited scale, and at the close of the week a revival of the public appetite for speculation was noticeable, its manifestations, however, being mainly confined to the low-priced members of the share list. Friday's market continued to show great underlying strength, but the expectation of the passage of the free silver bill in the Senate was regarded as a possible reason for a reaction.

Interest has centered mainly in Sugar, in the coal shares, and in the grangers. The manipulation of American Sugar was the main feature. The character of the movement would indicate that inside parties in the company now favor an advance in the stock. For some time a process of accumulating it would seem to have been in progress, and in the past week it has received effective support on all depressions or temporary reactions, and been advanced whenever the condition of the general market warranted such action. Conflicting reports have been circulated in regard to the possible adoption by the German legislative bodies of an increase in the bounty upon exports of refined sugar from that country. The continued strength of raw sugars, due to the practical destruction of the Cuban crop and the alleged shortage in the beet crop of central Europe, has also been a factor the conclusion apparently being that the Sugar Trust here is amply able to take care of itself under such circumstances. Under manipulation of the kind above referred to, the price was advanced from 104 to 108⅝, and was apparently allowed to ease off to 106½ at the end of the week.

The activity and strength of the coal stocks, particularly Reading and Jersey Central, early in the week foreshadowed an agreement on the part of the companies to restrict production and fix its division among the competing roads. The group, in fact, exercised a sustaining effect upon the general market. Thursday's meeting of the presidents resulted in the acceptance of the report of the committee on percentages, though the amounts were evidently unsatisfactory to various interests, the fact that Reading was offered and forced to accept only 20½ per cent. of the aggregate, when it mined and shipped 21½ per cent. in 1895, exciting some comment. The coal stocks, however, continued their rise on Friday, the feeling being that the ending of all hostilities and the restoration of prices to a remunerative basis is of more importance than the mere division of the output. The advance for the week in Jersey Central was from 100¾ to 108½, Reading rising from 10½ to 15⅜ and the first preference income bonds from 28¾ to 30½. Lackawanna rose from 160¾ to 164½, and Ontario & Western from 14 to 15⅞.

The granger stocks have also shown signs of being under efficient professional attention. St. Paul advanced from 69⅝ to 72½, but at the advance there was evidence that a pool was marketing stock. Burlington also attracted attention, and rose from 75⅝ to 78⅝. Considerable strength was displayed in a number of the specialties. Northern Pacific preferred rose to 16⅛ on the decision of the Supreme Court ending the receivership tangle, and Union Pacific was a strong feature.

Boston Stock Market.

[Special to BRADSTREET'S.]

The market has shown more activity this week, with a stronger tone and higher prices at the close. Atchison closes over 1 point higher, with Chicago, Burlington & Quincy 3½ points up, while other railroads close 1@4 points higher. Copper stocks are doing better, Boston & Montana showing a gain of 7⅜ points for the week, with large sales. Butte & Boston has advanced 1¼ points and Calumet & Hecla 5 points for the week. Sugar closes active and higher, the advance for the week being 4½ points. Bay State Gas and United States Leather preferred close higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending			
	Price Jan. 30, 1896.	*Price Jan.* 23, 1896.	*Sales Jan.* 30, 1896.	*Sales Jan.* 23, 1896.

CONTINUED QUIET TRADE.

MOVEMENT OF GENERAL MERCHANDISE NOT EQUAL TO EXPECTATIONS.

CHECKED INDUSTRIAL OPERATIONS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, January 31.—General trade continues of moderate volume, the tendency in all departments being to keep operations within conservative limits. Stocks have shown more activity of late, with general values higher, which indicates a better feeling. Money is quiet, but with the outlook more or less uncertain, and will probably remain so until the sale of bonds is consummated. Rates are a trifle lower. On call, money ranges from 6@7 per cent., with possibly a shading of 6 per cent. in exceptional cases. The best borrower can obtain year money at 5 per cent., with the range up to 8 per cent. The choicest factory paper would probably sell at 5½ per cent. on four months. The boot and shoe trade is quiet, with women's light goods selling at about 2½@5c. per pair above the lowest point of 1894. Men's-wear goods are not as near the low point, as the advance in leather affected their cost more materially. Leather is quiet and steady, with hides dull and rather easier and in small supply. Iron and steel is firmer, with a better tone to the latter. Lumber is quiet and steady, with coal dull.

Providence, January 31.—General business remains quiet. Manufacturers of cotton cloth find little that is encouraging in the condition of the market, and the tendency is to lower prices. A waiting attitude characterizes many industries.

Philadelphia, January 31.—A moderate trade in dry goods is being done. Leather and morocco dull and prices are declining; larger factories are closing down or running on part time. There is a fair demand for paints and glass. There is more inquiry for iron, but no improvement in prices in general.

Pittsburgh, January 31.—While there has been no boom in local trade, there has been a very perceptible increase noted in all lines, and the prospects appear good for a fair business during the spring months. Prices in all lines are well maintained. In some quarters collections are reported a little difficult to make, but merchants generally appear satisfied with the present outlook. The iron market remains dull, and prices have changed but very little. Out of a total of about fifty furnaces in this and the Shenango district fourteen have closed down, which has very materially decreased the output, and, for the time being, prices, it is believed, will go no lower.

Buffalo, January 31.—The usual January dullness in general trade prevails. Clearing house reports would indicate an increase in the volume of business over last year. Collections are still reported slow.

Baltimore, January 31.—The week just past shows no falling off in the cheerful feeling previously reported. Orders continue to come in freely for boots, shoes, clothing and dry goods. But in fertilizers matters do not seem to be in such a flourishing condition, and collections are slow. Crockery orders come in slowly, but results seem as favorable as at the same time last year.

West and Northwest.

Cleveland, January 31.—There is no specially new feature to the general trade situation. The volume of staple merchandise business is fair and in other less prominent lines quiet. The iron and steel markets are without noteworthy change during the week.

Detroit, January 31.—There is only a moderate business doing in general merchandise, and, while manufacturers are fairly busy, collections show no improvement, being still slow and unsatisfactory.

Chicago, January 31.—The sales of spring goods during January have not been up to expectations, but are ahead of last year. Orders are also smaller sized, as interior merchants bought more goods than they were able to sell last fall and are inclined to go slow for the present. In a few instances orders placed for spring delivery in the season have been canceled, but this has not been general. The store trade is quiet, but slightly better than ten days ago. Buyers are very conservative and will not take more goods than there is a prospect of selling during the season. Calls for bar iron and heavy hardware are fair, and buyers who placed their orders some time ago are now requesting deliveries. Larger sales of Lake Superior charcoal pig iron are reported at former prices. Southern holders are weakening slightly. The steel mills have started up again, but orders are not numerous. Lumber is moving more freely to the country trade. Produce sales are limited. Stocks of butter, eggs and potatoes are large and prices decidedly lower. Wool receipts, 42,387 pounds.

Louisville, January 31.—General merchandise is quiet, except some activity noted in heavy hardware, leather and harness goods. Large receipt of leaf tobacco, with firmer prices for best grades. Collections generally fair.

St. Louis, January 31.—The movement of general merchandise is only fair and slow to improve. A few exceptions are noted in such staples as dry goods, boots and shoes, hats and caps, seasonable hardware and groceries. Manufacturers of boots and shoes are doing a satisfactory business considering the prevailing dullness in that line elsewhere. Hemlock sole and oak harness leather is taken in fair quantities. Trade in pig iron shows improvement, several orders for large tonnage having been booked, but values are unsteady. The output of pig lead is also increasing. Iron is in fair demand, without change in price, but steel bars have not followed the recent advance in billets. Although too early for building of consequence, the lumber business shows signs of an early revival. Collections fair.

Kansas City, January 31.—Trade in all lines is quiet. Collections fair. Live stock receipts good, with low values.

Minneapolis, January 31.—Orders for spring goods are coming in well, and the outlook is fair.

Milwaukee, January 31.—There is no change of note in tenor of trade. Still rather quiet. Collections are slow.

Duluth, January 31.—General trade situation little changed. Jobbers report sales good, but collections hardly up to expectation. Flour mills are more active than at this time last year. Output last week 35,000 barrels. Wheat trading quiet. Report of Board of Trade Clearing House for eleven months shows aggregate trading of 348,000,000 bushels. Lumber interests quiet. The iron pool, it is said, has distributed the allotment of output for 1896, giving the new Mesaba range 3,500,000 tons, the largest share of the various iron ranges in this locality. They mined 4,000,000 tons in 1895.

Omaha, January 31.—Trade conditions show little improvement over last week, but in some localities grain is moving regardless of the low prices, and there is a slight improvement in collections.

Sioux Falls, January 31.—Jobbing trade is fair for the season. Retail very quiet.

Southern Cities.

Charleston, January 31.—Wholesale trade in boots, shoes and dry goods reported good. Groceries dull. Collections are moderate.

Savannah, January 31.—Trade and collections are generally dull. Receipts and shipments of spirits are light; rosin steady. Both markets quoted firm.

Atlanta, January 31.—Retail trade is improving some. Wholesale groceries, dry goods and grain report good sales. Collections are good.

Augusta, January 31.—Jobbers report a fair amount of trade for this month, with fairly satisfactory collections. Lumber and hardware merchants are active, indicating considerable building operations. Cotton market is quiet.

Jacksonville, January 31.—Trade and collections for the week are slow.

Birmingham, January 31.—Trade is only fair. Collections are moderate.

Chattanooga, January 31.—Better weather has helped to improve business.

Memphis, January 31.—General trade shows an improvement in all lines. Collections are fair.

Nashville, January 31.—Business of the week has developed with more life, and there is a good output starting.

New Orleans, January 31.—Jobbers report the volume of traffic somewhat disappointing. There is good trading in cotton and sugar, fair movement in rice, and heavy exports of western corn through this port.

Galveston, January 31.—Jobbers report a better demand, but complain of poor collections.

Pacific Coast.

San Francisco, January 31.—Commercial lines quiet. Produce dull. Wheat reacted slightly, but is now active and firm. Barley, rye and corn are firm at an advance. Wheat freights are weaker. Storm has cleared, and future farming probabilities are all favorable. Collections slow.

Portland, January 31.—Farmers have been holding wheat for higher prices. This week mill men were compelled to buy or close down, which caused a lively movement in grain. General trade and collections are fair.

Seattle, January 31.—There are large shipments of general goods to Alaska, but city and country trade is quiet, though latter is picking up through starting of some shingle mills. More will start shortly. Grain movement has increased and flour advanced in price.

Tacoma, January 31.—Dry goods jobbers report 50 per cent. increase over January last. In groceries and hardware no increase. Collections are fair. Lumber trade good. African orders for flour create a great demand for wheat for milling.

Canada.

Toronto, January 31.—Trade is only fair in wholesale circles, spring goods going out slowly. Some uncertainty about payments. Wheat is higher, with a fair demand.

Montreal, January 31.—The trade situation continues dull and featureless, and no improvement is expected before the spring. Quebec city advices report the shoe factories working full time; otherwise trade is quiet. Collections only fair.

Halifax, January 31.—Business in every line is unusually quiet. Heavy snowstorms in Newfoundland have materially interfered with business, and considerable destitution is reported from some quarters occasioned by the failure of the frozen herring fishery. In New Brunswick the outlook for lumber continues good, and the recent snows have given an impetus to operations in that line, which are being conducted with great activity.

Wool.

[Special to BRADSTREET'S.]

The sale of wool continues moderate, although the London market closed firm January 30 on the basis of the full advance. American purchases at the sale were 21,000 bales, largely fine merino Australian. The next London sale commences March 3. Australian wools on this side have sold better in sympathy with London, but most sales here have been below the parity of cost in that market. Domestic wools are quoted firm on the strength of the foreign market, but they sell slowly. Fine washed Ohio fleeces continue quoted at 19½@20½c. for XX and XX and above Ohio, with delaines at 21c. No. 1 clothing and combing washed Ohio fleeces thrown together sell at 22c., with Michigan 1c. less. Territory wools move slow, although quoted much lower in comparison than fine fleeces or Australian. The scoured basis for fine medium and fine is yet about 33@35c., with medium at 32c. Carpet wools are steady but quiet.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

[Special to BRADSTREET'S.]

Trade in jobbing departments continues fair, but the general market with first hands is rather slow. Cotton goods are held rather steady on the part of manufacturers, but buyers are purchasing very conservatively. The cut in price made by leading jobbers in New York, Chicago and St. Louis on some standard makes of cottons tends to demoralize the demand for the present, but the trade look upon the movement as a leader put out to attract business, as the goods were put out at 1¼@1⅝c. below the agents' price. Print cloths have weakened a trifle, but Fall River manufacturers hold for old prices. Printed fabrics are going well into use. Ginghams are slow. Dress woolens are quiet with agents, but jobbers report a fair trade, largely in foreign stuffs. Men's-wear woolens are quiet, with agents only picking up moderate orders from time to time. Overcoatings are quiet.

PIG IRON PRODUCTION IN 1895.

The *Bulletin* of the American Iron and Steel Association says: "The American Iron and Steel Association has received from the manufacturers complete returns of the production of pig iron in the United States in 1895, and also complete returns of the stocks of unsold pig iron in the hands of makers or their agents at the close of the year.

"The total production of pig iron in 1895 was the largest in our iron-making history, amounting to 9,446,308 gross tons, against 6,657,388 tons in 1894, 7,124,502 tons in 1893, 9,157,000 tons in 1892, 8,279,870 tons in 1891, and 9,202,703 tons in 1890. The production in 1895 was 2,788,920 tons, or nearly 42 per cent. more than in 1894, and 243,605 tons more than in 1890, when our largest previous production was attained. The production of pig iron by half years during the last four years has been as follows, in gross tons:

Periods.	1892.	1893.	1894.	1895.
First half.....	4,769,683	4,562,918	2,717,983	4,087,558
Second half.....	4,387,317	2,561,584	3,939,405	5,358,750
Totals.....	9,157,000	7,124,502	6,657,388	9,446,308

"All the large pig-iron producing states shared in the greatly increased production in 1895 over 1894. As might be expected, the most notable increase was in Pennsylvania, which produced 4,701,163 tons, or 49.76 per cent. of the total production, Allegheny county alone producing 2,054,585 tons, which was 590,796 tons more than the production of Ohio, more than double that of Illinois, and nearly two and a half times that of Alabama; and yet Ohio, Illinois and Alabama made splendid records in 1895 as compared with 1894. Allegheny county made 43.7 per cent. of the total production of Pennsylvania in 1895. The Shenango and Mahoning valleys also made remarkably large gains in production in 1895 over 1894. Strange as it may seem, five states made less pig iron in the whole of 1895 than in 1894—Connecticut, New Jersey, Georgia, Michigan and Colorado.

"The increase in the production of pig iron in the second half of 1895 over the first half was also very evenly distributed, nearly every state which produces pig iron sharing in the increase and most of them in fair proportion to their record in the first half. The most notable increases were in Illinois, Pennsylvania, Ohio, Wisconsin, Kentucky, Alabama, Virginia, West Virginia and Tennessee.

"The production of Bessemer pig iron in 1895 was 5,623,695 tons, against 3,808,567 tons in 1894, an increase of 1,815,128 tons. The great increase in the total production of pig iron in 1895 over 1894 was largely caused by the extraordinary demand for Bessemer pig iron, which demand was in turn chiefly caused by the extraordinary demand for structural steel.

"The number of furnaces which were in blast on June 30, 1893, immediately after the panic of that year, was 226; by December 31, 1893, the number in blast had fallen to 137; on June 30, 1894, there were only 108 in blast; on December 31, 1894, the number in blast had increased to 185; on June 30, 1895, there were 186 furnaces in blast, and on December 31, 1895, there were 242 in blast and 226 out of blast. There is a smaller number of furnaces in blast in the present month of January than were in blast on December 31, 1895, including a number of furnaces in the Shenango valley which have been banked since the afternoon of December 31. On January 10 there were only 7 furnaces in blast in the Shenango valley out of a total of 21 furnaces, including 5 alternate stacks.

"The stocks of pig iron which were unsold in the hands of manufacturers or their agents on December 31, 1893, and which were not intended for their own consumption, amounted to 662,068 gross tons; on June 30, 1894, they had fallen to 517,036 tons; on December 31, 1894, they had risen to

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

597,688 tons; on June 30, 1895, they had fallen to 439,290 tons, and on December 31, 1895, they amounted to 444,332 tons, a very slight increase over the unsold stocks on June 30, 1895. As we have frequently explained, our statistics of unsold stocks of pig iron do not include pig iron sold and not removed from the furnace bank, nor pig iron manufactured by rolling-mill proprietors for their own use.

"Although the aggregate quantity of unsold pig iron on December 31, 1895, was virtually the same as on June 30, 1895, there have been some notable changes in the distribution of unsold stocks. There has been a decrease in charcoal stocks from 200,687 tons to 135,033 tons, Alabama and Michigan sharing largely in the decrease. On December 31, 1894, the charcoal stocks amounted to 250,183 tons. They are now much smaller than they have been for a number of years. There has been an increase in bituminous stocks from 129,596 tons on June 30, 1895, to 193,363 tons on December 31, 1895, chiefly in Alabama and in the Shenango and Mahoning valleys. The small quantity of all unsold stocks at the close of 1895 is remarkable. It was only 4.7 per cent. of the year's total production, and represents about fifteen days' production of the active furnaces on December 31.

"In addition to the stocks of pig iron above noted as unsold on December 31, 1895, there should be added 61,800 tons in the yards of the American Pig Iron Storage Warrant Company which had passed out of the hands of the makers, making 506,132 gross tons which may be said to have been then on the market, against 520,590 tons which were similarly held on June 30, 1895. The total quantity of stocks in warrant yards on December 31, 1895, was 106,200 tons."

PETROLEUM EXPORTS.

The *Oil, Paint and Drug Reporter* says: "The official returns made by the Bureau of Statistics at Washington of the exports of petroleum and its various products during the year 1895 for the first time shows a decrease in the amounts exported, though there is shown a substantial increase in the value thereof. The decrease is due to the falling off in the exports of case oil to China, Japan and India, which was in great part due to the war between China and Japan, and is therefore not to be regarded as necessarily a permanent loss of custom. Nor is the decrease so important as appeared at the first examination of the figures. The decrease in total exports of all the products amounted to 41,736,029 gallons, which equals 834,720 barrels. As the monthly exports amounted to 1,421,878 barrels, the falling off is seen to be less important, while the increase in the value of the exports amounted to $15,760,337, which is an advance in money returned for the year's exports of about 34 per cent. The decrease in the amount exported is, therefore, compensated by the larger returns, and the year's business may be regarded as satisfactory.

"The amount of crude exported reached a total of 115,954,128 gallons, showing an increase of 1,685,517 gallons, while the increase in value amounted to $1,643,301. The exports of illuminating oil amounted to 677,500,040 gallons, the decrease being 49,226,040 gallons, but the value shows an increase over that of the exports during 1894 of $13,102,073. The exports of naphtha amounted to 12,757,940 gallons, which shows a decrease of 2,074,027 gallons. The value, however, shows an increase of $78,438. Of lubricating oils there were exported 46,769,565 gallons, which is an increase of 7,794,437 gallons, and an increase in value of $929,586. It will be noticed that the value of the lubricating oils does not show the increase of the other products; in fact, the figures indicate that the price realized was about ¼c. per gallon less than in 1894. Residuum was exported to the amount of 143,850 gallons, which is an increase of 134,084 gallons, and the receipts show an increase of $16,939, but the price realized shows a decrease of a trifle more than ½c. per gallon."

ABOLISHING SEED DISTRIBUTION.

A special from Washington to the *Ledger*, Philadelphia, says: "Evidence continues to accumulate that practical farmers throughout the country have been fully aware for years past of the free seed distribution humbug, and that they strongly support the attitude of the present administration of the Department of Agriculture in abolishing the seed division. Many resolutions and letters are being daily received by Secretary Morton. Among those which reached the Agricultural Department were resolutions adopted by the State Board of Agriculture of the Commonwealth of Pennsylvania, at a meeting held January 22 and 23 at Harrisburg. These resolutions were transmitted by Thomas J. Edge, secretary of the State Department of Agriculture, to each senator and representative in Congress from Pennsylvania. The resolutions recite the pendency of a resolution in the Senate designed to reëstablish free seed distribution, and indorse the arguments advanced by Secretary Morton against the abuse which has been discontinued.

"They state that during three years 27,000,000 packages of seeds have been distributed without benefit to agriculture; that over $2,500,000 has been expended in the past thirty years for the distribution of free seeds, and that the statement is made by the Secretary of Agricultnre that he has been unable to find, as a result, any substantial benefit to the agricultural interests of the country. The board states that in its opinion the necessity for the national government engaging in this free seed distribution, if it ever existed, has passed away. It therefore resolves that the free distribution of seeds by the national Department of Agriculture, as heretofore conducted, is inexpedient and expensive, and cannot under existing conditions be carried on in strict conformity with the law under which such appropriations are authorized; that the same is not calculated to promote the interests of agriculture and horticulture, and that it sincerely deprecates any effort or legislative enactment calculated to revive this wasteful and absurd practice. The board, in conclusion, passed a resolution which declares that 'the Secretary of Agriculture deserves the thanks and commendation of the agriculturists of the country for a strict construction of the law and for his candid and forceful recommendations on the subject.'"

FOREIGN BUSINESS OF INDUSTRIAL CORPORATIONS.

The *Shipping and Commercial List* says: "Below will be found our usual monthly exhibit of business transacted on foreign account by the various industrial corporations, the amount of imported crude materials required by them, and the importance of competing articles from abroad. The comparative statement is for two periods of eleven months, to December 1, 1894 and 1895. The figures are taken from the summary of imports and exports which arrived from the Bureau of Statistics on Tuesday.

"Over a million and a quarter gallons of alcohol and spirits are imported against half that quantity exported. The imports of domestic product returned are not included in these figures. Distillers are bending every energy to find a foreign outlet of more importance than now exists, but they are blocked at every step by the cheap German spirits, made from potatoes. Prospects were favorable for a market in Marseilles, as stated in our last issue, but the prospective buyers placed their limits too low. The cotton oil industry continues to make rapid progress on the other side. The increased exports of oil, cake and meal and lard are extraordinary. A noticeable feature is the movement of cottonseed to foreign ports, which promises to be larger. A gratifying advance is to be noted in the exports of cordage, which are over six million pounds more than the imports, but the foreign demand for American twine has fallen off, while the imports of binding twine have increased over one million pounds. Less sisal and more manila hemp have been imported. Biscuit manufacturers have lost trade abroad to the extent of over a million pounds during the period, while flour makers have been treated still worse, as the decreased exports of flour amount to over one million and a half barrels. In the leather industry we find a tremendous increase in the value of hides imported, and an important decrease in the foreign outlet for sole leather. More paints and pigments have been brought from abroad and less exported. The chief feature in the linseed oil industry is the continued enlarged movement of cake and meal to foreign markets, but much less in volume than the similar product of the cotton oil trade. The only favorable item in the petroleum line is the increasing foreign demand for paraffine wax, aggregating more than one hundred and two million pounds in eleven months. All imports and exports of crude and manufactured rubber show an increase, and the same may be said of toilet and laundry soaps, the outward and inward movement indicating an expansion of business in all branches. Much less sugar has been imported and exported. There is a large gain in molasses, while the foreign orders for glucose have jumped from ninety-six million to one hundred and thirty-six million pounds. Imports of leaf tobacco have fallen off considerably owing to the Cuban insurrection, and foreign manufactured has also lost ground in this market, while domestic continues to find a better outlet abroad. The figures in detail are as follows:

Eleven months.	1894.	1895.
ALCOHOL INDUSTRY.		
Exports alcohol and cologne spirits, gallons	321,679	623,493
Imports, domestic returned, gallons.	1,297,141	735,686
Imports, foreign, gallons	1,030,595	1,361,088
COTTON OIL INDUSTRY.		
Exports oil, gallons	12,946,606	20,168,849
Exports seeds, lbs	5,766,186	11,712,912
Exports cake and meal, lbs	340,357,692	463,744,697
Exports lard, 12 months, lbs	471,811,107	501,880,718
CORDAGE INDUSTRY.		
Imports jute, tons	53,433	105,915
Imports manila hemp, tons	34,065	44,571
Imports sisal hemp, tons	47,532	45,770
Imports cordage, lbs	238,574	315,632
Imports binding twine, lbs	133	1,157,515
Exports cordage, lbs	5,654,207	7,232,646
Exports twine	$706,012	$681,487
FLOUR INDUSTRY.		
Exports flour, wheat, bbls	14,762,222	13,078,083
Exports rye, bbls	3,406	4,264
Exports bread and biscuits, lbs	14,293,083	13,301,439
Imports flour, wheat, bbls	822	1,965
Imports flour preparations	$808,711	$923,472
LEATHER INDUSTRY.		
Imports hides	$16,184,376	$34,273,602
Imports sole leather	$26,873	$286,998
Imports calf skins, dressed	$303,459	$665,585
Imports morocco skins	$2,957,054	$3,937,771
Imports finished upper	$1,745,349	$2,403,846
Exports hides	$2,721,863	$2,609,467
Exports sole leather, lbs	41,975,497	39,254,229
Exports finished upper	$5,729,461	$8,210,754
PAINT INDUSTRY.		
Imports pigments and colors	$932,007	$1,231,751
Imports clays or earths, tons	71,486	90,610
Exports paints and colors	$762,757	$708,402
Exports foreign pigments and colors.	$8,903	$22,633
LINSEED OIL INDUSTRY.		
Imports seeds, bushels	1,047,983	2,872,726
Exports seeds, bushels	13,079	28,618
Exports oil, gallons	60,945	59,794
Exports cake and meal, lbs	215,159,772	273,401,644
PETROLEUM INDUSTRY.		
Imports, gallons	152,273	1,902,105
Exports crude, gallons	106,705,860	105,296,822
Exports refined, gallons	702,959,468	675,968,823
Exports residuum, bbls	2,829	3,002
Exports paraffin wax, lbs	76,599,609	102,569,200
RUBBER INDUSTRY.		
Imports crude, lbs	32,785,632	40,844,812
Imports manufactured	$323,547	$353,440
Exports manufactured	$1,409,888	$1,496,956
SOAP INDUSTRY.		
Imports toilet, lbs	677,690	720,721
Imports laundry	$286,558	$502,355
Exports toilet	$106,949	$155,778
Exports laundry, lbs	20,368,989	29,375,027
SUGAR INDUSTRY.		
Imports No. 16 and above, lbs	54,173,214	83,591,941
Imports under No. 16, lbs	3,847,706,179	3,313,761,902
Imports molasses, gallons	19,212,163	14,334,750
Exports foreign sugar and molasses	$1,288,290	$349,951
Exports refined, lbs	13,373,729	8,171,737
Exports molasses and syrup, gallons.	8,089,310	8,948,730
Exports brown sugar, lbs	585,490	645,261
Exports glucose or grape sugar, lbs	96,785,071	136,639,025
TOBACCO INDUSTRY.		
Imports leaf, lbs	22,927,026	29,409,530
Imports manufactured	$1,920,221	$1,890,991
Exports leaf and stems, lbs	283,791,925	277,469,391
Exports manufactured	$3,509,162	$3,725,598

CATTLE EXPORTS OF AUSTRALIA.

The London *Times* says: "A valuable report on the cattle exports of New South Wales and Queensland has been made by the United States consul at Sydney. He points out that New South Wales has an area of 310,700 square miles, or about six times that of Iowa. Queensland occupies 668,500 square miles, or thirteen times the area of Iowa. But in both colonies together there is probably not as much of what Americans would regard as good agricultural land as would make half of Iowa, yet fully enough pastoral land to make ten such states as Iowa. Hence, there are vast possibilities for pastoral industries. The scanty rainfall and insufficient water supply are now being supplemented by artesian borings, the success of which has greatly extended the pastoral capacities of these colonies. The borings have been prosecuted by both government and private enterprise. The 'Coawburrah' in New South Wales has a daily flow of 5,000,000 gallons, and the aggregate discharge in the colony is put at 40,000,000 gallons per day. In Queensland 300,000 gallons daily are furnished by the Charleville well.

"Land being very cheap, it is held in large tracts. As there are practically no winters, cattle can fatten all the year round on natural grasses, and hence are prepared for market at little cost. In New South Wales one-half of the alienated lands, or 21,000,000 acres, are held by 677 persons, with an average holding of 31,000 acres. Only 23 per cent. of the 198,848,000 acres are alienated, while 66 per cent. are leased, the leaseholds being enormous tracts. All but 10 per cent. of the lands of New South Wales are either alienated or leased. Of the 427,800,000 acres in Queensland, but 12,500,000 acres are alienated, while 280,500,000 acres are leased. Some of the leaseholds aggregate fully 1,000,000 acres, and portions of this cost no more than a farthing per acre per annum for rent. Twenty-two per cent. of Queensland lands are neither sold nor leased, probably being almost worthless.

"At current values cattle can be raised in Queensland at a profit for their hides alone. On apparently reliable information there are about 7,000,000 head of horned cattle in Queensland and 2,500,000 head in New South Wales. The people of the United States have about five-sevenths of one head of cattle per capita, the people of New South Wales about two head, and the people of Queensland nearly twenty head.

"For several years there has been considerable export trade from Sydney in frozen and preserved meats, but the greater advantage of having meat slaughtered nearer to the markets of consumption determined the colonists to make an effort to participate in the live stock export trade to Europe, With this object 520 cattle were shipped on the Southern Cross for London, via Cape Horn, and the result has been too recently before the British public to need detailing again.

"The annual 'cattle crop' of New South Wales is about 400,000, with an annual consumption in Sydney of 110,000 head. The Queensland cattle crop is about 1,000,000 head, with a consumption which may be put at 50,000 head. Most of the cattle hitherto exported have been fattened in Queensland and conveyed by rail to Sydney. Fat cattle, averaging about 1,600 pounds, are worth about £21 per head in Sydney—sold by the pound net or estimated dressed weight. The freight to London, including fittings and free storage for food, is £8 per head. The average weight of those shipped has been about 850 pounds dressed—1,600 pounds gross. It is asserted that cattle do not shrink when taken off the pastures and put on prescribed shipping food.

"No coöperative movement has yet arisen in this branch of the cattle trade, but, as prices are very sensitive under competition, the possibility of the expansion of this antipodean industry is urged upon American cattle feeders as deserving of their attention. Whilst the people of the United States have an advantage of from 9,000 to 12,000 miles in distance, yet in the face of much cheaper production or of lower purchase price, together with the reduction of freights, the shorter distance from the United States would, it is contended, hardly outweigh the advantages possessed by Australian competitors, should their trade become well established.

"The Australian pastures are about as far from the centers of meat consumption as it is possible to get. Yet, says the consul, with a successful trade that would justify specially fitted ships and regular cargoes, 'fine, well-fattened cattle of an average weight of 1,600 pounds could be put into the London market from Australia more cheaply than from any other part of the globe.'"

JAPANESE COMPETITION WITH THE BOMBAY COTTON INDUSTRY.

A recent article in the Bombay *Gazette* says: "To Bombay merchants the most important feature of the present industrial development of Japan is undoubtedly the progress being made in cotton manufacture. Notwithstanding the natural dislocation of trade resulting from the perturbed political atmosphere, the cotton-spinning companies of Japan realized very encouraging results during the first half of the present year, the earnings in some cases being as high as 15 per cent. This favorable return is attributed to the increased price of yarns, owing to speculative purchases in view of the revival of trade after the war; the gradual rise in the price of raw cotton, and the diminished cost of coal. The returns recently received show that the total number of spindles was only a single unit short of five lakhs and 19 thousand, or rather more than one-fifth of the nominal number for the entire Bombay Presidency. The average period during which the mills were working in the month was 27 days, and the average time the mills were kept open per diem was 22½ hours. The Far Eastern mills resemble those of British India in the class of work manufactured, which do not come into competition with the high counts of Lancashire. The total number of hands employed was 9,068 men and 28,494 women, a disproportion which should be carefully noted in Bombay, and which is to be accounted for by the fact that while the average rate of pay for the male operative is 18.05c., that of the women is 9.83c.

"New mills are being erected in Japan, and there are not wanting indications of similar enterprises being undertaken in China when circumstances are favorable. Whether Chinese or Japanese capital is employed in the erection of these mills, it is quite certain that their working will largely, if not entirely, be superintended by the Japanese. The Chinese is a very steady-going and industrious workman, but he has no head for the organization of a large industry, and would be utterly at a loss in managing a mill. He will, therefore, call in the aid of his Eastern neighbor,

and the mills will be worked under Japanese supervision, but with Chinese labor, a combination insuring very cheap production, against which the Bombay mill-owner will find it hard to compete. To the cotton merchants in India the outlook is less serious, as there are not many parts of China where the soil is adapted for cotton growing excepting of a very coarse kind, and in Japan the area available for cultivation is necessarily mainly absorbed in the production of rice and other foodstuffs, to meet the demands of a growing population. It may, therefore, be safely assumed that the Far East will continue to indent largely on India for its supplies of raw cotton unless Japan is reached by the American markets on equally good terms.

"This being so, it is rather disquieting to learn that a line of steamers is shortly to be established to run between Khobe and Yokohama and Mexico, connecting with the Tehuantepec Railroad, and thus with the gulf or cotton states. The line will be worked under the auspices of the Osaka Cotton Spinning Association for the express purpose of bringing the raw material direct from America, and it is stated that definite promises have been obtained of a subsidy from the Japanese government. Besides cotton, it is expected that iron will be brought from a mine in the northern part of Mexico, which, on the authority of an analysis made by an English firm, is said to contain ore of superior quality. It is believed that paying return cargoes to Central America of Japanese staples will be forthcoming after the line has been in working order for some time, but the main object in view appears to be the direct importation of cotton. It is clear, therefore, that the prospects of the Bombay cotton trade with the Far East are the reverse of cheering, and it behooves the local merchants to give very earnest attention to the situation, with a view to seeing how far it is possible to legitimately counteract the existing tendency. Another threatened industry in which Bombay is interested, inasmuch as it is financed in that presidency, is the export of Persian opium to Formosa, to supply the wants of the Chinese inhabitants, who number about two millions. The importation of opium to Japan is strictly forbidden, and the Mikado's government have, after careful consideration, decided that the prohibition shall also apply to the recently acquired island of Formosa, on the ground that the Japanese on the island might adopt the opium habit. The result of this interdiction will be the cessation of a trade financed in Bombay, the total value of which is considerable."

SHIPBUILDING IN 1895.

"Lloyd's Register of British and Foreign Shipping" shows that during 1895, exclusive of war ships, 579 vessels, of 950,967 tons gross (viz., 526 steamers, of 904,991 tons, and 53 sailing vessels, of 45,976 tons), were launched in the United Kingdom. The war ships launched at both government and private yards amounted to 59, of 148,111 tons displacement. The total output of the United Kingdom for the year was, therefore, 638 vessels, of 1,099,078 tons. In the following notes war ships are excluded from consideration, except where they are specially mentioned.

The output of the year in the United Kingdom was less than that of 1894 by over 95,000 tons, but the proportion of steam tonnage to the total tonnage launched was much higher. In 1892 sailing tonnage formed no less than 24 per cent. of the output, in 1893 14 per cent., in 1894 8 per cent., and in 1895 it formed less than 5 per cent. The war-ship tonnage launched in 1895, however, exceeded that launched in 1894 by upwards of 115,000 tons displacement. If these figures be included in the comparison, the output of 1895 exceeded that of 1894 by 20,000 tons. On the basis of tonnage launched, and taking the figures for 1889 as a standard, the shipbuilding facilities of the country were utilized in 1895, as in 1894, to the extent of about seven-eighths. About 20 per cent. of the total output was built to the order of foreign and colonial shipowners. Norway provided the largest amount of work for British shipbuilders. Germany follows, and next come Russia, Spain, Denmark and Holland. Irrespective of war ships, the total tonnage under construction in the United Kingdom on December 31, 1895, exceeded by about 53,000 tons that under construction twelve months previously. The war-ship tonnage under construction in the country has risen from 95,000 tons displacement two years ago, and 260,000 twelve months ago, to 306,000 tons at the present time.

The total output of the world during 1895 (exclusive of war ships) appears to have been about 1,218,000 tons (1,114,000 steam, 104,000 sail). Lloyd's Register wreck returns show that the seagoing tonnage of all nationalities totally lost, broken up, etc., in the course of twelve months amounts to about 700,000 tons (290,000 steam, 410,000 sail). It will thus be seen that, while the sailing tonnage of the world was reduced by 306,000 tons during 1895, the steam tonnage increased by about 824,000 tons. The net increase of the world's mercantile tonnage is, therefore, 518,000 tons. Of this total the net increase in the tonnage of the United Kingdom, as given above, represents about 25 per cent. Of the new tonnage launched, however, the United Kingdom has acquired 62 5 per cent.

CHINA'S RAILROAD POLICY.

A Washington dispatch to the Philadelphia *Press* says: "Minister Denby, our representative at Pekin, has obtained some important information regarding the Chinese policy of future railroad construction. He has learned, he writes the State Department, that the Chinese government is bent on excluding foreign capital and foreign material from railroad construction throughout the empire. This policy has been determined upon despite Minister Denby's polite but earnest exposition of American facilities and enterprise. He believes, however, that the decision of the government to favor domestic capital and material cannot survive. There are certain disadvantages against which the Chinese promoters and managers may not be able to successfully operate. There is a lack of experience, and there is a growing pressure from the outside by those interested in such matters, and who wish to partake of the commercial advantages of railroad construction and control in China. There is a superstition, also, which must be dissipated before any great amount of railroad work can be done in the Chinese provinces. For instance, the road just authorized by the government, the details of which are communicated to the State Department by Minister Denby, will run from Tien-Tsin to a point within eight miles of Pekin. This inconvenient terminal is selected out of deference to a native impression that the sacred precincts of the imperial residences should not be contaminated by the unholy presence of the modern locomotive. This view will soon be dispelled, says Minister Denby, and the railroad will in a few years probably run beneath the walls of the Chinese capital."

BUSINESS FAILURES.

INVESTMENTS.

INCOME SHARES

CLASS "C" COUPON SHARES are sold at $85. per share, together with a purchase premium of $5. They pay a fixed preferred dividend of 6% per annum on the par value of $100. per share or 6⅔% per annum on the money invested.

Dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any bank.

CLASS "D" COUPON SHARES are sold at par, $100., together with a purchase premium of $10. Fixed dividend of 8% on par value or 7 27/100% on money invested. Coupons payable January 1st. Collectable through any bank.

Withdrawable after sixty days' notice, together with dividend accrued thereon.

The desirability of these shares, from which to derive a cash income, is unquestionable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 8, 1896.

The brilliant success of the new loan has not failed to attract the attention of the foreign press, which, speaking generally, hold that the outcome cannot fail to have a good influence at home and abroad. In financial circles in the United States the success of the loan has stimulated the development of an optimistic feeling which should not be without results in business circles generally. The sentiment of the people as a whole is well reflected in the resolution adopted by the New York Chamber of Commerce on Thursday, when that body expressed its sense of pride in the manifestation of the confidence of the people in the financial strength of the country, indicated by the large subscriptions to the government loan, and declared its belief that the extraordinary success of this loan should dispel every doubt as to the ability and intention of the United States government to redeem all its obligations in the best money of the world.

Instructions in regard to the receipt of gold in payment of the new bonds have been sent by the Secretary of the Treasury to the Treasurer and the Assistant Treasurers of the United States. These instructions provide that each payment of an installment should include the principal, premium at the price named in the bid, and accrued interest from February 1, 1896, to the date of payment, so that the proportionate amount of the bonds representing the installment will be paid for in full. For these payments certificates of deposit will be issued in duplicate, with instructions to the depositors to retain the duplicates and to forward the originals to the Secretary of the Treasury, accompanied by letters from the depositors giving complete information as to the kind and denominations of the bonds desired and the place of their delivery. The bonds will be issued only upon receipt by the Secretary of the original certificate of deposit. Any depositor may assign the original certificate issued in his name, in which case the bonds will be issued upon the order of the assignee. If it should be deemed advisable to postpone the receipt of deposits on this account beyond the dates fixed in the circulars, special instructions by telegram or letter will be given the Assistant Treasurers.

Just at present the Senate has under consideration a proposed change in it's rules which aims to distribute most of the appropriation bills among the several committees of the Senate. The matter has come up on a resolution introduced two months ago, taking from the Committee on Appropriations jurisdiction of all appropriation bills, except those for legislative, executive and judicial expenses, for sundry civil expenses, and for all deficiencies. The proposition has, naturally, been energetically opposed by the members of the committee, which will be shorn largely of its importance if the resolution should be adopted. The main argument against the change is that the distribution of the control of appropriations will tend to increase expenditures, butt he advocates of the change say that so far as it has been introduced in the House it has worked well.

The House Ways and Means Committee this week adopted a resolution providing for an inquiry into the status of the commercial treaties and agreements of the United States particularly in relation to foreign discriminating restrictions. The resolution providing for the inquiry recites that it is desirable to foster and extend the export of the surplus agricultural and manufactured products of the United States to foreign countries, and that in certain countries the importation of these products is prohibited or restricted and subjected to burdensome inspection, intentional overvaluation or discriminating duties, and provides that the Committee on Ways and Means be directed to submit to the House a report which shall show in what countries such restrictions, regulations or discriminations are in force, of what they consist, the causes alleged therefor, their effect upon our foreign commerce, and the effect of the commercial treaties or agreements with foreign countries entered into after October 31, 1890, upon our trade with such countries, and also the effect of the subsequent abandonment of such treaties upon such trade.

Both houses of the New York legislature have passed the retaliatory insurance bill which was framed to meet the action of the Prussian government in relation to American companies. This bill provides that whenever it shall appear to the State Superintendent of Insurance that permission to transact business within any foreign country is refused to a company organized under the laws of New York, after a certificate of solvency and good management of such company has been issued to it by the superintendent, and after such company has complied with any reasonable law of such foreign country requiring deposits of money or securities with the government, the superintendent shall cancel the authority of every company organized under the laws of such foreign government and licensed to do business in New York, and shall refuse a certificate to every such company thereafter applying to him for authority to do business in the state until his certificate shall have been duly recognized by the government of such country. It is possible that the matter dealt with in the bill may become a subject of action in Congress, the House having adopted a resolution calling on the President for all correspondence between the United States and Germany regarding the exclusion of American insurance companies from the latter country.

The recent discovery attributed to Prof. Röntgen that solids are not impervious to the rays of a certain light promises to have important results, not only in the domain of science, but also in applications in the field of industry. Investigators almost everywhere are now engaged in experimenting in photography with the cathode rays, and forecasts of what may be expected to follow the introduction of the method in metallurgy, surgery and other departments of human activity are attracting interest. It reads almost like a fairy tale of science to learn that naval engineers, for example, expect to see the new photogaphy employed in the detection of hidden flaws in machinery on which the efficiency of ships in action is dependent, and in studying the mysterious inner workings of boilers and other machinery.

A cable dispatch from Berne announces that the Swiss Federal Council has decided that the President of the Confederation may nominate an arbitrator in the dispute as to sealers' claims growing out of the Behring sea controversy between the United States and Great Britain, in accordance with an agreement between the governments of the two countries. This announcement has attracted attention to the conditions of the treaty of arbitration negotiated in November last by Secretary Olney and Sir Julian Pauncefote. According to a Washington dispatch, the treaty provides for a court to examine and report upon the merits of claims of Canadian sealers for illegal seizure by the United States and the amount of damages that should be paid therefor. It is said to have been accepted by Great Britain with the concurrence of the Canadian Dominion, but needs the ratification of the United States Senate before it can take effect. The action of the Swiss Federal Council is based upon a provision to the effect that a third member of the court of arbitration should be appointed by the Swiss government. The delay in transmitting the treaty to the United States Senate for ratification has been caused in part by the delay of Switzerland in formally accepting the responsibility, although it is understood that no doubt ever existed that such acceptance would be forthcoming.

A proclamation has recently been issued by the Imperial Japanese government at Tokio opening Formosa to foreign commerce, and the contents of the document have been communicated to the Secretary of State. The proclamation provides that order and tranquility having been established in the island, the subjects and citizens of powers having commercial treaties with Japan may reside and trade in Formosa at Tamsui, Keelung, Anping, Taiwanfu and Takao, and the vessels of such powers may visit and carry cargo to and from the ports and harbors of Tamsui, Keelung, Anping and Takao. The proclamation further declares that notwithstanding the exceptional condition of affairs in Formosa, the treaties of commerce and navigation, and the tariffs and arrangements existing and now in force between Japan and the other powers are, so far as they are applicable, extended to the subjects, citizens and vessels of such powers being in or resorting to Formosa, it being at the same time understood that all persons availing themselves of the above enumerated facilities shall obey all decrees and regulations which may at any time be in force in Formosa. It is understood that consular agencies will be established by the United States at the new open ports, provision having been already made for one at the last mentioned port, Takao.

An account of the financial condition of Nicaragua is given in some extracts from the annual message of the President of that republic, sent to the State Department by United States Minister Baker. The President, who found a large deficit in the treasury when he assumed office, now reports that he has paid off a considerable portion of both the foreign and the domestic debt, and that at the rate at which he has been paying it the republic would be free of debt inside of three years. It is not proposed, however, to keep on extinguishing the debt, but instead to apply the surplus receipts to the building of a railroad to connect Lake Nicaragua with the Atlantic at Rama, and there to connect with steamers to the United States and Europe, which is expected to do much to develop the commerce of the country.

THE SUCCESSFUL BOND SUBSCRIPTION.

The eagerness of the financial public to subscribe for the new United States 4 per cent. loan seems to have been decidedly underestimated. Such would be the conclusion suggested by the enormous volume of tenders for the new bonds which were opened at the Treasury Department in Washington on Thursday last. The total amount of bids made was no less than $568,269,850, from nearly 4,700 separate bidders. Thus the $100,000,000 composing the issue was subscribed for more than fivefold, rendering the operation the most successful one of its kind in which the Treasury of the United States has ever engaged.

Such a result does not seem to have been hoped for, either at Washington or in financial and speculative circles. It is therefore natural that the unexpectedly successful issue of the transaction should have had a decidedly stimulating effect upon the financial market, as will be seen by reference to our regular reports upon those heads. As late as last Tuesday or Wednesday the prevalent estimate among financial houses in this and other cities was that the aggregate bids might amount to more than the amount called for, but even in making up these figures a certain stress was laid upon the expected participation by syndicates, which were known to be in process of formation, of various foreign bankers, the decline in exchange rates noted in BRADSTREET'S of last week being held to indicate that interests of this character were making preparations on this side of the ocean for participation in the subscription. Nor was it generally believed until the subscriptions were opened that the prices obtained for the bonds would be in the average so high as those actually secured. After the disruption of the Morgan syndicate early in January, a general impression prevailed that the government might be forced to accept a relatively low price for the new bonds. It was estimated in the first instance that the best that could be hoped for from the large bidders who might be expected to absorb the bulk of the issue would be between 107 and 108, at which figures the bonds, calculating interest to maturity, would be taken upon an income basis of from 3¾ to 3½ per cent. In this respect, too, the actual outcome has outstripped the most sanguine anticipations. The highest bid opened on Thursday was 119.3229 for $10,000, and from this the prices grade down to 110 and a fraction, the great bulk of the large offers from institutions and bankers being made at between 110 and 112, that of the syndicate formed by Mr. J. P. Morgan, to which the largest single allotment will doubtless be made, being at 110.6877 for $100,000,000 of the bonds, while the tender of the United States Trust Company of New York, or, as it was called, the "Stewart syndicate," was 110.075 for $76,000,000. At the latter price the income derived from an investment in the bonds would net about 3.5 per cent., and under the Morgan bid the yield on an actuarial computation is fractionally less. According to the available calculation in regard to the allotment of the issue to the Morgan syndicate and the bidders at higher prices, the average price realized by the government for the entire amount of bonds may be regarded as very favorable.

The closing of the loan, it will be seen, has been productive of a great many surprises. The price and the amount of the bids have already been spoken of. The character of the bidding is also worthy of mention. It was certainly not expected that such a large volume of individual bids should have been put in, not only from banks and institutions all over the country, but from private investors as well. The published lists of the bids also indicate that in many cases offers of this kind were made at high figures, affording evidence that they came from interests which desired to obtain the amount of their application as permanent investments.

No little comment has been made in the public press regarding the participation of the two syndicates to which reference has been made in a preceding paragraph. It was known for some little time in advance that the United States Trust Company of New York and its president, Mr. John A. Stewart, had been moving in the matter of securing as large a subscription to the new issue as possible. Mr. Stewart's connection with former bond issues, and his uniformly active participation in all efforts to assist the Treasury, are matters of public record. In this instance it is known that the institution of which he is the head took the lead in securing the coöperation of a very large number of leading banks, bankers and private investors in New York and other cities, the understanding being that the Trust Company would name the price for the total amount of the bids put in through its instrumentality. It is further understood that the amount of $76,000,000 bid for by Mr. Stewart and his associates did not represent the entire sum which that syndicate applied for, considerable bids being put in in individual names. The participation of Messrs. J. P. Morgan & Co., at least through the form of a syndicate, was, however, entirely unexpected. A bid of $100,000,000, or any part thereof, was, however, submitted by Mr. J. P. Morgan on behalf of his own firm, in conjunction with the National City Bank, of New York, the Deutsche Bank, of Berlin, Germany, and Messrs. Harvey Fisk & Sons, of New York, in equal proportions.

BULLISH WORLD'S WHEAT STOCKS TOTALS.

Details of stocks of wheat available, both coasts of the United States, together with those in Canada, on February 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
February 1, 1896.....	97,592,000	5,889,000	103,481,000
February 1, 1895.....	106,917,000	13,118,000	120,035,000
February 1, 1894.....	99,596,000	9,859,000	109,455,000
February 1, 1893.....	107,255,000	6,457,000	113,712,000
February 1, 1892.....	66,544,000	6,023,000	72,588,000
February 1, 1891.....	44,258,000	10,693,000	54,951,000
February 1, 1890.....	49,691,000	6,144,000	55,835,000
February 1, 1889.....	47,414,000	4,413,000	51,828,000
February 1, 1888.....	70,214,000	14,000,000	84,214,000

The world's totals of stocks of wheat on February 1, 1896, present a more bullish aspect as to the future of the price of that cereal than for several months. This is due not so much to the falling off of available supplies in the United States as to restricted takings by Europe and the recent shrinkage of reserves, both on the continent and in the United Kingdom.

In the United States and Canada, both coasts, the falling off in total supplies February 1 as compared with last year shows a shrinkage of only a little in excess of 16,000,000 bushels, about 13 per cent., but the total held, as described, on the 1st instant was only 103,481,000 bushels, as contrasted with 120,035,000 bushels one year ago, with 109,455,000 bushels on February 1, 1894, and as compared with 113,712,000 bushels on February 1, 1893. On the corresponding date in preceding years the range of total stocks of wheat in the United States and Canada, both coasts, was from a total of about 52,000,000 bushels to 72,000,000 bushels, and to 84,000,000 bushels.

While it may be urged that, notwithstanding the sharp falling off in available stocks in this country and Canada compared with three preceding years, the total still shows a large excess as compared with the total held on February 1 in years prior to 1893, the fact must not be lost sight of that of recent years much larger proportions of the wheat crop each year have been shipped to market during the first half of the season than formerly.

The least bullish feature of the movement of the domestic and Canadian wheat crops is that for January. The net falling off in the quantity available east of the Rocky mountains last month was only 157,000 bushels, as contrasted with the enormous decrease in January, 1895, of 6,790,000 bushels. For seven months of the cereal year ended January 30, 1896, the net decrease in available wheat supplies in the United States and Canada, east of the Rocky mountains, is only 44,267,000 bushels, as compared with 55,247,000 bushels in the like seven months in the preceding cereal year, but is much heavier than the corresponding falling off in the cereal year 1893–94.

The seven months' decrease in available wheat stocks on the Pacific coast, amounting to 1,794,000 bushels, is in surprising contrast to the corresponding decreases there in preceding years, the falling off for seven months in 1894–95 having been 5,233,000 bushels, and in 1893–94 8,741,000 bushels.

The net decrease in available wheat stocks in the United States and Canada, both coasts, during the seven months under discussion is 46.061,000 bushels, whereas in the like period in the preceding cereal year the falling off was 60,480,000 bushels, and in the year before that it was 34,963,000 bushels.

The total quantity of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on February 1, added to available stocks in Europe, as reported exclusively to BRADSTREET'S, is as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
Feb. 1, 1896..	97,592,000	5,889,000	56,944,000	160,425,000
Feb. 1, 1895 .	106,917,000	13,118,000	61,384,000	181,419,000
Feb. 1, 1894 .	99,596,000	9,859,000	74,472,000	183,927,000
Feb. 1, 1893..	107,255,000	6,457,000	64,376,000	178,088,000
Feb. 1, 1892..	66,544,000	6,043,000	82,720,000	155,308,000
Feb. 1, 1891..	44,258,000	10,693,000	50,136,000	105,087,000
Feb. 1, 1890 ..	49,691,000	6,144,000	49,728,000	105,538,000
Feb. 1, 1889..	47,414,000	4,413,000	67,632,000	119,459,000

Grouping stocks of wheat afloat for and in Europe with total stocks available in the United States and Canada, the grand total for February 1 this year is found to be 160,425,000 bushels, about 21,000,000 bushels less than on February 1, 1895, nearly 24,000,000 bushels less than on the corresponding date in 1894, nearly 18,000,000 bushels less than were held on February 1, 1893, but 5,000,000 more than were held on February 1, 1892.

Contrasting the European, American and afloat total of wheat on February 1, 1896, with corresponding totals, it is found to be nearly as small as the like aggregate as late as April 1, 1895.

The increase in available wheat stocks in the United States last autumn began later than usual, and naturally the weekly decreases, which usually appear promptly in the first week in January, and occasionally a week or two earlier than that, did not make themselves apparent until nearly the middle of last month. Should supplies of wheat in the United States and Canada run down as rapidly between now and July 1 as they promise to, that will prove, taken in connection with totals abroad, an exceptionally bullish influence.

In 1893 the decline in the American, Canadian, European and afloat stocks of available wheat between February 1 and July 1 was 26,000,000 bushels; in the corresponding period of 1894 the decline was 37,000,000 bushels, and in the like portion of 1895 it was 50,000,000 bushels, the average of which is of about 38,000,000

TOTALS OF AVAILABLE WHEAT IN THE UNITED STATES, CANADA AND EUROPE AND AFLOAT FOR EUROPE.

* Decrease. † Increase.

bushels during the five months in question in the last three years. Should the decrease amount to only the average of the past three years during the next five months, the so-called world's stocks of available wheat on July 1 next are likely to be the smallest since 1892, and may approximate the comparatively small total held in the year last named.

Beerbohm's special cable to BRADSTREET'S this week announces the final official Russian report, that the wheat crop of the empire will be 80,000,000 bushels less than in 1894, and that the rye crop, the principal food product there, is 115,000,000 bushels smaller, which means reduced supplies to wheat-importing countries from Russia, as well as from Australia and India.

For months past wheat afloat for Europe from all sources has been decreasing, which is in sharp contrast to the increasing totals afloat a year ago up to the month of May. Moreover, the United Kingdom is reported to require 24,000,000 bushels more to be imported than at the corresponding period a year ago, unless it is to intrench upon its reserves.

JANUARY'S REACTION IN BANK CLEARINGS.

January bank clearings reflect the reaction from the activity of last fall in a total smaller than for any of the three preceding months, but compared with January one year and two years ago a perceptible gain is shown, the increase over a year ago being encouraging, because that month, in turn, showed a gain over January, 1894.

The total bank clearings at 68 cities for January aggregate $4,580,030,917, an increase over the total for January a year ago of 4.8 per cent., and an increase over January two years ago of nearly 13 per cent. Compared with January, 1893, which was almost high-water mark, there is a decrease of nearly 23 per cent.

The showings made by the various groups of clearing house cities during January compare with preceding months as follows:

	Sept.	*Oct.*	*Nov.*	*Dec.*	*Jan.*
New Engl'd.	Inc. 16.3	Inc. 18.5	Inc. 14.1	Inc. 9.8	Dec. 2.5
Middle	Inc. 24.8	Inc. 27.8	Inc. 16.3	Inc. 22.7	Inc. 6.8
Western	Inc. 7.5	Inc. 13.2	Inc. 6.4	Inc. 4.0	Inc. .3
Northwestern	Inc. 2.2	Inc. 7.9	Inc. 5.3	Inc. 9.4	Inc. 3.7
Southwestern	Inc. 7.3	Inc. 10.3	Inc. 7.0	Inc. 5.1	Dec. 1.8
Southern	Inc. 6.0	Inc. 23.8	Inc. 10.0	Inc. 10.3	Inc. 6.2
Far-western	Inc. 1.5	Inc. 6.5	Inc. 11.8	Inc. 13.4	Inc. 11.3
Totals	Inc. 18.4	Inc. 22.4	Inc. 13.6	Inc. 17.6	Inc. 4.8
Canada	Inc. .6	Inc. .9	Inc. 8.0	Inc. 20.0	Inc. 1.8

From the above it will be seen that decreases from a year ago are reported in the New England and southwestern groups. Increases, too, are of smaller volume than for some months past, and, of course, this tendency is likely to become more manifest as comparisons with last year's large monthly totals continue.

Of the 82 cities which furnish comparisons for two years 26 show decreases, about one-third of the whole number. Nearly one-third of the decreases are to be found in the southwestern group, of which 9 out of 10 report a falling off from a year ago. The exception to this general decrease is Kansas City.

Another group showing a decrease is that of New England, where 3 of the 10 cities reported (one of the 3 being Boston) show a falling off. In the western group 4 decreases are shown, Cincinnati and Louisville being noticeable in this respect. In the northwest 4 cities and in the southern group 3 cities show a falling off, New Orleans, Richmond and Jacksonville being among them. Of the large cities showing decreases the heaviest falling off is that reported by Cincinnati, 12 per cent. St. Louis shows a decrease of a little more than 5 per cent., Boston 3.6 per cent., and New Orleans a decrease of a fraction of 1 per cent.

Among the large cities showing gains, the most notable is Minneapolis, with an increase of 41 per cent. Next in importance is St. Paul with nearly 20 per cent. increase, Pittsburgh with 17.4 per cent., and Omaha, Cleveland and Kansas City with increases respectively of 12.3 per cent., 12 per cent. and 11.6 per cent. New York city shows an increase of 7 per cent., Detroit and San Francisco of 8 per cent. each, and Indianapolis of 9.9 per cent. Among the smaller increases are those at Milwaukee, 4 per cent.; Philadelphia, 3.4 per cent., and Chicago, 1 per cent.

In the tabular exhibits accompanying this article are to be found as features exclusive with BRADSTREET'S reports of bank clearings, comparative monthly totals at all cities reporting them for four years and comparative monthly grand totals of clearings for thirteen years past. It is only by considering these data over extended periods of time that their really great value can be appreciated.

BANK CLEARINGS AT 87 CITIES FOR JANUARY, AT 82 CITIES FOR THIS YEAR AND LAST, AND AT 75 CITIES FOR FOUR YEARS.

THE CONDITION OF THE TREASURY.

The aggregate of the public debt of the United States on January 31 was, according to the Treasury statement, $1,687,180,788. This total included certificates and Treasury notes offset by an equal amount of cash in the Treasury, amounting to $562,542,773. The aggregate of interest-bearing and non-interest-bearing debt amounted to $1,124,638,015, which represents a net decrease for the month amounting to $687,446.50. The certificates and Treasury notes show a decrease of $5,480,900.00, and by classing these as debt a net decrease is shown. The gold holdings of the Treasury amounted on January 31 to $99,693,356.57 and the silver holdings to $505,421,818.68. The gold reserve had fallen on that date to $49,845,507 and the net cash balance amounted to $121,746,271.27, leaving an aggregate cash balance in the Treasury at the end of the month amounting to $171,591,778.27. This represents a decrease of $6,435,423.65 for the month.

The government receipts for the month of January amounted to $29,237,670.21, which represents an increase of not far from $3,000,000 as compared with the preceding month, and over $1,400,000 as compared with the corresponding month of last year. The internal revenue receipts, which exceeded those from customs in December last, fell below them in January by more than $5,300,000, but the disproportion between them is less than it was in January of last year. The expenditures for the month amounted to $32,529,340.65, which represents an increase of over $6,700,000 as compared with December last, but a decrease of nearly $2,000,000 as compared with January, 1895. The main item of increase as compared with last month is interest, the increase under which amounted to over $6,600,000, or nearly enough to account for the entire difference between the figures. There were other increases and decreases which about offset one another.

For the seven months of the fiscal year ending with January the receipts amounted to $196,805,724.14, which represents an increase of over $9,600,000 as compared with the corresponding period of the preceding fiscal year. There was an increase of nearly $11,700,000 under the head of customs as compared with the seven months of the fiscal year 1894–95, and an increase of over $1,100,000 in miscellaneous receipts, but the internal revenue receipts showed a decline of over $3,200,000. The expenditures for the seven months amounted to $215,492,101.63, which represented a decrease of nearly $6,000,000 as compared with the corresponding period in the preceding fiscal year. The principal item of decrease was the expenditure on civil and miscellaneous accounts, where the falling off

was over $6,000,000. There was an increase of over $1,000,000 in the expenditures for the War Department, of nearly $700,000 for Indians, and of nearly $2,500,000 for interest, while there were decreases of over $3,000,000 in expenditures for the navy, and of over $1,000,000 for pensions. The disproportion between receipts and expenditures is less than it was at the corresponding date last year, for while at the end of the first seven months of the fiscal year ending June 30, 1895, the expenditures exceeded the receipts by over $34,000,000, the excess on January 31 was only about $18,600,000.

BANKING AND OTHER FINANCIAL FAILURES.

No other exhibit thus far made public more faithfully represents the unsatisfactory character of general trade in 1895, compared with what had been anticipated, than other accompanying statements with reference to suspensions and failures of banks and kindred institutions. No other compilation of this valuable information exists. Reports of embarrassments of national banks are prepared and published by the Comptroller of the Currency annually, but the statements of failures of other than national banks appearing in the government publication are prepared expressly for it by BRADSTREET'S.

SUSPENSIONS AND FAILURES OF BANKS, BANKERS AND TRUST COMPANIES IN 1895, 1894 AND 1893, AS REPORTED TO "BRADSTREET'S."

Totals	125	87	598	$11,833,069	$10,141,632	$184,281,014	$15,108,010	$12,605,950	$170,295,678

As the fiscal year of the report in question covers the months from September 1 to August 31, there is less satisfaction in comparisons for such periods than for calendar years, particularly when it is desired to view the list of failures of financial institutions in the light of the trend of trade.

It will be kept in mind that failures of banks and bankers are classified differently from ordinary mercantile and industrial failures. While the latter are those in which actual assets are less than gross liabilities, financial institutions are held to have failed when they have been unable to meet every legal obligation for no matter how brief a period—in short, for ever so brief a suspension of payments. This distinction between what constitutes financial and industrial or financial and mercantile failures is necessary because of the difference in the function performed by a bank and that by a merchant or manufacturer. Either of the latter may fail without drawing down a community of interests after him. But not so with a bank. The latter is a medium by which trade and manufacturing are conducted, and must be held to an accounting as to its ability to meet its engagements to the entire business world in a sense which may not be held to apply to the manufacturer or merchant.

In the longer table it will be noted that the comparisons cover 1893 and the two years succeeding it—an interesting period. Attention is attracted by the fact that in contrast with the 598 banking embarrassments in 1893, the corresponding total in 1894, a year of exceptional depression in business, is only 87; while last year, when there was a trade revival from March to September, succeeded by a decline in demand and prices, the number of banking embarrassments showed an unexpected increase, 125 as compared with the 87 in 1894.

In 1893 the largest number of banking embarrassments reported in any one group was among private banks, 196, from which the drop the following year was to 18. Last year the total was more than twice as large as in 1894, viz.: 37.

The next largest group of bank failures in 1893 was among state institutions (exclusive of savings banks), 184, from which the total dropped to 36 in 1894, but increased last year to 57.

Third in order among the groups of bank failures in 1893 were the national banks, 154. In 1894 there were only 24, and in 1895, the calendar year in every instance, only 21—fewer, it will be noted, than in 1894—as compared with an increase in state banks last year of more than one-half, and of private banks of 100 per cent. over 1894.

As compared with 50 savings banks which closed their doors in 1893, only 6 were reported in 1894, but there were 8 such embarrassments reported last year. The course of failures among loan and trust companies appears to have followed the line of the wave of embarrassment with national banks, there having been 14 in 1893, only 3 in 1894, and 2 last year.

Of even more significance than the number of banking embarrassments in the various classes is the fact that the liabilities of embarrassed state banks show a marked increase, nearly 50 per cent. more in 1895 than in 1894, while liabilities of embarrassed savings banks were 73 per cent. more than in the year before, and those private banks about 50 per cent. more.

In contrast with this, total liabilities of 21 national banks embarrassed last year are about 10 per cent. smaller than the year before, and of loan and trust companies total liabilities of those embarrassed last year were not more than 16 per cent. of the corresponding total the year before.

SUSPENSIONS AND FAILURES OF BANKS (AND OTHER FINANCIAL INSTITUTIONS) IN 1894 AND 1895, AS REPORTED TO "BRADSTREET'S."

	—*No.*—		—*Assets*—		—*Liabilities*—

A supplementary tabular exhibit, covering the calendar years 1895 and 1894, includes a portion of that which has been outlined, but with a statement as to failures and suspensions of bankers and brokers, mortgage and investment companies and building and loan associations.

WEALTH AND FINANCE STATISTICS FOR A CENTURY.

In the last bulletin of the Department of Labor there are presented some statistics of interest regarding the wealth and receipts and expenses of the United States for the census years from 1800 to 1890, inclusive. These statistics are based upon census figures, and in the form in which they are presented they are not intended to develop details, but rather to present a comprehensive showing of the general changes in the wealth of the country and in the receipts and expenses of the government. The total true valuation of real and personal property amounted in 1890 to $65,037,091,197. The total value of the products of industry, which include manufactures and farm, fishery and mineral products, amounted to $12,148,380,626. The total revenues collected during 1890 by the federal, state and local governments were reported at $1,040,473,013, and the expenditures at $915,954,055, the receipts exceeding the expenses by $124,518,958, of which amount the excess in the transactions of the federal government, including postal service, amounted to $108,936,066, leaving $15,582,892 as a surplus arising from the financial transactions of the state and local governments. The total debt of the country, federal, state, county, parish, municipal and school district, including the debt on irrigation districts in California and fire districts in Massachusetts, amounted to $2,027,170,546.

Comparisons with earlier dates as regards these items is somewhat difficult, for the reason that complete statistics for the earlier years are not available. An approximation, however, is reached in the statistics given since 1850, when the wealth of the country was put at $7,135,780,228, and the value of manufactures, fishery and mineral products was put at $1,029,106,798. The wealth of the country had increased in 1860 to $16,159,616,068, and the value of the products enumerated heretofore amounted to $1,898,785,768. By 1870 the wealth of the country had grown to $30,068,518,507. The figures for 1850 and 1860 did not include the value of farm products. This value does appear in the statistics for 1870, which give a value for manufactures, farm, fishery and mineral products of $6,843,559,616, the value of the farm products at this census being made to include betterments and additions to stock. By 1880 the wealth of the country had grown to $43,642,000,000, and the value of manufactures and other products grouped with them was estimated at $7,974,097,413. In these statistics, it may be remarked, certain duplications in the figures for manufactures as published have been eliminated. Finally, in the statistics for 1890, which have been referred to above, certain manufacturing industries not fully enumerated in prior censuses are not included, a fact which must be borne in mind when using the statistics for general purposes of comparison.

Because of the lack of some statistics and the discrepancies existing in others in relation to wealth and the products of industry, the writer of the article in the bulletin, Mr. William M. Steuart, says that percentages based on the figures for 1850 and 1860 for those products cannot be used as indicating exact increases in comparison with the figures for subsequent years. He presents calculations, however, to show that for the decade ending with 1860 the wealth of the country had increased by 126.46 per cent., and the value of the products of industry by 84.51 per cent. For the decade ending in 1870 the percentage of increase was 86.07 per cent. for wealth and 260.41 per cent for the products of industry. For the decade ending with 1880 the increase was 45.40 per cent. for wealth, but only 16.52 per cent. for the products of industry, a proportion which was changed very materially in 1890, the increase for the decade ending in that year being 49.02 per cent. for wealth and 52.35 per cent. for the products of industry. From calculations presented in the paper as to the amount of wealth per capita, it appears that there has been a marked and constant growth since 1850, the amount per capita in that year being $307.68. This amount increased to $513.93 in 1860, $779.82 in 1870, to $870.13 in 1880, and to $1,036.01 in 1890. The increases in the value of the products of industry, while not so regular, have yet been pronounced, the figures rising from $44.37 in 1850 to $193.90 in 1890.

A very interesting table compares the receipts and expenses of the federal government per capita over the period ranging from 1800 to 1890. From this table it appears that the average annual receipts amounted to $1.28 per capita for the decade ending in 1800. The amount increased rapidly to 1820, for the decade ending in which it had grown to $2.19 per capita. The decades ending in 1830 and 1840 witnessed a falling off from the figures of 1820, and by the decade ending in 1850 the amount per capita had fallen below even the figures for the decade ending in 1800, amounting to only $1.17. For the decade ending in 1860 there was an increase to $1.92 per capita. The immense expense entailed by the civil war is responsible for the marked increase in 1870, the average annual receipts per capita for the ten-year period ending then reaching the sum of $7.89, and for the decade ending in 1880 there was a decrease to $6.63, and a still further decrease for the decade ending 1890, the per capita receipts for which amounted to $5.93 per annum. The average annual expenditures seem, on the whole, to have followed the increase and decrease in receipts. They amounted to $1.29 per capita in the decade ending in 1800, and after, like the receipts, reaching a comparatively high point in 1820, they fell off again, and by the year 1850 they amounted to only $1.39, or 10c. per capita in excess of those for 1800. An increase is recorded for the decade ending in 1860, but naturally the highest point was reached in the decade ending in 1870, when the expenses per capita reached the large sum of $13.76, owing, of course, to the outlay occasioned by the civil war. For the decade ending in 1880 the expenses fell off to $5.60, and still further declined during the last decade, ending in 1890, to $4.28.

With a view to arriving at a comparison which will in some degree represent normal conditions, the author of the paper selects the totals for 1860 as showing the conditions prevailing during the decade immediately preceding the civil war, and those for 1890 as indicating those prevailing during the decade after the direct effects of the war had disappeared. From a comparison of the figures for the two years it will be seen that the total wealth per capita increased from $513.93 to $1,036.01, or 101.59 per cent., and the per capita value of the products of industry increased from $60.39 to $193.99, or 221.23 per cent., while the receipts per capita of the government increased from $1.92 to $5.93, or

208.85 per cent., and the total expenses increased from $1.91 to $4.28, or 124.08 per cent. The actual increase per capita in expenses was $2.37, of which increase the ordinary expense constituted $1.31, an increase of 19.87 per cent., while the extraordinary expenditures increased by $2.06, or 588.57 per cent. One of the largest items entering into the extraordinary expenses of 1890 is pensions. If this item were excluded the extraordinary expenses per capita would be reduced to $1.29, which would give an increase over that of 1860 of 268.57 per cent. The showing would not be complete without a reference to the distribution of the burden of the national debt during the decades from 1860 to 1890 inclusive. For the year ending in 1860 the per capita debt burden was $1.91; in 1870 it had increased to $60.46, falling off to $38.27 in 1880, and finally declining to $14.22 in 1890. The extraordinary range in the figures relating to the debt is, of course, due primarily to the conditions growing out of the civil war.

CIRCULATION ON THE INCREASE.

The Treasury statistics of circulation show a net increase of $10,513,883 for the month of January. There were two marked items of increase, namely, gold coin, which showed a gain of $14,534,139, and United States notes, which showed an increase of $14,889,967. All the other items showed decreases, but these were for a much smaller amount, the largest item of decrease being one of $5,505,584 in Treasury notes. Other decreases were $4,462,309 in silver certificates, $3,566,939 in national bank notes, $2,576,251 in standard silver dollars, $2,680,000 in currency certificates, $88,590 in gold certificates, and $30,550 in subsidiary silver. The statement showing the changes in money and bullion in the Treasury during the month shows a decrease in United States notes corresponding with the increase in circulation shown above, and decreases of $14,352,377 in gold bullion and of $37,403 in silver bullion. The other items show increases, that in gold coin amounting to $847,027.

In the following table are shown the total stock of money coined or issued, and the amounts in the Treasury and in circulation respectively:

	General stock, coined or issued.	*In Treasury.*	*Amount in circulation Feb. 1, 1896.*
Gold coin	$583,488,105	$84,225,419	—$499,262,686
Standard silver dollars	423,289,629	366,659,953	+56,629,676
Subsidiary silver	78,573,872	14,186,737	+64,387,135
Gold certificates	49,978,989	131,140	—49,847,849
Silver certificates	345,994,504	14,380,165	+331,614,339
Treasury notes, act July 14, 1890	137,324,280	27,103,095	—110,221,185
United States notes	346,681,016	100,935,176	—245,745,840
Currency certificates, act June 8, 1872	29,245,000	320,000	—28,925,000
National bank notes	213,496,547	10,409,650	+203,086,897
Totals	$2,208,071,942	$618,351,335	$1,589,720,607

The items showing increases as compared with the corresponding date last year (February 1) are national bank notes, over $4,100,000, silver certificates, over $5,000,000, subsidiary silver over $2,600,000, and standard silver dollars, over 750,000. The decreases comprised over $11,200,000 in United States notes, $8,700,000 in currency certificates, nearly $7,000,000 in Treasury notes, nearly $2,800,000 in gold certificates, and over $6,900,000 in gold coin. The total circulation shows a decrease of nearly $24,000,000 as compared with the corresponding date last year. The circulation per capita, estimated by the Treasury experts, on the basis of a population of 70,756,000, was $22.47 on February 1. This represents an increase of 11c. for the month, but a decrease of 83c. as compared with the corresponding period of last year.

The statistics of national bank circulation prepared by the Comptroller of the Currency, show that the circulation amounted to $213,407,585, which represents a decrease of $220,236 for the month, but an increase of $8,201,641 for the twelve months ending therewith. The portion of the circulation based on the deposit of bonds amounted to $190,989,637, an increase of $373,477 for the month and of $15,315,388 for the year. The portion of the circulation based on the deposit of money amounted to $22,417,948, which represented a decrease of $593,713 for the month and of $7,113,741 for the twelve months ending therewith.

RESULTS OF THE COAL COMBINATION.

Last week's agreement by the presidents of the anthracite coal roads to suspend hostilities and stop, if possible, the overproduction which has prevailed in the coal trade was regarded with great satisfaction in coal circles. It was promptly followed by a meeting of the sales agents of the various companies, who at once decided upon an advance of 25c. to 35c. per ton in the wholesale prices for the different sizes of coal, and fixed the aggregate production for the current month at 4,500,000 tons, which is somewhat of a reduction in the scale upon which the mineral has recently been mined. It is also understood that the agents, acting, it is presumed, upon instructions from their respective superiors, made some other important regulations. The chief of them had reference to contracting at low prices for forward delivery, which in the past has proved one of the most demoralizing practices in the trade. It is understood that henceforth current prices will only apply to coal taken for immediate delivery. With this, and with the general feeling in the trade that the troubles have been adjusted and that better times are in prospect, there has been a much stronger tone to the market, entirely apart from any advance in prices. It is understood that the companies are holding firmly at present to the circular prices, and there has been a stiffening all around the retail market. It must, however, be noted that the policy of the leaders of the new anthracite combination seems to be to make no vigorous effort to mark up prices. This latter course would probably be unwise, in view of the large accumulations of unsold coal. At the same time it is asserted that their efforts will be directed mainly toward keeping production within more moderate bounds, on the well-grounded belief that if the supply is not excessive the prices will adjust themselves. One instance of this afforded by the fact that the sales agents at their meeting last week adopted a circular of prices with a very moderate advance above the figures which have recently prevailed, and did not, as it was suggested they would, restore the figures at once to the higher level which was adopted in October last. The large coal companies, in fact, seem to be proceeding cautiously in this matter. As will be seen later on, there is reason for this, in the form of a possible infraction of the Interstate Commerce law and of the anti-trust legislation of the several states.

Despite the care which has been taken to avoid any difficulties of this kind, mutterings of a coming storm are already heard. The advance in anthracite prices to consumers has been too small as yet to cause any general effect. In this city, for instance, the price of white ash coal of the stove size (that most commonly used in families) has only been marked up by generality of dealers from $4.75 per ton to $5 per ton. It is, however, intimated that the Interstate Commerce Commission has had its attention called to the meeting of the anthracite railroad presidents and their agreement to divide the total production of the article upon an agreed percentage basis. What form the inquiries or possibly the action of the commission will take remains, however, to be seen. It is also hinted from Albany that the New York anti-trust law of 1893 will be invoked, and that possibly a legislative investigation of the combination and its methods and effects will be instituted.

It has already been indicated that the coal railroad presidents have framed their action and that of their subordinates with reference to attempts of this kind to interfere with their plans. Their position as understood in the trade is that there is no formal contract or combination to restrict competition in the supply of an article of common use. Their contention would be that the various companies and firms engaged in mining and shipping anthracite coal have been producing the article without any reference to the actual demands for the same, and that the combination so-called is intended merely to regulate the supply with some reference to the actual needs for consumption.

Under such circumstances it is not surprising to learn that the understanding arrived at on Thursday week with regard to the allotment of production is not a formal one. A committee is to represent the presidents as a body, and members which exceed their agreed percentage will doubtless be called on from month to month to adjust it by corresponding restriction. Herein, as in past attempts of this character, is the danger of failure to improve the condition of the trade. The echoes of the recent meeting indicate that while the basis of the allotment proposed by the committee was adopted, it was not ratified with unanimity. Some of the companies are understood to have taken the percentage awarded them as the only feasible way of putting the business on a remunerative footing. The representatives of the Lehigh & Susquehanna (Coxe Brothers) were indeed understood to have left the meeting without voting at all. That interest was awarded 3½ per cent. of the aggregate output for the time covered by the new arrangement, while in 1895 its proportion of the coal actually mined was no less than 4¾ per cent. It is indeed rumored, probably with truth, that steps have since been taken to placate Coxe Brothers, one account of the matter stating that permission to mine an amount making their output 4 per cent. of the total has been offered, the increase to be regarded as outside of the main agreement. It is also hinted that the apparent willingness of the Reading management to content itself with 20½ per cent. is due to a somewhat similar cause. The story in this case is that the Reading Company has assurances from other roads that it can produce about 21 per cent., the arrangement being made inside the main combination.

REFORMING SPECULATION IN GRAIN.

A well-known Chicago grain dealer has evolved the plan for speculative dealing which, in his opinion, as in the opinion of others who have examined it, is to prove the salvation of legitimate speculation in cereals. In other words, according to the claims made for it, it is to put buyers and sellers on an equal footing, to encourage bull speculation, discourage professional short selling, prevent the foreigner from collecting carrying charges on American grain, destroy the bucket-shop evil, and last, but not least, prevent corners.

This plan is evidently a veritable panacea for speculative evils.

A Chicago correspondent writes of it: "The new plan of trading in grain in Chicago is known as the 'Lindblom plan,' as he proposed it, and has been the chief worker for its adoption. It is practically the same as that in vogue on the New York Stock Exchange. Every bushel of wheat traded in will be delivered in twenty-four hours, the shorts borrowing warehouse receipts for delivery, just as they borrow certificates in Wall street; but the shorts, instead of selling futures at a premium over the spot price, as at present, will have to sell at the market price of cash wheat. The result will be that the bulls will only pay storage on the wheat actually in store, and not on promises to deliver in the future.

"The plan contemplates, first, the organization and incorporation of the Board of Trade cash grain depository, with a paid up capital of $1,000,000 or more, divided into 10,000 shares of $100 each.

"A governing committee, elected annually, will have charge of the affairs of the depository.

Any member of the Board of Trade in good standing may become a member of the depository by signing an agreement to abide by its rules and regulations, and the rulings of the governing committee, and by subscribing to a minimum amount of twenty shares of the capital stock of said depository.

The depository will open for business when organized, and will receive and pay for at the market price, in lots of 5,000 bushels each, and multiples thereof, from any of its members, any and all warehouse receipts for No. 2 wheat, which are then regular under the rules of the Board of Trade, receiving in return an acknowledgment from the depository that they hold a like amount of wheat for his account, but stipulating on his part that the depository may loan out the wheat to any other of its members for the space of sixty days.

Trading in wheat may be for either "cash" or "spot" delivery, in this way:

Every seller of wheat shall, between the hours of 2 and 3 o'clock of the same day, deliver to the buyer thereof an order on the depository for the amount of wheat sold (in 5,000 bushel lots) as follows: "Please deliver to bearer 5,000 bushels of No. 2 wheat, regular under the rules of the Board of Trade, at —— (closing price of day)" subject to the rules and "regulations of the depository, and charge to the account of ——." These deliveries can be made in the Exchange Hall, as now customary on delivery days, and, passing from hand to hand, will finally rest with the "longs." They shall file them forthwith with the depository, with indorsement on the orders that "this wheat may be loaned out to any other member according to the rules of the depository, to be returned within 24 hours, provided, however, that if the borrower cannot then again borrow said wheat, then said borrower shall have 60 days in which to return said wheat."

Every member of the depository shall, before 2.30 P. M. every business day except Saturdays, and then on Monday before 10.30 A. M., deposit with the depository a certified check for margins on all the wheat he is either "long" or "short" of not less than 2 cents per bushel. Greater margins must be provided at the discretion of the governing committee upon the proper notice by them, made in some public manner. Additional margins in accordance with the rules of the Board of Trade may be demanded by the governing committee.

Upon the failure of any member to provide margins as above, it shall be the duty of the manager to cause the trades of such member to be closed out in the market at earliest practicable moment, and immediately thereafter to give public notice of such default.

Sales of wheat for "spot" delivery shall be so

stipulated at the time the trade is made, and may be filled by the delivery, on the same day between 2 and 3 o'clock, of the actual warehouse receipts, or of an order on the depository (as above), except that the buyer shall not be required to loan the wheat, but will receive from the depository warehouse receipts on presentation of his order, and shall give his certified check for the same. Orders for "spot" wheat will be honored only when drawn by parties who have wheat to their credit with the depository, or, in other words, who are "long."

The depository shall pay storage in such manner as may be agreed upon with the warehousemen, and all other expenses of carrying the cash property, and shall prorate the entire expense among all the "longs," after first providing for the expense of conducting the depository, the payment of at least 6 per cent. dividend, and at least 6 per cent. per annum additional to provide a sinking fund against possible losses. The carrying charges, as assessed, shall be paid into the depository daily by the "longs" on their net holdings at the close of business each day.

It shall also be among the duties of the depository, whenever so requested by three of its members, to call for a marginal price under the rules of the Board of Trade, or the governing committee may do so at its own discretion.

"Under this system every sale has to be followed by immediate delivery, and that will enable the grain exchanges to join hands with the Stock Exchange in killing the bucket-shops, as the latter cannot deliver anything, and could be closed up by the officials with a proper law to act under. It is believed this new plan will be efficacious in uprooting the bucket-shop evil. In any event, it should stop legislation against legitimate speculation.

"The present activity in the wheat market is against any immediate adoption of the plan, and it will probably not be put into operation until next fall. In the meantime it will be presented to the other exchanges and kept before the public, that a demand for it may be fostered.

The friends of the plan think the only ones "who will suffer are the professional short sellers" and foreigners who have for years collected carrying charges in America "on grain stored somewhere else, or not stored anywhere." This is only a half truth. Neither is it clear how the plan will "encourage bull speculation" and "bring about a somewhat higher range of values," "thus benefiting the country in general." But it has good features.

"Under the present system of trading grain deliveries are to be made every thirty days, but the large trading is and has for years been confined chiefly to May, September and December. It gives short sellers the advantage, as they do not have to pay carrying charges, while the buyer is handicapped with them."

The present outlook is that this plan will be made the basis of an anti-option bill in the near future. Word is received that a number of congressmen have been in correspondence with the foster father of this revised and improved method of speculation in grain, and that they will introduce any bill favoring this particular project that may be offered them. It is even declared that some such bill will be introduced in a very short time.

THE SILVER SENATE.

Any possible doubt that might have existed as to the supremacy of the silver men in the Senate was dissipated on Saturday last, when the Senate, by a vote of 42 to 35, passed the Finance Committee's substitute for the House bond bill. The title of the bill itself was changed so as to read "to restore the coinage of silver and for other purposes." In the form in which it was passed, the bill provides that after its passage the mints of the United States shall be open to the coinage of silver, and there shall be coined dollars of the weight of four hundred and twelve and one-half grains troy of standard silver, nine-tenths fine, as provided by the act of January 18, 1837, and upon the same terms and subject to the limitations and provisions of law regulating the coinage and legal-tender quality of gold, and that whenever such coins shall be received into the Treasury, certificates may be issued therefor in the manner now provided by law. The Secretary of the Treasury is required to coin into standard silver dollars, as soon as practicable, from the silver bullion purchased under authority of the act of July 14, 1890, that portion of such silver bullion which represents the seigniorage or profit to the government, to wit, the difference between the cost of the silver purchased under said act and its coinage value. Such silver dollars so coined are to be used in the payment of the current expenses of the government, and for the purpose of making the seigniorage immediately available for use as money, the Secretary of the Treasury is directed to issue silver certificates against it, as if it was already coined in the Treasury.

The bill curtails the circulation of national bank notes by providing that no national bank note shall be hereafter issued of a denomination less than $10, and that all notes of such banks now outstanding of denominations less than that sum shall be, as rapidly as practicable, taken up, redeemed and canceled, and notes of $10 and larger denominations shall be issued in their stead under the direction of the Comptroller of the Currency. Finally, the bill provides that the Secretary of the Treasury shall redeem the United States notes, commonly called "greenbacks," and also the Treasury notes issued under the provisions of the act of July 14, 1890, when presented for redemption, in standard silver dollars or in gold coin, using for redemption of said notes either gold or silver coins, or both, not at the option of the holder, but exclusively at the option of the Treasury Department, and that such notes, commonly called "greenbacks," when so redeemed, shall be reissued as provided by the act of May 31, 1878.

This absurd and mischievous measure had been but a brief time under consideration in the House Ways and Means Committee when that body directed the chairman to report the bond bill to the House with the recommendation that that body do not concur in the Senate substitute. This action was expected, for nobody looked to see the House follow in the steps in the direction of a silver standard which the upper chamber has for some time been bent on taking. On the very same day on which this action was taken by the Ways and Means Committee of the House the Finance Committee of the Senate again displayed the ruling purpose of the majority of that body by reporting the Jones free silver bill as a substitute for the Dingley tariff bill which has been some time before it. This latter result, it is likely, was in part dictated by political considerations, the object being to prevent the tariff bill from getting before the Senate. The particular form taken by the movement, however, indicates with clearness that a free coinage majority is relied upon to prevent action upon any other measure in the interest of their pet silver scheme.

Of course, the action taken must, in any event, be resultless so long as the present conditions exist at the seat of government. It is not at all likely that the House will recede from its position to gratify the Senate, particularly in view of the fact that a presidential election will take place this year. Even if it should, however, the Senate measures must fail, for so long as President Cleveland remains in the Executive chair any such proposals will meet a sharp and energetic rebuke from him, for there is no doubt whatever as to the clearness and definiteness of his position upon the questions of finance and the currency.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.
[East of Rocky Mountains.]

Bushels week ending	1896.	1895.	1894.	1893.
January 4	+645,000	—578,000	—379,000	+1,013,526

Stocks of wheat in private elevators at St. Louis, February 1, amounted to 865,000 bushels.

The news was received by BRADSTREET'S from Beerbohm by cable on Thursday that the final official report by the Russian government makes the wheat crop for 1895 80,000,000 bushels smaller, and the rye crop 115,000,000 bushels smaller than in 1894.

In a recent address on technical education, in London, Mr. Mundella, comparing the work done in Great Britain with that done on the continent in the direction of industrial education, said that a contrast with the work done in Great Britain was presented by Germany and Switzerland, which had for nearly half a century been perfecting their system of technical education, having already trained up two generations in the most efficient manner they could afford, and having profited very largely thereby. It was a singular fact, he said, that Switzerland, a country without coal or iron and having no navigable rivers, exported manufactures to a larger value per head than was the case in England. As to Germany, the increase of her manufactures and exports had been enormous, while in steel and iron products her output had gone up considerably, while that of England had largely declined. In France, also, since M. Gambetta took the initiative in promoting improved technical education, extraordinary progress had been made. It therefore behooved Great Britain seriously to consider its position on this question. Having regard to its material resources and the wide extent of its commerce, he said, it ought to be first. Why was it that it was behind, and what ought it to do to regain its supremacy? The country must begin at the bottom and improve its elementary education. What was wanted, he said, was to raise the national idea of elementary education, to establish a system of coördination, and also such an organization of the education of the country as to prevent overlapping.

CURRENT BUSINESS NEWS.

Industrial.

An exchange says a "movement is on foot among leading negroes of Raleigh, N. C., to build a cotton mill with capital contributed by negroes and to be operated by negro labor and under negro management. We will watch this, and the similar undertaking in Alabama, with more curiosity than expectation of their success."

In his article on a proposed southern cotton exhibit at Chicago, ex-Senator Patrick Walsh points to the fact that while cotton mill capital in the south was $22,000,000 in 1880, $61,000,000 in 189-, and estimated at $110,000,000 at the beginning of 1896.

The New York correspondent of the Philadelphia *Press*, noting that the government of Chili and individual capitalists in that country are engaged in a very great development of the Chilian railway system, adds that "the Andes are to be surmounted by a railway which will connect with the great South American system which the Argentines are constructing. Another railroad is to extend northerly toward Peru. England has been very anxious to furnish the supplies, the rolling stock and the steel rails, and some lively competition between our own merchants and those of Great Britain has been going on for some time. To-day the United States won in an important competition for 12,000 tons of steel rails. The proposition was made by Chili some time ago, both in the English markets and those of the United States, for prices for these rails. Ex-Mayor William R Grace named a price, which Chili has accepted, although the figures are kept private. That is probably the largest single order given by any foreign country for American steel rails, and it is thought that it will be followed by other orders."

Commercial.

The annual live stock investigation made by the *American Agriculturist* places the aggregate value of all farm animals at $1,860,420,000, a decline during the year of $62,130,000. "This is the lowest point yet reached since the decline began in 1893, when the total value of animals on the farm was reported at $2,463,083,000, a shrinkage in three years of $662,633,000, or 25 per cent."

The Toledo *Market Report* says: "There are 2,800,000 bushels more wheat in Minneapolis and Duluth elevators than a year ago and approximately 5,000,000 bushels more now than then in interior elevators in the northwest, making a total warehouse supply now of some 7,500,000 bushels greater than one year ago. While this is so, the demands upon the supply promises to be much greater than last season, due to the large inquiry for wheat to go to the interior of other states."

A Port Townsend dispatch says that the mammoth lumber trust of the Pacific coast, known as the Central Lumber Company, of California, went into effect Saturday night. "It represents a combined capital of $70,000,000, and includes in its membership every lumber mill and all the wholesale and retail dealers, as well as the shipowners of the coast."

The Minneapolis *Market Record* says: "Facts sent out about crops by the Weather Bureau are superior in every way to the statements of the division of statistics of the Agricultural Department. If Secretary Morton would suppress it as he did the distribution of seeds, he would win the esteem of people who are not working for fluctuations in prices of cereals that are hurtful to the more necessary branches of the grain and milling trades."

A Fruit Dealers' Exchange at New Orleans has been organized. The membership takes in the fruit importers, jobbers and brokers, and thirty-five firms are represented, The organization has adopted rules applicable to Sicilian importers, relative to the opening of box fruit. All samples are now opened under the supervision of inspectors appointed by the Exchange.

The N. K. Fairbank Company report 352,884 tierces of lard in Europe and afloat therefor at Chicago, East St. Louis, Kansas City, Omaha and New York on February 1, as compared with 292,606 tierces on January 1, 1896, 198,390 tierces one year ago, and with 113,697 tierces two years ago.

The mayor of Chicago has issued an invitation to the governors of eleven southern states and to the mayors of fifty-five southern cities, asking them to send delegates to a meeting to be held in Chicago, February 19, for the purpose of organizing the proposed Southern Exposition Company.

A Washington dispatch says that the president and vice-president of the Pacific Cable Company have had a conference with two of the members of the sub-committee of the House Commerce Committee, to whom the question of a Pacific cable to Hawaii, China and Japan was referred. It was declared the cable "would be built if the government would pay a subsidy of $180,000 a year for twenty years. In return for this the government's business will be handled free for all time, and given the right of way in the matter of transmission. A second cable would be laid when the business justified."

The Minneapolis *Market Record* says: "An importance is attached to the government reports of crop conditions that is far beyond its merits. The whole country is well informed on the weather and crop prospect daily, and the monthly reports from Washington have little merit excepting their official character."

The Farmers' Alliance, after a very brief session at Washington this week, adjourned to enable its committee to go before the House Banking and Currency Committee to present an argument for free coinage.

The Chattanooga *Tradesman* says: "Recent increase in cotton speculation is bringing out a good deal of cotton, and the movement tends to encourage planters in extending the area of cotton to be worked this season. Fertilizers are in good demand, and but little credit is asked."

That Switzerland, especially the wood-working section, offers a great market for American fish glue is the information sent to the State Department by B. H. Ridgely, United States consul at Geneva. Already the article has had great success, completely ousting the material formerly used. Consul Ridgely thinks, also, that American bicycles and office furniture would sell well in Switzerland.

Financial.

The following securities were sold at auction this week at New York:

$250,000	Atchison, Topeka & Santa Fe Railroad Company general mortgage 4 per cent. bonds (Union Trust Company certificates)	74⅛%
$100,000	Atchison, Topeka & Santa Fe Railroad Company 2d mortgage Class A bonds (Union Trust Company certificates)	24%
$165,000	Atchison, Topeka & Santa Fe Railroad Company guarantee fund notes	102⅜%
$158,000	St. Louis, Kansas & Southwestern Railroad Company 1st mortgage 6 per cent. bonds	10%
25	Shares Pennsylvania Coal Company, $50 each	336%
20	Shares Equitable Gas Light Co., $100 each	207
4	Shares National Broadway Bank	243
2	Shares Bank of America	325
1,000	Shares Standard Metal Tie and Construction Company	$1 lot
5	Shares Cummings Car Works	$1 lot
700	Shares Seattle Coal & Iron Company	$1 lot
231	Shares French Mirror Plate Company	5

A document sent to the House this week by the President in regard to Behring sea forms an answer to statements that the United States had "spent more in trying to defend the right to control the seal fisheries than Alaska had been worth to it." The document shows that the government has derived, since 1876, from the seal fisheries alone, $6,351,961, and that there is a claim of nearly a million more outstanding. Including all the expenditures of policing Behring sea and for the support of the natives, and for salaries, there has been a net profit to the United States since 1876 on the seals alone of $4,658,858. Since the Canadians began their attempts to break up these fisheries the profits have vanished. Aside from the seal fisheries, there are other fisheries of great value. In his annual report Secretary Hoke Smith says that "the salmon alone taken and prepared for the market by canning or otherwise gives an annual return of $3,000,000." Gold mining has also become of great and increasing importance, and according to these official documents Alaska returns to the people of the United States in one year now almost as much as the cost of it.

A number of exchanges are giving currency to the statement that "the amount of foreign capital withdrawn from this country during the past six years is approximately estimated at $916,500,000."

The Comptroller of the Currency said this week that it would be necessary to place the Fort Stanwix, (N. Y.) National Bank in the hands of a receiver. An additional bank examiner was sent to Rome to assist in the examination of the bank's affairs.

A Chicago dispatch says "the Diamond Match Company has declared a quarterly dividend of 2½ per cent., payable March 12. Books close March 4."

According to a statement issued by the Treasury Department, the withdrawals of gold from January 6 to February 5, 1896, amounted to $16,253,678, of which $8,904,133 were for export.

"The History of Money, Banking, Stocks and Bonds, and Their Evolution from Remote Ages," published by James E. Taylor & Co., New York, for private circulation, is a condensed and useful work.

In discussing the scramble for gold among the European nations, Watson & Gibson present compilations from *L'Economiste Europeen* of the gold holdings of twenty-two large and small banks abroad, as well as the private banks of emission of Sweden and Switzerland, on December 31 of the following years: 1890, $970,900,000; 1891, $1,112,400,000; 1892, $1,232,000,000; 1893, $1,217,000,000; 1894, $1,400,000,000; 1895, $1,532,000,000. In five years these European banks have increased their holdings of gold $561,000,000. On the contrary, on December 31, 1890, the United States Treasury held net gold amounting to $148,972,000, and the New York city banks held $77,812,000 specie, a total of $226,784,000. On December 31, 1895, the Treasury held $63,262,000 net gold, and on December 27 the New York banks held $67,114,000 specie, a total of $130,376,000, or a loss in five years of $96,408,000.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 79,362 tons, against 77,704 tons the previous week and 54,256 tons the corresponding week of the previous year.

The following have been selected as the permanent board of directors of the Erie Railroad: E. B. Thomas, J. J. Goodwin, Abram S. Hewitt, John G. McCullough, D. O. Mills, Alexander E. Orr, George W. Quintard, Samuel Spencer, Francis L. Stetson, Charles H. Coster, J. Lowber Welsh and Samuel E. Williamson. The last four are new directors. There is still one vacancy in the board.

A Philadelphia dispatch says that the rumors published to the effect that George B. Roberts was about to retire from the presidency of the Pennsylvania Railroad are emphatically and authoritatively denied.

A St. Louis dispatch says that the Illinois Central Railroad Company has purchased the Cairo Short Line Railroad, thus securing a direct line to St. Louis.

The railroad commissioners of Texas have issued an order requiring that "when two or more routes of railroad shall be in operation between shipping point and point of destination, the lowest rate applicable by any one of such routes shall be adopted by the other routes accepting freight for transportation between such points." "In other words," says the *Railroad Gazette*, "if you are not willing to accept the lowest rate you must not take freight at any price, no matter how much faster time you can make, how much better your facilities for loading and unloading promptly and conveniently, or how willing the shipper may be to pay you a little more than the other road asks."

Legislative.

It is reported in Washington that President Cleveland will at an early date send to the House a special message bearing upon the subject of the Nicaragua Canal.

The New York Assembly and Senate have passed the Reciprocity Insurance bill.

In the Consular and Diplomatic Appropriation bill, reported to the Senate this week, there is a provision advancing the position of consul at Capetown to that of consul-general, and adding $1,000 to the existing $2,000 salary.

Miscellaneous.

The Secretary of the Interior has decided upon May 1 next as the date of the opening or settlement of the agricultural lands of the Red Lake Indians in Minnesota, which embrace about 800,000 acres, and will be sold at $1.25 per acre.

The National Farmers' Alliance and Industrial Union met in convention this week. About 50 delegates were in attendance, representing the states of Alabama, Arkansas, California, Colorado, Georgia, Indiana, Iowa, Kansas, North Carolina, New York, New Jersey, Pennsylvania, South Carolina, South Dakota, Texas, West Virginia and Virginia.

Before the Supreme Court of the United States adjourned on Tuesday for the February recess, at the suggestion of Solicitor-General Conrad, the date of hearing the argument upon the sugar bounty cases, appealed from Louisiana, was changed from the second Monday of March to the third Monday of the same month. In was stated that the press of business in the Department of Justice would prevent the government's law officers from suitably preparing to argue the case by the first date mentioned.

The President has appointed the Assay Commission to test and examine the weight and fineness of the coins reserved at the several mints during 1895.

Dredging in the Chicago river of an amount which will cost about $1,000,000 is urgently needed, and Congress is asked to appropriate this sum by a conference of the river and harbor interests of Chicago. Previous to 1891 the city expended about $75,000 annually in this work, but in the year named the federal government assumed absolute control of the river, and all further improvement required the sanction of the department. The present condition of the river is such that immediate dredging is necessary.

An old project to unite the waters of the Tennessee river and those of the Warrior and Coosa rivers by a canal has been recently revived. The movement was briefly discussed in Chattanooga last year during a visit of the Commercial Club of St. Louis, and now the mayor of Birmingham, Ala., has addressed letters to a large number of prominent business men, representatives, engineers and others, asking for any information they may have looking to an estimate of the feasibility, cost, etc., of such an undertaking. It has been suggested that the convict labor of Alabama be employed on the construction of the canal, and that Congress be asked to give aid.

Specifications for a drainage system for New Orleans have been submitted to the city council. The specifications have been approved by a board of advisory engineers, consisting of Messrs. B. R. Harrod, Henry B. Richardson and Rudolph Hering. The estimated cost of the work is about $8,000,000. Its main features are canals and pumping stations.

At the Philadelphia Foundrymen's Association this week the feature of the occasion was the reading of a paper prepared by R. A. Hatfield, of the Hatfield Steel Furnace Company, of Sheffield, England, on "How to Handle the Wage Question." The writer took the ground that both labor and capital should be organized, and instead of meeting only when differences exist that require settlement, there should be frequent meetings between the representatives of employer and employee. By this means he held that meetings of the former character and labor troubles would be less frequent.

The *Chattanooga Tradesman* says: "Textile mill managers say that prices for finished goods are too low in proportion to the price of cotton, and are looking for an advance. The southern cotton mills are all doing a large business."

Foreign.

The French trade returns for the entire foreign trade of 1895 are: Imports, 3,968,000,000 francs, and exports, 3,387,000,000 francs, as compared with 3,850,000,000 francs and 3,078,000,000 francs respectively in 1894. The falling off in imports was solely in cereals.

According to London *Industries and Iron* the Yarrow aluminium torpedo boat has had but a brief career. "Although it is but a short time since the vessel was floated, the metal has corroded to such a degree that it can be penetrated with slight pressure. M. Moissau has found that this pressure is produced by the presence of a certain impurity in aluminium, each of three samples of aluminium examined by him containing a minute percentage of the metal sodium. This may be a discovery of the greatest importance in regard to the commercial development of aluminium, and one which at the same time amply accounts for the deteriorating effects of water upon this material."

The London *Times* says that at the first general meeting of the Russo-Chinese Bank "five-eighths of the foundation capital of about a million sterling has been taken up by French bankers. Prince Esper Oukhtomsky, the president of the administration, is very hostile to English policy in the East. As editor of a newspaper he declares that he is at the head of a group of Russians who preserve unfaltering faith in Russia's universal historical mission, which, according to them, is 'to hold up Russia as an example to all the world of a Christian state where Christ's teachings of truth and love are not only outwardly professed, but inwardly practiced and realized.'"

The *Novoe Vremya* of St. Petersburg urges an alteration of the Russian calendar so as to bring it into conformity with the reckoning of the rest of civilized Europe.

Japan proposes to build up her commercial navy by giving subsidies to shipbuilders for every ton above 1,000, and to shipowners for all ships of 1,000 tons that can make ten knots an hour, the subsidy being increased for every 500 tons additional burden or every knot additional speed.

The Canadian government is perfecting plans for an expedition to Hudson's Bay during the coming summer.

A cable dispatch says the combination of Scotch oil traders, established some time ago with the object of sustaining rates, has been broken and rate-cutting has begun. "The Standard Oil Company is flooding the market with its products."

The Dominican Republic is reported to have concluded a commercial and navigation treaty with Germany.

The German Bundesrath has passed the Sugar bill.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

National Bank—Receiver—Contract.

The appointment of a receiver does not terminate the corporate existence of a national bank, according to the decision of the Supreme Court of the United States in the case of The Chemical National Bank of Chicago vs. Hartford Deposit Company.

Railroad Employee—Accident.

The Supreme Court of Indiana held, in the recent case of The Pennsylvania Railroad Company vs. Finney, that a railroad company was not liable for the death of an employee from contact with a standpipe which he had passed in daylight every day for six months, which could be plainly seen half a mile away in the direction from which he approached it, and which struck the deceased as he was climbing down the side of a car to enter the caboose for his own comfort after having discharged a duty that required him to climb to the top of the train.

Statute of Frauds—Sale—Security.

The Supreme Court of Indiana held, in the recent case of Slack vs. Collins, that the vendor of personal property has no lien thereon for the purchase money after he delivers possession to the vendee; that an oral agreement between the owner of real estate and a lumber dealer that the land and buildings to be erected thereon shall be security for the payment of the purchase price of lumber used in erecting the buildings is in violation of the statute of frauds, and that such a security can only be obtained by proceedings under the mechanics' lien law.

Option in Oats—Gambling.

In the case of Connor et al. vs. Black, recently decided by the Supreme Court of Missouri, it appeared that five years ago the plaintiffs, who were brokers, sold for the defendant on the Merchants' Exchange a large quantity of oats at sellers' option for September. Upon a rise in the market the defendant refused to furnish more money for margins, and ordered the plaintiffs to purchase the required quantity of oats in the market to meet the contract. The plaintiffs lost money on the transaction and sued to recover, but were defeated, on the ground that under the legislation of Missouri the debt was a gambling debt. A counterclaim set up by the defendant for the margins furnished was defeated on the same ground.

Chattel Mortgage—Recording—Evidence.

The Supreme Court of Indiana held, in the recent case of Stengel et al. vs. Boyce, that a chattel mortgage must be recorded within ten days after its execution in the county where the mortgagor resides; that a complaint for the foreclosure of a chattel mortgage, which was made an exhibit and recited that it was executed by S., of Marion county, should show that such mortgage was recorded in Marion county, or should show by direct averments that the mortgagor resided in some other county at the time of recording, and that an averment in such a complaint against the mortgagor and two other defendants that the mortgage was recorded in Carroll county, "where the defendant lived," did not show that the mortgage was properly recorded.

Patent—Injunction—Government Use.

In the case of Belknap vs. Schild et al., decided this week by the Supreme Court of the United States, it appeared that the defendants were the owners of a patent caisson gate used by Belknap in prosecuting government work without permission of or compensation to the owners, and they sued for an injunction and an accounting. The trial court granted the injunction and a master reported the damages at $40,000. The court held that the invention being used by an officer of the United States for the common defense and general welfare, no injunction could lie against him, and that the only damages proved being those in behalf of the United States, for which he could not be held liable, the judgment of the lower court must be reversed with instructions to dismiss the bill, without prejudice to a suit at law against the officer for damages or against the United States in the Court of Claims.

Employer's Liability—Machinery.

The Supreme Court of Minnesota held, in the recent case of Harris vs. Hewitt, that where a servant has knowledge of the defective instrumentality furnished for his use by the employer, and gives him notice thereof, and the employer promises that it shall be remedied, but neglects to do so, and induces the servant to remain in his employ, and the servant is subsequently injured by reason of such defect within the time fixed when such defect was to be remedied, or within which time it might reasonably be remedied, the employer is liable if the instrumentality was not so imminently and immediately dangerous that a man of ordinary prudence would have refused to longer use it, and that the question of contributory negligence by reason of such use by the servant after such notice and promise of repair is not one of law, but of fact to be settled by the jury.

Corporation—Receiver—Guaranty.

In the case of The Philadelphia and Reading Coal and Iron Company vs. Daube, recently decided by the United States Circuit Court for the Northern District of Illinois, and reported in the Chicago *Legal News*, it appeared that the plaintiff corporation sold coal to a firm on the guaranty of the defendant, who was the father of one of the copartners. A receiver was appointed for the corporation under a foreign jurisdiction. The corporation continued to sell goods to the firm, and on the refusal of the latter to pay a bill for coal sent before and after the appointment of the receiver, the corporation sued the defendant on the contract of guaranty. The defendant claimed that the appointment of the receiver relieved him from liability for the part of the claim contracted thereafter. The court held that the defendant was liable for the entire amount of the claim, and that the appointment of the receiver did not operate to relieve him from further liability. The court (Seaman, D. J.) said: "I can find no ground for holding a substitution of new parties or change of relationship which can relieve the guarantor from liability on the subsequent sales. It is true that the court has interposed its agency, through the receiver in the control of the business, but the corporation retains its title 'and even the right of possession in the property;' its corporate existence and interests are unaffected, and it has the same corporate benefit in all the subsequent transactions to which it was entitled before the appointment, it being the established rule respecting corporations that their managing officers and directors are at all times charged with the duty and liability of trustees for the creditors and all parties in interest. This change of management may well be likened to that which takes place when the stockholders, in honest effort for reform, elect a new board of directors, and new agencies are substituted in conducting the affairs, in which case, I presume, there would be no contention that existing contracts of the character in question would be released."

Bank—Credit—Pass-Book.

The Supreme Court of Georgia held, in the recent case of James et al. vs. Crossthwait, that while a bank may, without requiring the deposit of any money, give to a customer a valid credit upon its books in a stated amount, to be used by him for a special and limited purpose only, this cannot be accomplished merely by entering the credit in a customer's favor, and immediately canceling it by another entry predicated upon the fact that the customer is required to draw at once a check for the full amount of such credit, the result of which is to deprive the customer of any right at all to draw further upon the bank so far as this particular credit is concerned. Such a transaction amounts to giving such customer no credit whatever. The court further held that an entry upon a "pass-book" purporting to show that the owner of the book has credit in a bank for a specified balance is not, of course, conclusive or binding upon the bank; but where a banker issued and delivered such a book containing an entry of this kind which was ab initio false, and where after this had been done a third person who had seen the book applied to the banker for information as to the genuineness and accuracy of the apparent credit, at the same time disclosing his reasons for making the inquiry, and the banker, while expressly declining to give, in terms, the information thus sought, did, by concealing the truth or by other means, induce the inquirer to believe the entry in the book was true and correct, and in consequence of such belief to make with the owner of the book a contract whereby such inquirer, though exercising due care in the premises, was defrauded and suffered a loss, the banker, if from the particular circumstances of the case he was under an obligation to communicate to the inquirer the exact truth of the matter, was, within proper limits, liable in damages to the latter on account of such loss. Whether or not in a given case such an obligation on the part of the banker existed was, the court said, a question of fact for determination by the jury in the light of all the surrounding circumstances.

BUSINESS NOTES.

British Imports of Hay.

The imports of hay into the United Kingdom in 1895 reached a total of 118,795 tons from nineteen countries. The following is a comparative statement of totals:

	Tons			
From	1895.	1894.	1893.	1892.
United States	36,176	152,423	101,132	11,538
Holland	24,267	13,540	28,332	19,403
Canada	16,899	28,711	63,175	13,120
France	16,379	6,206	1,234	3,526
Algeria	7,090	3,951	731	3,590
Belgium	6,236	3,887	3,436	90
Germany	5,198	1,929	2,188	4,290
Denmark	2,668	5,042	4,252	2,291
Norway	1,601	2,969	1,674	2,225
Russia	298	28,822	27,694	2
Chili	217	4,070	3,614	346
Other countries	1,766	2,664	25,588	816
Totals	118,795	254,214	263,050	61,237

Atlantic Port Sugar Imports.

Imports of sugar at New York, Boston, Philadelphia and Baltimore were 1,448,329 tons, as against 1,625,960 tons the previous year. "It is to be regretted," states a recent report, "that Philadelphia's share of the importation of this article has for some years been declining, as is shown by the following table:

	Tons			
Received at	1892.	1893.	1894.	1895.
New York	727,190	810,716	980,820	915,120
Boston	189,603	170,856	171,747	165,584
Philadelphia	484,986	438,971	473,393	358,105
Baltimore	....	2,200	....	9,520
	1,401,779	1,422,743	1,625,960	1,448,329

Atlantic Port Petroleum Exports.

Exports of petroleum from New York, Philadelphia and Baltimore "amounted to a total of 15,003,409 barrels, as against 15,950,868 barrels in 1894. Philadelphia's percentage of the export for 1895 shows a slight increase over 1894, being 42½ as against 40 in 1894. New York's percentage, on the other hand, decreased from 54¾ in 1894 to 51⅛ in 1895, while Baltimore increased from 5¼ in 1894 to 6¼ in 1895. The following table shows what each port did:

	Barrels			Total.
Port.	*Bulk.*	*Round.*	*Cases.*	*50-g. bs.*
Philadelphia	5,004,697	698,044	3,405,118	6,381,765
New York	5,046,075	731,079	9,479,649	7,673,083
Baltimore	948,561	....	....	948,561

New York's Electrical Exhibition.

New York city is to have an electrical exhibition, beginning May 4 next and continuing until June 1. The exhibition is to be held under the auspices of the National Electric Light Association in connection with its nineteenth convention, and promises to be the largest and most interesting display of electrical apparatus of all kinds ever held in this country. The exhibition will be in the Industrial Building, on Lexington avenue, between Forty-third and Forty-fourth streets. Many novel and unique features in electrical displays will be introduced. There will be given a series of popular and practical lectures on electrical subjects by scientists.

Botanic Gardens.

The Berlin paper *Kuhlow's* says: "Of botanic gardens France has 22, Germany 35, Great Britain and Ireland 11, The Indian empire 9, Italy 22, Russia 14, New Zealand has 3, the United States 5. It is said that the finest botanical gardens in the world are situated in the islands of the Azores. When Portugal was at its prime in the great office of discovering the world, a rage for botanical specimens was current among all interested in the maritime adventures of those interesting days. The climate of the Azores lends itself particularly to the growth of the products of almost every land. The result is a series of magnificent botanical gardens in those summer islands, where may be seen nearly every tree and plant known to the early navigators."

Phosphate Production.

The *Engineering and Mining Journal* says: "For the past year or two a good deal of apprehension has been felt by phosphate producers in this country and elsewhere as to the competition of the African deposits. * * * The Tunisian mines are not yet worked to any considerable extent, and, according to *l'Engrais*, the total production of Algeria in 1895 was 121,475 metric tons, which is only a very small amount compared with the total consumption of Europe alone. At present very little work is in progress, owing to the difficulties over the concessions at Tebessa and elsewhere. Our Florida producers have, apparently, no occasion to be alarmed at African competition for some years to come. A more formidable interference with their business is found in the rapidly increasing use of Thomas slag as a source of supply of phosphoric acid. The quantity of this slag produced in Germany and Belgium is growing, and its application in the manufacture of fertilizers has been promoted by its abundance and cheapness, so that it has become a considerable article of commerce."

Duty on Cut Diamonds.

The Treasury Department is investigating the falling off of receipts from imported cut diamonds. "The appraiser at New York reports that little, if any, revenue is now derived from that source. He says, however, that diamonds are now more plentiful and cheaper than they have been for many years, and he, in this connection, expresses the opinion that the smuggling of the precious stones is carried on more successfully now than heretofore. Under the present construction of the law cut diamonds are dutiable at the rate of 25 per cent. ad valorem. Under the former tariff law they were dutiable at the rate of 10 per cent., and during the last year of the operation of the old tariff $100,000 in duties on cut diamonds, representing a value of $1,000,000 imported, was collected at the port of New York."

Three Foreign Exhibitions.

The London *Times* says: "The Swiss National Exhibition begins at Geneva on May 1 and terminates October 15. Mr. Theodore Turrettini, mayor of Geneva, is president. It is expected that the electrical exhibit will be one of the finest ever seen. Mr. Turrettini is the consulting engineer to the American company now constructing the works at Niagara Falls, and he has completed great works near Geneva, whereby the river Rhone supplies 12,000 horse-power, to be electrically transmitted six miles to the grounds. There will be a traveling footpath, operated by electricity, traversing the great machinery hall, horseless cabs driven by electricity, and appliances for ærial navigation. Professor Pictet will display his inventions for producing intense cold, showing a temperature of 415° below zero. Other features will be a Swiss village, showing their cottage industries, an aquarium, where the spectator is beneath the water, and a Himalaya railway, wherein travelers climb to the top of a great tower by means of a car running upon a cable. It is proposed to hold a fine art and industrial exhibition in Barcelona, beginning April 23 next, and the Foreign Office has received a communication stating that an international exhibition will be held in Brussels in 1897."

Commerce with Great Britain.

The *Shipping and Commercial List* says: "Some weeks ago we gave figures in detail showing the imports to and exports from the United States to the United Kingdom and dependencies for a certain period up to and including 1894. This week we have received from the Bureau of Statistics the following additional figures for the fiscal year 1895:

	Imports from United States.	*Exports to United States.*
United Kingdom	$159,083,243	$387,125,458
Gibraltar	7,807	381,875
Bermuda (prior to 1892 included in British West Indies)	405,707	821,534
British Honduras	181,809	402,933
Dominion of Canada, Nova Scotia, New Brunswick, etc.	5,851,615	4,041,775
Quebec, Ontario, etc.	26,919,413	46,712,706
British Columbia	3,803,299	2,100,208
Newfoundland and Labrador	431,836	1,126,999
West Indies—British	9,777,444	7,764,178
Guiana—British	2,521,704	1,705,631
East Indies—British	21,266,013	2,853,941
Hong Kong	776,476	4,253,040
British Australasia	4,620,828	9,014,268
British Africa	776,114	5,203,378
All other British	1,382,673	637,797

Pennsylvania Tracks.

The chief engineer of the Pennsylvania Railroad Company has issued his annual record of the transportation lines owned and operated by his company. On December 31, 1895, the increase in trackage on the western lines was nearly eighty miles. The following table shows the length of the railroad lines east and west of Pittsburgh and Erie, and the number of miles in each state:

	Number miles		
States.	*East of Pittsburgh and Erie.*	*West of Pittsburgh and Erie.*	*Total miles, all lines.*
New York	106.11	....	106.11
New Jersey	746.83	....	746.83
Pennsylvania	2,943.26	310.42	3,253.68
Delaware	238.28	....	238.28
Maryland	394.96	....	394.96
District of Columbia	8.15	....	8.15
Virginia	44.50	....	44.50
West Virginia	24.48	52.58	77.06
Kentucky	....	2.91	2.91
Ohio	....	1,483.38	1,483.38
Indiana	....	1,409.60	1,409.60
Illinois	....	645.84	645.84
Michigan	....	471.11	471.11
Total miles	4,506.57	4,375.84	8,882.41

"If these rails were laid in a straight line they would form more than a double track line between New York and San Francisco, or a single line with enough for turnouts for a line from London to the Pacific coast, or the line could be extended to Paris. The figures above only include the first track. For all tracks the mileage amounts to 15,429."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

Showing Stock Outstanding, Bonds, Mileage, Last Dividends and Total Sales, with Range of Prices in 1895 and 1896.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade waited the results of subscriptions to the bond issue, and the sentimental effects of the unexpectedly favorable outcome have been for easier money and improvement. Additional favorable influences are found in heavier bank clearings, continued firmness of prices, sustained demand for iron and steel, and the announcement from St. Paul, Milwaukee, Omaha and Des Moines of a revival in business with jobbers in staple lines. At the east Baltimore and Pittsburgh report favorable trade conditions. At the south gains in wholesale lines are announced from Nashville, Memphis, Atlanta and Birmingham. The reverse includes the depressing influences of stormy and wet weather, indifference of consumers of domestic woolen dress goods, renewed sales of print cloths and other makes of cotton goods only alter a reaction in prices, continuance of extreme conservatism in almost all lines, and the fact that the relief to the Treasury by the heavy oversubscription to the bond issue, in the absence of sound currency legislation by Congress, will probably prove only a temporary device to maintain the gold reserve. General trade at Chicago, St. Louis, Buffalo and Philadelphia shows no real gains from the preceding week, when the situation was quiet even to dullness, and the outlook unsatisfactory.

Speculative interest in the stock market has been evidently stimulated by the unexpected degree of success attending the government bond subscription. Professional interests, however, have realized profits on extensive lines of stocks purchased at lower prices. London has not responded to the outcome of the bond issue or the improvement in prices here, and sold stocks, while traders have put out short lines. The market has absorbed these offerings, but their amount has held it in check, and even caused slight recessions. At the close of the week, however, there is a decided advance of prices on the shorts, and the successful bidders for bonds are supposed to be supporting the general market. The new government bonds are in request at 116½. There is a short interest in them from parties who sold expecting to receive allotments. Foreign exchange was very weak, but recovered on the comparatively small amount of bonds bid for by foreign interests. On Friday rates are a trifle lower at 4.88 for demand sterling. Shipments of gold from London in connection with the government bond subscription continue. About $3,100,000 gold was received this week, and $1,000,000 or more is en route.

Increased demand for copper and lead has stimulated prices for those metals, and oats, corn, wheat flour and wheat are higher, in sympathy with the strength of the statistical position of the latter. BRADSTREET'S report of the world's wheat stocks, February 1, shows 21,000,000 bushels less than a year ago, and 24,000,000 bushels less than two years ago, the total being as small as on April 1, 1895, promising nearly as small a total on July 1 as four years ago, and, with reduced supplies from the Argentine, Russia, India and Australia, indicating a probability that wheat-importing countries will have to intrench heavily on their reserves this year.

Cotton and coffee remain firm at practically unchanged quotations, as do wool, lumber and coal. Iron and steel markets are encouraged by increased orders for rails, one-quarter of last year's output having been ordered at this time for 1896 delivery. Eastern rail mills are reported to have taken large contracts for delivery in California and Chili, in competition with foreign mills. Receipts of live stock at western centers are heavy, and prices are lower for sugar, lard and petroleum.

January bank clearings reflect the decline in the volume of business during the past three months, but are larger than the totals for January one and two years ago, although 23 per cent. less than the January total in 1893. The week's total of clearings is $1,000,000,000, 11 per cent. more than last week, 2 per cent. larger than in the first week of February, 1895, 11 per cent. heavier than in the corresponding week of 1894, but 24 per cent. less than in 1893, and 34 per cent. less than in the corresponding portion of 1892.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,907,000 bushels, against 2,550,000 bushels last week, 2,020,000 bushels in the week a year ago, 2,678,000 bushels in the week two years ago, and 3,931,000 bushels in the first week of February, 1893. Exports of Indian corn this week amount to 3,222,000 bushels, a trifle more than last week, three times the quantity in the like week last year, more than twice the quantity exported in the corresponding week of 1894, and more than six times the amount shipped out of the country in the first week of February, 1893.

Reports to BRADSTREET'S of suspensions and failures of banks and other exclusively financial institutions in the United States for 1895 and 1894 show that, with the exclusion of national banks and loan and trust companies, remaining groups into which the exhibit is divided show large increases in the number of such embarrassments last year as compared with the year before, which applies to totals of liabilities as well. The total number of suspensions and failures referred to was 149 in 1895, as compared with 98 the year before, liabilities amounting to $23,624,000 last year, and to $18,028,000 the year before.

Speculation in wheat at San Francisco checks exports, and wheat freights are weakening. Portland and Tacoma regard the outlook for the success of the proposed Pacific coast lumber mill combination favorable and prospects favoring an advance in lumber prices.

The total number of business failures throughout the United States this week, as reported to BRADSTREET'S, is considerably smaller this week, 338, as contrasted with 393 last week, 293 in the week one year ago, 336, or almost exactly the same number in the first week of February, 1894, 223 in 1893, and with 214 in 1892.

At Toronto jobbers report general trade quiet and unchanged, and that the increased number of failures and the renewals of mercantile indebtednesses have had an unsettling effect. The like is reported from Montreal, but from Halifax it is stated that trade is better, owing to an improvement in the weather and in the condition of the roads throughout Nova Scotia and New Brunswick. A snow blockade in Newfoundland has checked distribution of merchandise in all lines. Total clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $22,049,000 this week, an increase of 22 per cent. over last week, 11 per cent. over the corresponding week in 1895, 17 per cent. as compared with 1894, and 10 per cent. over the like week in 1893. The long list of business failures reported from the Canadian Dominion last week is practically repeated with a total of 60, compared with 63 a week ago, 51 in the week a year ago, 56 two years ago, 45 three years ago, and 68 four years ago.

FINANCIAL.

The Money Market.

There is no indication of any financial stringency in connection with the payment for bond subscriptions. Call loans were nervous and irregular on Tuesday and Wednesday, and on the latter day as high as 6@8 per cent. was quoted at the Stock Exchange. Even before the close on Wednesday, however, money was freely offered at from 2½@4 per cent., and on Thursday the extremes were 2½@6 per cent., the course of the market indicating that lenders soon disabused themselves of any idea that higher rates would be produced. Time money has been somewhat more active, though both supply and demand are restricted. Rates are quoted 5½@6 per cent. for short and 6 per cent. for long loans. There is a belief in brokerage circles that commercial paper will soon be more largely offered, and some out-of-town buyers for it have appeared, 6 per cent. being at present rate quotable for high grade paper. Bullion dealers continued to quote ⅜@⅝ per cent. premium for gold, but by Tuesday the demand for it had fallen off considerably. A nominal quotation of ¼ per cent. for legal tenders was also made, but no transactions are reported.

The New York Banks.

The changes in averages shown by the bank statement of last Saturday was generally construed as indicating that the larger subscribers to the new government bonds had generally completed their arrangements for bidding. At any rate, the variation in the principal items from those of the preceding week were on a decidedly smaller basis. There was an increase of $685,000 in specie and of $1,436,000 in legal tenders, making the total increase in reserve holdings $2,121,000. The reduction in the item of loans was also much less than in the statements for several weeks past. It was only $717,200 in amount, while the deposits increased $706,000. The result of the other changes was an increase of $1,944,900 in the surplus reserve. The figures of the statement compare as follows with those of the preceding week:

	Jan. 25.	Feb. 1.	Changes.	
Loans	$447,859,900	$447,142,700	Dec.	$717,200
Specie	70,100,900	76,845,900	Inc.	685,000
Legal tenders	83,952,800	85,389,300	Inc.	1,436,500
Deposits	489,740,800	490,447,200	Dec.	706,400
Circulation	13,810,500	13,799,000	Dec.	11,500
Total reserve	100,113,700	162,235,200	Inc.	2,121,500
Reserve required	122,435,200	122,611,800	Inc.	176,600
Surplus reserve	37,678,500	39,023,400	Inc.	1,944,900

At the corresponding period last year the surplus reserve was $36,751,500, against $111,623,000 in 1894.

The Boston Banks.

	Feb. 3, '96.	Jan. 30, '96.	Changes.	
Loans	$160,884,000	$162,778,000	Dec.	$1,894,000
Circulation	8,965,000	8,944,000	Inc.	21,000
Deposits	99,590,000	100,844,000	Dec.	1,248,000
Due from reserve agts	16,517,000	16,448,000	Inc.	69,000
Legal tenders	5,391,000	5,552,000	Dec.	161,000
Specie	11,449,000	11,655,000	Dec.	206,000

Foreign Exchange.

In the early part of the present week the exchange market showed a decidedly lower tendency; since Thursday has inclined to recover some of its decline. The drop which on Monday last caused a reduction of 1c. in posted quotations, to 4.87@4.88½, and a fall in actual rates for demand sterling to 4.87½, was apparently connected with the preparations for the bond issue. The general feeling of suspense in financial circles pending the closing of the subscriptions for the new government 4s reduced inquiry to a minimum, and, while too much stress had not been put upon the stories of drawings by houses which put in bids for the bonds for account of foreign correspondents, some of the offerings of bills were due to that cause. The sentimental influence of the expected allotment of considerable amounts to European subscribers was also effectual in keeping the market in suspense and making low rates prevail. The supply of commercial bills, it may be observed, has been very moderate throughout the week. On Tuesday the market was a little steadier in tone, actual business in demand being 4.87¾@4.88 and posted rates unchanged. The same conditions existed on Wednesday, when transactions were on a very restricted scale; but on Thursday the comparatively small amount of the successful foreign bids for new bonds had its natural effect in a lessened readiness to draw and a better inquiry. Posted rates were advanced to 4.87½@4.89, and actual figures for demand bills on London went up to 4.88@4.88¼. During the week $3,100,000 gold came in from Europe, most of it being consigned to houses engaged in the bond subscription. The exchange market on Friday was dull and somewhat lower in its tendencies.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

@	@	@	@	@	@
4 87¼	4.86¾	4.86¾	4.86¾	4.87	4.87

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88@4.88¼; commercial bills, 4.86@4.86¼; francs, 5.18@5.16¼; reichsmarks, 95@95 7/16.

The Bank of England discount rate is unchanged at 2 per cent. The bank this week gained £281,000 in specie. Its proportion of reserve is 63.39 per cent., against 62.14 per cent. last week. In the London open market call money has been steady all week at ½ per cent., and private discount at ⅞@15/16 per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending January 31, 1896:

	1896.	1895.
Dry goods	$3,014,466	$3,875,076
General merchandise	6,830,659	5,145,745
Total for the week	$9,845,125	$9,020,821
Previously reported	42,311,698	41,414,509
Since January 1	$53,156,823	$50,435,330

The exports (exclusive of specie) from New York to foreign ports for the week ending February 4 were $846,418 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,496,366	$7,306,318
Previously reported	32,492,485	29,683,303
Since January 1	$40,988,851	$36,989,621

Silver.

There is very little life in the silver market at present. Quotations have varied fractionally this week, but the tone may be described as strong.

THE STOCK MARKETS.

The New York Stock Market.

Professional speculators seem to have overdiscounted the successful result of the government bond subscription. While no one in Wall street or out of it realized that the total applications would reach the stupendous figures they actually did, it was known by the end of last week that the new loan would be largely oversubscribed. The feeling of astonishment, mingled with hopeful feelings for the future, which found expression when the extent of the bids was announced, has undoubtedly created a bullish sentiment and produced some outside speculative buying of stock. Nevertheless, the bull cliques and traders who had purchased securities in anticipation of being able to sell them on the market created by the success of the bond issue, realized profits on a larger mass of stocks than the market was able to digest. Prices rose during the early part of the week, and there was a somewhat excited further advance on Wednesday afternoon, when the outcome of the subscription was first known. On Thursday, however, the market was held in check by the realizing sales above referred to, and the process seemed to be still incomplete on Friday. At the same time, considering the narrow and professional character of the recent improvement, the market has displayed great steadiness and an ability to take a heavy outpour of long stock which argues well for its future stability. The market on Friday showed more of a disposition to advance, but advances were checked by renewed realizing and short selling before the close.

Sugar stock has been the speculative feature of the week. The appearances justify a belief that inside interests are supporting the stock. It advanced to 113, reacted to 112, and rallied to 113⅜. The fact that the German Federal Council has passed a bill, and reported it to the Reichstag, increasing the bounties on raw and refined sugars of native production, has been much discussed, but it is claimed that such a measure, in the present condition of the world's sugar supply, would only inure to the benefit of American refiners, who will be obliged to import the German article to a considerable extent.

Next in order came the granger railroad stocks. St. Paul advanced to 75¼, reacted to 73¾, and rallied to 75⅞. Rock Island, after touching 73, receded to 72¼. It is claimed that the western railroads have received no material increase of corn tonnage on the advance in price. Missouri Pacific was very weak and fell from 25⅞ to 22⅝. Rumors of internal dissentions in the management, and of a possible receivership, are denied, but the weakness of the stock attracts attention. Manhattan advanced from 105¾ to 107¾, and rumors are current that some interest, presumably the Metropolitan Traction Co., is negotiating for a lease of the property on a guaranteed dividend basis. General Electric has been the object of bullish points for Boston as to the general condition of the company's business, and of an attack as well. The resignation of the president of the United States Rubber Corporation is said to be the outcome of an interest squabble. Reading advanced from 13⅝ to 15 on talk of further secret concessions to the company by the other anthracite roads in the matter of its percentage of the coal output. The anthracite coal agreement has, however, fallen flat as a speculative factor.

Boston Stock Market.

[Special to BRADSTREET'S.]

The general market has shown rather more activity, and at the close prices are higher. Railroads are selling better, Atchison, Chicago, Burlington & Quincy, Mexican, and New York, New Haven & Hartford Railroad being about 1 point up. In mining stocks operations have been liberal, but Butte & Boston declined about 4 points, with Boston & Montana ¼ point higher, and Calumet & Hecla 5 points up. Bell Telephone closes 3 points higher, while Sugar advanced about the same amount. United States Leather preferred advanced 3 points under large sales of sole leather.

Prices of principal shares, with volume of transactions, have been as follows:

	Price Feb. 6, 1896.	*Week ending Price Jan.* 30, 1896.	*Sales Feb.* 6, 1896.	*Sales Jan.* 30, 1896.

GENERAL TRADE QUIET.

SOME GAINS SHOWN AT THE SOUTH AND THE NORTHWEST, BUT NEARLY ALL STAPLE LINES DULL.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, February 7.—The bond sale was an agreeable surprise to financiers, and the feeling is that conditions will improve. General trade in merchandise continues moderate, but the feeling is that money rates will become easier, which will encourage a larger spreading out of all kinds of business. The money market is yet held quite steady, and 6@8 per cent. is asked for call loans, as to names and collateral, while the general range on time is 5½@7 per cent., although year money has been offered at 5 per cent. The boot and shoe market is showing rather more activity, while shoe manufacturers have bought quite largely of leather of late, recent purchases of hemlock sole being estimated at 600,000 to 700,000 sides, about 200,000 sides of which were for export. Hides are dull and prices easy on domestic, but South American dry hides are firmer. Iron and steel are quiet, but values are held firm. Lumber is quiet, but the market is steady. Prospect is better for getting spruce logs, owing to more snow in the northeast. Coal is quiet, but held firmer.

Philadelphia, February 7.—There seems to be nothing doing in any line. Some few dealers express themselves satisfied with sales, but by far the greater number complain of lack of orders or lack of profits. The weather is bad, even for this time of the year, and apparently every dealer, from the retailer up to the manufacturer, feels the depression. Dry goods have a fair outlook, and a moderate degree of sales have been made for spring delivery.

Pittsburgh, February 7.—Trade conditions here remain practically unchanged. A steady demand is reported in all staple lines and prices are well maintained. Dealers generally report a larger business this year than for the same period last year. The outlook is considered good. The iron market remains quiet and prices are unchanged. Dealers look for no marked change for some time to come.

Buffalo, February 7.—Expressions of gratification on the result of the recent bond sale are heard on every hand, and it is believed it will have a beneficial effect on the business generally. The extreme dullness reported during the past few weeks continues, with the weather decidedly unfavorable.

Baltimore, February 7.—It is the universal opinion of leading houses that the January business has been the largest and most satisfactory done here for years. The first week of February has opened nicely and every indication points to a good spring trade. Collections have been very fair.

West and Northwest.

Cleveland, February 7.—The general trade movement continues along conservative lines, without special change in any department.

Detroit, February 7.—There is no improvement in general trade, which continues dull in all lines, and weather conditions are unfavorable. Collections are still slow and unsatisfactory.

Chicago, February 7.—The success of the bond issue has had a good effect upon the business community, and it is expected to do much toward restoring confidence, which may result in an increased volume of business late in the season. Trade during the week is rather quiet, except in rubbers and shoes, which were bought more freely owing to the bad weather. Sales of dry goods, millinery and clothing are up to the recent average, but show no especial increase and no new features are noticed. The large consumers of leather continue to buy sparingly. Sales of pig iron are the largest of any week this year, and run up to lots of 3,000 tons, at about former prices. Orders for billets and steel rails are not numerous. Lumber is moving fairly and good prices are secured. Bad roads have checked receipts of poultry and prices are 1c. higher. Butter is weak and lower, with large offerings. Potatoes are slow, with heavy supplies, and prices at the low point of the year. Wool receipts, 21,608 pounds.

Louisville, February 7.—A very fair jobbing business is being done, especially in dry goods, hardware and clothing, and in many instances a healthy increase over January, 1895, is shown. Whiskey gives evidence of some improvement. Collections are more satisfactory.

St. Louis, February 7.—Transactions in mercantile lines give evidence of some improvement, but orders are for small amounts and mainly for immediate delivery. Exceptions are noted in such staples as dry goods, boots and shoes, and groceries, which are moving in satisfactory volume. Hides are cheaper, as is usual at this season of the year, but numerous tanneries are still shut down and leather remains firm. Barbed wire and nails are active, with a slight advance in price of the latter. Demand for iron and steel bars is better, and the former has scored an advance of $1 per ton. Black sheets are quiet, without change of price. Collections only fair.

Kansas City, February 7.—The corn crop is being held tenaciously in the hands of the owners in Oklahoma, Kansas and Missouri for better prices, causing buyers to limit their purchases, burdening the jobber in all lines with a carrying-over period and unsatisfactory collections. Live stock receipts are liberal, with low values. Feeders are hopeful of higher prices in the near future.

Des Moines, February 7.—General business is improving, both in sales and collections. Crop moving more active. Outlook much brighter than thirty days ago.

Milwaukee, February 7.—Some improvement in sales is apparent, and trade in general shows a slight improvement over past few weeks. Collections are somewhat slow.

St. Paul, February 7.—The spring trade is picking up, and the jobbers report a good business in nearly every line. In dry goods, men's furnishing, hats and caps there is considerable activity. Collections are fair.

Minneapolis, February 7.—Trade conditions are practically unchanged. Staples are in fair demand, and advance orders for seasonable goods are satisfactory. Prospects for spring trade are fair.

Duluth, February 7.—General business unchanged. Jobbing fairly active. Collections are somewhat better. Lumber is still quiet. Flour mills are slightly more active. Output last week 47,000 barrels. There is some activity in sale of iron properties, especially on Mesaba range, but general real estate business is quiet. Seems to be money enough for business, but little for speculation.

Omaha, February 7.—Trade in all lines show some improvement. Collections are better than for some time.

Sioux Falls, February 7.—Wholesale trade is quiet, with good prospects. Retail dull.

Southern Cities.

Charleston, February 7.—Wholesale dealers report trade fair. Collections are only moderate.

Savannah, February 7.—Trade and collections for the week are fair. There is a marked improvement in each over corresponding week of previous month. Spirit receipts are light. Shipments slow. Rosin is coming in well, and an increase is noted

in shipment over preceding week. Both spirit and turpentine markets are firm.

Atlanta, February 7. — Jobbers in shoes, dry goods, notions and groceries report trade good—much better than for some seasons. Retail trade is fair. Collections are good.

Augusta, February 7. — General trade features are unchanged from last week. Collections are fair.

Jacksonville, February 7.—Wholesale and retail business dull for this time of the year. County collections are poor; city collections fair.

Birmingham, February 7.—Trade has improved somewhat over last week. Collections are ordinary.

Chattanooga, February 7.—No material change is noticeable, but it is somewhat better than at the same time last year. Collections are good.

Nashville, February 7.—Trade continues with considerable activity in all lines, and the output of goods is equal to that in good seasons. Money in banks continues close; on the outside, loans have been made at 6 per cent. Local stocks and bonds show some life.

Memphis, February 7.—General trade is good, especially in dry goods, boots and shoes. Collections are fair.

New Orleans, February 7.—Wholesale jobbing trade report trade slack for the season. City is full of strangers, and retail trade shows improvement. Cotton and rice are steady and quiet. Sugar is moderately active.

Galveston, February 7.—Jobbers report business unsatisfactory for the season. Collections are still complained of.

Pacific Coast.

San Francisco, February 7.—Commercial lines are generally quiet. Hides and leather are dull. Flour active and firm. Produce slow. Wheat weak. The speculative boom in wheat retards exports. Wheat freights are held nominally at former figures, but weakening. Collections are poor and very slow.

Portland, February 7.—The principal lumber mills of the Pacific coast are endeavoring to form a lumber trust, and at present indications are favorable to its consummation. Although trade in general is but fair, there is a marked improvement over that of a year ago. Collections are fair.

Seattle, February 7.—Local business is quiet. Alaska trade is opening strong. Value of January exports, $173,400; imports, $17,120.

Tacoma, February 7. — Commercial lines are steady, close to cash basis, owing to the usual tardiness of collections. Lumber combine, including all Pacific coast exporters, about to be completed, proposes to advance prices. Mills are busy, and logging interests looking up. Wheat and flour trade steady, and prices better.

Canada.

Toronto, February 7.—Business in wholesale circles is quiet, with staple goods unchanged in price. The large number of failures has had an unsettling effect, and renewals have been unusually heavy. Wheat is in active demand and higher.

Montreal, February 7.—In many lines continued complaints are heard as to the dullness existing. Collections are also reported rather unsatisfactory. A large amount of paper matured on 4th instant, with the result that about 40 to 45 per cent. was renewed. The general trade situation is somewhat hopeful, but the continued drain on jobbers, who, year after year, are not gaining ground, is now being felt more severely, and some have decided to retire and liquidate. Quebec City reports dullness generally, although retailers claim to have been benefited by the carnival. Shoe factories are fully employed.

Halifax, February 7.—Trade continues quiet in all lines. There is an abundant supply of produce, which remains low in price and in poor demand. Country roads are in good condition and collections quite up to the average. The weather throughout Nova Scotia and New Brunswick has been very favorable to the lumbermen. In Newfoundland, snow blockades have seriously interfered with traffic all over the country.

Dry Goods.

[Special to BRADSTREET'S.]

With first hands general business is slow, but jobbers report a fair trade in some lines. Foreign dress woolens are jobbing well, while a good business in printed fabrics and linens is noted. Cotton goods are slow of sale all along the line, with buyers trying to force lower prices. Raw cotton maintains a steady, although dull, tone, however, and mill agents are not disposed to give way. Print cloths have shown an easier tone, and at the lower prices more business has been done. Printed fabrics are selling well for popular specialties, but ginghams do not seem to attract much attention. Cheap challies have met with some attention of late, to be used to attract trade. Mills employed on dress woolens report a slow trade and unsatisfactory business all around. Men's-wear woolens sell slowly for fall, although overcoatings have been quite well ordered.

Wool.

[Special to BRADSTREET'S.]

The market shows a rather better tone for the longer staple territory grades, about 1,500,000 pounds being picked up in Boston by manufacturers during the past few days, about 700,000 pounds being taken by one manufacturer. The shorter staple clothing territories are yet dull and easy. Fleece wools are held firm, but the demand is yet slow, and prices largely nominal. Fine A supers and C supers, in pulled wool, are yet in fair demand. Australian wools are firm, but most sales are made below the cost of purchases at the recent London sale. Dealers who have wools bought earlier, which can be sold at a profit below the London basis of price, are letting it go, as a rule, while the later purchases in London are held for an advance. Cape and South American wools are quiet and steady. Carpet wools are firm, with a moderate demand. Stock in Marseilles January 20 was 11,600 bales, against an excess of 30,000 bales over a year ago.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JANUARY 25, 1896, TO JANUARY 31, 1896, INCLUSIVE.

WELSH TINPLATE TRADE.

An unpleasant picture of the conditions and future prospects of the Welsh tinmakers is drawn by United States Consul Anthony Howells in a report to the Department of State. He says: "The tinplate trade of South Wales has persistently during the past few months gone from bad to worse. When, prior to the November elections, 'the ruinous effects of the Wilson bill on American manufacture' was portrayed in certain newspapers, there was much rejoicing on this side of the Atlantic. The optimism which asserted itself was remarkable, and when the facts were quoted as being against those who gloried because American failure meant British success, their reply seemed to be, as is always the case with such as are unwilling to be convinced of being in the wrong, that it was 'so much the worse for the facts.' Unhappily a crisis is at hand, and the only panacea suggested is a general stoppage for a little time next month, provided no improvement takes place in the meantime." The consul incloses a printed call upon the men to suspend work in this fashion, but doubts whether it will be generally heeded, although as there are at least 100 too many mills in existence, the only recourse seems to be to check the output. As it is, scarcely one of the works has been running regularly, there being at present nearly 170 mills idle, with a prospect of an immediate increase of the number.

MAGNITUDE OF POULTRY INDUSTRY.

The *American Agriculturist* states that, in round millions, the poultry industry has grown as follows in the past fifteen years:

	1896.	1890.	1880.
Number of fowls	383	286	120
Dozens of eggs	1,141	820	457
Total value	$343	$275	$118

"Despite the big increase in the poultry business the last five years, and the close attention now given it, there is room for still greater expansion before it is overdone. Figures relating to the industry, just compiled by this journal as a result of an extensive inquiry, enormous as they are, fail to show any general overproduction. These conclusions are reached after a study of advance proofs of census statistics never before printed, the home market situation, together with official figures suggesting possibilities of foreign outlet for poultry products, and most careful deductions from other available data. The magnitude of the poultry business is never imagined by those who have not made a study of the situation. In round numbers our figures show what may be termed a permanent investment of $340,000,000 in poultry in this country. This is reached on the basis of an average valuation of fowls $50c. each, turkeys, ducks and geese $1, eggs 12c. per doz. Considering the vast amount of money invested in breeds of fancy strains throughout the entire country, which will do something to bring up the average value of barnyard fowls, together with the relatively higher values of both poultry and eggs in producing sections adjacent to large cities, especially in the east, these estimates are conservative.

"During the past three years, and in spite of a duty of 3 to 5c. per dozen, nearly 8,000,000 dozen eggs have been imported into the United States, worth about $1,000,000. Canada supplies nearly all these, yet far-off China ships a considerable number each year to our Pacific coast ports.

OUR FOREIGN TRADE IN EGGS.

	Duty per doz.	—Exports— Doz.	Value.	— Imports — Doz.	Value.
1895.....	3c	150,992	$25,312	2,709,411	$324,133
1894.....	3c	163,061	27,497	1,791,430	199,536
1893.....	5c	143,489	33,207	3,318,011	392,973
1892.....	5c	183,063	32,374	4,188,492	522,240
1891.....	free	363,116	64,259	*8,233,043	1,185,595
1890.....	free	380,884	58,675	15,062,796	2,074,912
1889.....	free	548,750	75,936	15,918,809	2,418,976

*Includes 7,007,826 free and 1,225,217 dutiable.

"It is probable that the annual product of the poultry industry, the meat and eggs consumed, represents almost as much money to the producer as does the wheat crop. The value of fowls alone is to-day three or four times the total value of all the sheep in the United States. Even the hogs now in this country represent no greater value than the poultry, and dairy cows are valued at only about double the poultry figures, eggs excluded."

REDEMPTION OF "CURRENCY SIXES."

A Washington dispatch to the Philadelphia *Public Ledger* says: "On Saturday, February 1, bonds of the Pacific railroads to the face value of $4,320,000 will become due and will be paid on that day if presented by holders. These bonds are what are known as 'Currency Sixes,' this designation arising from the fact that the government guaranteed their payment in currency. The bonds to be redeemed are in denominations of $1,000, $5,000 and $10,000, and bear the inscription 'The Union Pacific Railroad Company.' The interest from January 1, the last interest period, to date of maturity, will be paid with the principal to the holders. Interest will cease on February 1. Assignments must be dated and properly acknowledged as prescribed on the back of the bonds, and all packages containing bonds for redemption should be addressed to the Secretary of the Treasury, Division of Loans and Currency, Washington, D. C. Where checks are desired to be made payable in favor of anyone but the payee, the bonds should be assigned to the 'Secretary of the Treasury for redemption for account of (here write name of party to whom payment is to be made).'"

NO HOARDING OF GOLD.

An interesting inquiry has been announced by the Baltimore *News*, made by the Maryland Title Insurance and Trust Company. The latter sent a circular letter to the banks in Maryland "with a view to forming some estimate of the amount of gold hoarded by individuals in the country districts. The answers uniformly indicate the very small extent of hoarding of gold, or, indeed, of any kind of money, and tend to confirm the general belief that in America, even in the country districts, the practice of depositing savings in banks is so universal that private hoards form a very insignificant proportion of the money in existence in the country. Two other points are brought out in a number of the replies, both of which are of interest in reference to the pending government loan. One is that practically nobody in the Maryland counties has bothered himself about the government loan at all, most people there being in the habit of looking out for investments yielding a much higher rate of interest. As one of the bankers writes:

"Replying to your further inquiry as to the amount likely to be subscribed for the new issue of United States bonds, I know of no one who has subscribed nor of anyone contemplating it. Money easily commands 6 per cent. here, and a bond netting only a fraction over 3 per cent. is not sufficiently alluring.

The other point to which we have referred is brought out by the only banker who seems to have had any inquiries worth mentioning concerning the bonds. He says:

"We have had several inquiries concerning the bonds looking to a possible purchase if the bonds should have been issued, but in no case did the individual contemplate supplying the gold with which to pay for them.

On the whole, the inquiry confirms the view that very little was to be got out of the old stockings in the United States, and that of that little but a small proportion would have been gold, however 'popular' the loan might have been made by Secretary Carlisle. It is comforting to believe that there is some little ground for imputing some reason to the Secretary of the Treasury."

TRANS-SIBERIAN RAILWAY.

The *Railway Age* says: "The great Siberian Railway is making good progress. Last year 863 miles of track were laid, bringing the terminus to Krasnoyarsk, a distance of 3,074 miles east from St. Petersburg, and thus completing a continuous rail route from the capital to the bank of the Yenisei river. Of the 4,572 miles from Chelyabinsk, the starting point near the Europe-Asia border, to Vladivostock on the Pacific, 1,658 miles of track have been laid, besides the branch of 150 miles from Chelyabinsk to Ekaterinburg, which is also completed."

ANOTHER CHICAGO FAIR.

Chicago capitalists, business men, public officials and prominent citizens generally are reported to "have taken an enthusiastic interest in the preliminary work for holding a general exposition of southern products and resources in Chicago during next September and October. The preliminary committee on organization, which has just been formed, is headed by William A. Giles, and associated with him are eight prominent citizens, including Colonel Henry L. Turner, commander of the First Regiment, Illinois National Guards, who made a triumphant entry of the south during the Atlanta Exposition. This committee of Chicago-Southern States Exposition Company will assist Mayor Swift in the work of bringing delegations from the south, and getting similar delegations from Illinois to meet together in Chicago, February 19; also to obtain full information regarding the exposition building, its rental, the cost of conducting the exposition from now to its opening, and from its opening to the close, and other information for the benefit of the delegate convention.

"Mayor Swift, upon his return from Florida, will send official requests to the mayors of the principal cities in thirteen southern states asking them to forward to the governors of the respective states requests for the appointment of five commissioners from each state as delegates to the Chicago meeting. Petitions signed by the citizens of these fifty-three cities to the same effect will accompany the letters of the mayors to the governors. It is proposed to have the same number of delegates to represent Chicago.

"At this meeting steps will be taken to incorporate the exposition company, and the necessary stock will be subscribed for. It has been estimated by Malcolm McNeill, secretary of the Chicago and Southern States Association, and secretary of the preliminary committee, that less than $100,000 will be needed for the exposition, and that a handsome surplus will remain in the treasury after all expenses are paid. There will be no dividends, however, the decision having been reached to give to charity any surplus of receipts over expenditures, including the repayment of the money subscribed.

"Chicago citizens will take half the stock, and the remainder will be subscribed for by the thirteen states participating in the exposition, or as many states as join hands. Chicago will bear the expense of a preliminary character, and pay for the building, etc., while the southerners will be expected to pay for transportation, installation and care of exhibits. It is proposed to present all the nonperishable exhibits at the close of the exposition to the Field Columbian Museum, as the gift of the various states to Chicago.

"The plan proposed is that the president, vice-president and general manager, assistant manager and secretary of the exposition shall be Chicago men, as the southern promoters of the project so desire, and that the directory be composed of one from each of the southern states represented, with the same number from Illinois.

"It is also expected that each southern state will be represented by a vice-president of the company, who will be chairman of the state commission. The names of Potter Palmer, Charles Counselman, Harlow N. Higinbotham (president of the World's Fair), Ferd. W. Peck and ex-United States Senator Charles B. Farwell have been presented for president, and that of David K. Hill, of the Willoughby & Hill firm of clothiers, for general manager."

VENEZUELA'S COMMERCIAL AND ECONOMIC CONDITION.

The special correspondent of the London *Times* at Caracas, writing on December 21, said: Commercial interests in Venezuela are suffering from the by no means uncommon, but none the less unpleasant, experience of reaction after a period of undue inflation, this latter resulting from large amounts of foreign capital being drawn into the country for the construction of railways and other public works. The bait held out was the one well-known to the European investor—a government guarantee of a certain rate of interest, in this case 7 per cent. being agreed upon. The total value of the capital so obtained and invested in Venezuela during the eleven years from 1883 to 1894 is stated to exceed £11,000,000 sterling.

"Commercial business is, however, on a fairly sound footing in Venezuela. The currency is on a sound basis, gold coin being the standard of the country, and the two principal banks are managed on sound business lines, and are in a perfectly solvent condition. The very high rate of interest undoubtedly checks the progress of the country, and the only plausible explanation is the constant fear of revolution and the want of confidence in the administration.

"As regards the trade of Venezuela with the outside world, the value of English goods imported is greater than that from any other country. Next comes that of the United States, then Germany, France and Spain in the order named. England supplies cottons, woolens and general merchandise; the United States breadstuffs, oils and provisions; Germany cutlery and general merchandise; France silks and fancy goods; Spain and Cuba wines and tobacco. As traders throughout Venezuela, the Germans are certainly first in importance and numbers.

"The value of the produce exported shows the balance of trade to be slightly in favor of Venezuela. The following is an approximate list of the exports in 1894 and the values at the port of shipment:

Product.	*Amount.*	*Value.*
Coffee, tons	46,000	£3,680,000
Cocoa, tons	7,000	60,000
Hides, tons	170,000	90,000
Gold, ounces	50,000	180,000
Other products	....	100,000
Total	....	£4,110,000

"The economic condition of Venezuela is less happy than the commercial. Men with no knowledge of government obtain control of all political offices, and the country suffers from their ignorance and propensity to make use of power for their personal advantage. The better class of the Venezuelans hold aloof from political life, asserting that to enter politics at once throws upon them the suspicion of doubtful morality, and possibly deserve the reproof administered by Plato when he says that the fate of people who refuse to take part in the government of their country is to be governed by worse men than themselves.

"In 1881 the population of Venezuela was stated to be 2,075,245; in 1891, 2,323,527, of whom 326,000 were of pure Indian blood; these Indians again were classified as 66,000 independent, 20,000 conquered, and 240,000 civilized. In the principal cities and towns some attempt is made to educate the poorer classes, but this is only supported by the authorities in a most half-hearted manner. In the country districts the educational question is entirely neglected. Even amongst the Venezuelans who have been educated in Europe there is no idea of the necessity for the education of the peasant classes.

"Another fact militating against rapid economic development in Venezuela is the gregarious nature of the Venezuelans. Their habit is to flock into the cities and towns rather than devote themselves to the cultivation of coffee or cocoa estates or agricultural pursuits. Life in the cities has, to some extent, added a surface veneer to the raw material, but little beyond this. Among the Venezuelans I do not find that steadfastness of purpose which is so marked a feature with the Chilians, nor is there that polish of manner so frequently met with in Argentina. As to the possibility of Venezuela in the future producing men capable of administering the country in an effective and strong manner, I can only quote the opinion of a well-informed Venezuelan on the matter. His words were: 'Venezuela must come under the immediate influence of the United States or some other strong nation, for the reason that no satisfactory administration will be obtained by herself. I have watched government after government for forty years past, and the class of men you see at the head of affairs now is typical of what has gone before and what may be expected in the future.'

"Coffee is the main staple of Venezuelan wealth, but many drawbacks exist to deter Europeans from embarking in the enterprise. A revolution breaks out, and the male laborers are requisitioned to serve as soldiers on one side or the other.

"All these dangers are equally present to the grower of cocoa, and, indeed, to any undertaking necessitating the employment of large numbers of laborers. The sugar industry only survives in Venezuela owing to the fact that the importation of foreign sugars is absolutely prohibited. The result of this extreme form of protection is that a pound of coarse brown sugar costs from 8d. to 10d. Of other branches of agriculture the most important are the cultivation of Indian corn, beans, and the ordinary tropical fruits and vegetables for local consumption. The number of cattle in the country is estimated at between 4,000,000 and 5,000,000; they are mostly long-horned, small-bodied animals of no great value except for their hides.

"The mining industry shows a very great falling off. In 1890 the value of gold exported was £349,234, as compared to £180,000 in 1894; in 1890 the copper ores shipped were worth £97,990, while in 1894 no copper was exported. Gold is found chiefly to the south of the Orinoco and in the Andine states, in the western section of Venezuela. In the former district is the once famous Callao mine, which paid fabulous dividends for a time. Most of the gold is alluvial, and is, as a rule, 'pocketty' so far as experience has yet gone. It is known, however, that payable quartz exists, as in the case of the Callao, in several districts, and only requires cheaper transport to allow of working at a profit. The principal copper mine was situated not far from Puerto Cabello, but the mineral completely gave out after some years of working. Coal is found near Barcelona, but as yet its exploitation has not proved profitable.

"An approximate estimate of the number of laborers employed in the industries which I have mentioned is as follows:

Industry.	*Average daily wage.*	*Number employed.*	*Total yearly earnings (300 days).*
Coffee, cocoa and sugar plantations	3s.	41,000	£1,845,000
Gold mining	6s.	1,500	135,000
Cattle ranches	£2 10s. per month and food	8,000	240,000
Other farming	3s.	10,000	450,000
Totals		60,500	£2,670,000

"At first sight the rate of wages may appear high to Europeans, but when the cost of living is considered the value earned is by no means too great. The necessaries of life are costly to purchase on account of the high protective tariff, the duty on flour being over 10s. per 100 pounds for the ordinary and additional custom house charges.

"One great hindrance to the speedy settlement and development of Venezuela lies in the physical features of the country. The great mountain ranges, beginning close to the seashore and extending some hundreds of miles inland, makes all transport a long and tedious matter, and to overcome these difficulties by extending the existing railway system is beyond the present means of Venezuela. To-day the patient and hardy donkey is the sole medium of carrying merchandise from the fringe of the coast-line tapped by the railways to supply the needs of the inhabitants in the far interior.

"In all there are eleven separate railway companies, six of these being English, three native, one German and one French. In most cases the government subscribed a portion of the capital for construction, and to seven of the companies further guaranteed 7 per cent. annually on a capital not to exceed £10,000 per mile of railway built. This guaranteed interest is now a bone of contention between the government and the companies, the former alleging the inability of the country to meet such heavy obligations, and the latter being unable to pay dividends to their shareholders unless the government fulfills the terms of its contract.

"Until the management of the country is in the hands of more responsible administrators than those who have directed the destinies of Venezuela for the past decade there can be slight hope of any permanent progress."

CANADIAN FORESTS.

The *Northeastern Lumberman* says: "Canada has always been regarded as a land of forests. This was certainly true a generation ago, and the term is still applicable, though settlement, fires and lumbering have made and are still making great inroads upon their woodland areas. The tree of greatest importance commercially has been the white pine, until of late years the most valuable element in the forests of Ontario, Quebec and New Brunswick. Now spruce, in various forms of logs, pulp wood and lumber, has taken its place as the most important wood. In the maritime provinces and Quebec, hemlock, tamarack and cedar also contribute largely to their commerce, both foreign and domestic. In British Columbia the huge Douglas fir or pine provides a large and increasing amount of lumber and timber for exportation. United States appraisers have ruled that the Douglas pine of British Columbia was a spruce lumber, and subject to the same duty as spruce."

INTERNATIONAL ARBITRAMENT.

The New York *Telegram* says: "Friends of international arbitration are preparing to circulate this memorial for signatures in the United Kingdom of Great Britain and the United States of America:

"'Without expressing any opinion upon pending controversies, we earnestly press to a prompt conclusion a treaty whereby all disputes between Great Britain and the United States shall be referred to a permanent tribunal representing both nations.'

"The London dispatch announcing this news gives the names of several preachers of prominence, both in the Church of England and in the Israelitish faith, and of one or two journalists, as among the projectors of the memorial, and adds: 'The committee comprises nobody of prominence in politics or trade.'

"So much the better. It is well, in view of the present, or, rather, the recent, manifestations of feeling on both sides of the water, that such an invitation for signatures calling on the politicians for a lofty and far-reaching reform in the manner of settling international disputes—reform that, if adopted, shall stand for all time, and that will forever preclude the possibility of war between the two great fraternal English-speaking peoples—should be from the outset removed from the foolish criticism that it was in any degree originated by merely

commercial considerations. As it stands, it comes from classes of thinkers and moralists who had been committed in principle to the project of an international peace tribunal long before the excitement about Venezuela arose. Of course, sensible business men in both countries will favor and expedite and sign this memorial, and from the highest motives as well as from motives of self-interest. At the same time it may be that the cause of peaceful international arbitrament will be more acceptable and more successful as fathered by the clergy and publicists, rather than by politicians, merchants and financiers as such."

INDICATIONS OF THE SOUTH'S ADVANCEMENT.

The Baltimore *Manufacturers' Record* has constantly maintained that the south suffered less from the financial and general business depression than other sections. Everywhere the results were serious enough, and no part of the country has yet regained normal business conditions, but the south stands out conspicuously in every comparison that can be made. Mr. J. K. Upton, of the Census Bureau, has compiled for *Harper's Weekly* a detailed statement showing the assessed value of property, by states, in 1890 and 1891. From this comparison the *Manufacturers' Record* compiles the following:

States and territ's by groups.	Assessed valuation 1895.	Assessed valuation 1890.
No. 1.		
Maine	$324,478,321	$309,129,101

* Changed from local to state valuation for purpose of comparison. † Missouri and Indiana omitted.

"The total increase and the percentage of increase by these groups were as follows:

		Per cent.
No. 1	$1,332,244,595	12.2
No. 2, or southern	357,822,450	7.05
No. 3	90,125,267	1.5
No. 4	86,343,479	4.1

"It was, of course, to be expected that the eastern states, including Massachusetts, New York and Pennsylvania, the leading financial and manufacturing centers, should show the largest gain, but it could not have anticipated that the ten central western states—Ohio, Illinois, Michigan, Wisconsin, Minnesota, Iowa, North Dakota, South Dakota, Nebraska and Kansas—should exhibit a gain of only $90,000,000, or 1.5 per cent., against a gain in the south of $357,800,000, or 7.05 per cent., the south's actual increase being nearly four times as large as that of these great western states, with all their combined agricultural and manufacturing wealth, and more than double the total increase of these ten states and of the Pacific coast states and the territories combined. In the south nearly every state shows a gain in assessed value, while of the ten central western states grouped in this comparison, Ohio, Kansas, Nebraska and South Dakota exhibit a decline in the assessed value of property. The only two states reported in the west which exhibit any material gain are Missouri, which is properly a southern state, and which ought to be so classed, with a gain of $167,000,000, and Indiana, which is developing largely by virtue of its proximity to the south. And yet the Philadelphia *Press* claimed last week that the south 'had been a clog upon the nation's progress for a generation.'

"The five-year period, 1890 to 1895, in which the south has made this progress—wonderful, indeed, when compared with other sections—has probably been the worst which it will ever have to face. It covered the disastrous period following the Baring failure, the great financial crisis, and the general depression which carried iron down to the lowest point in history; and yet through these five years of world-wide decline in values and stagnation in business the assessed value of property in the south advanced over $357,000,000, or 7.05 per cent., against an advance of only $176,000,000 in ten of the richest western states, the Pacific coast states and the territories combined."

SOUTH CAROLINA'S DISPENSARY.

The *Philadelphia Press* says: "The first full summary of the results of the dispensary liquor system in South Carolina appears in the report of the state liquor commissioner sent a few days ago to the governor of the state. Various unauthorized statements have reached the public from time to time, but comprehensive official reports have been lacking.

"The present report covers the time between February 1 and December 31, 1895, a period of eleven months. Within this time the state dispenser claims that the local dispensaries sold liquor to the value of $1,076,963.95, on which the towns and counties netted a profit of $106,131.28. The profits to the state itself were $133,467.77 on sales to the local dispensaries amounting to $903,055.63. The report claims an additional outstanding profit for the state for the period under review of $25,571.85, making a total profit to the state for eleven months of $159,039.62. The profits of the towns and counties on retail sales were almost exactly 10 per cent., while the state's profits on wholesale dealings were about 16 per cent. The total profits to the state since the dispensary system went into operation July 1, 1893, to December 31, 1895, a period of two and a half years, are placed at $243,816.57, an average of a little less than $100,000 a year.

"The point which will interest those who have been studying the temperance question most is whether the dispensary system has diminished the drinking of liquor and the crimes and disorders resulting from its use. On the latter point the report is silent, but on the former point not much hope is held out. A large part of the report is made up of complaints from the state liquor commissioner on the lack of facilities enabling him to fill orders. This does not show less liquor drinking. It is probable that the dispensary sales will rapidly increase in the future, as people have concluded that the system is now a fixed fact. What are known as 'blind tigers' and other methods of illicit traffic will doubtless disappear and nearly the whole liquor business will be conducted by the state. There is no evidence, however, that liquor drinking has been or will be diminished any.

"It will need several years to fully test the merits of South Carolina's dispensary system. That state does not offer the best field for a fair and full trial of this method. One danger inherent in the system is that in a closely contested state the liquor traffic when managed by officials would be more a factor in politics than ever. It is to be regretted that on the most interesting point, as to whether the system diminishes crime, the report gives no information. If it is found that it does it will be the strongest recommendation it can have to popular favor. But for an answer to that question the public will probably have to wait some time."

EUROPEAN IVORY IMPORTS.

Referring to the revival which took place in the ivory trade at Antwerp in 1895, the Manchester *Guardian* "points out that in 1890 the total quantity of ivory imported by Europe was 591,000 kilograms, of which 430,000 kilograms came to this country, and only 161,000 kilograms to the continent. In 1895 the total importation had slightly increased, amounting to 614,000 kilograms, but England only received 321,000 kilograms, the balance of 293,000 kilograms going to the continent. * * * As regards the origin of the ivory sold in Europe, the greater part comes from the Congo basin. Since the closing of the Soudan to European trade by the Mahdi a considerable quantity of ivory which formerly found its way to Europe by way of Egypt now comes down the Congo. Until 1883 the annual export of ivory through Egypt was about 160,000 kilograms, but since then this route has entirely failed. In 1895 the total quantity of ivory derived from the Congo basin is put at the very high figure of 340,000 kilograms, while the Niger and the Benue yielded only 35,000 kilograms, East Africa 93,000 kilograms, and the Gaboons and Cameroons 37,000 kilograms."

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 15, 1896.

As was expected, the action of the Ways and Means Committee last week in deciding to report for non-concurrence in the Senate free coinage substitute for the House bond bill has been followed by the House in Committee of the Whole. A vote taken on the matter on Thursday resulted in a majority of over two-thirds against the Senate substitutes. Up to the present the two houses continue in a deadlock as regards revenue and financial legislation, and no way out of this condition seems apparent at present. One of the incidents illustrative of this was the vote in the Senate on Thursday against Senator Morrill's motion to proceed to the consideration of the House revenue bill. Another attempt will be made to bring the bill up for consideration, but the outlook is not very bright for its success under present conditions.

To all appearances the effort to curtail the power of the Committee on Appropriations in the Senate has met with a decisive reverse. The proposition of Senator Dubois, it will be remembered, involved taking from the jurisdiction of the Appropriation Committee all appropriation bills, except those for legislative, executive and judicial expenditures, for sundry civil expenses and for deficiencies. This proposition was not directly passed upon by the Senate, but those in favor of the maintenance of the old plan secured the reference of it to the Committee on Rules, which is to make a report upon the proposition at the beginning of the short session. The proposal is thus side-tracked for the session, and it is expected that it will ultimately fail, for even if there should be a report in its favor—an outcome regarded as very unlikely—the adherents of the existing system hope to prevent action upon it in the rush of business which usually marks the short session.

Washington advices indicate that the Secretary of the Treasury has received a number of applications from prominent New York banks for authority to receive gold on deposit from bond purchasers, but the Secretary has decided to decline the request. It is regarded as probable, however, that some of the depository banks will be allowed to temporarily receive deposits in excess of normal limitations. At present the government has no need of large amounts of currency, and by leaving large balances in depository banks the strain of the contraction of the currency consequent upon the sale of the bonds will be in some measure relieved.

Attorney-General Harmon has sent to the House, in response to a resolution of that body, a report regarding the enforcement of the anti-trust law of 1890. He says the law as construed by the Supreme Court does not apply to the most complete monopolies acquired by unlawful combination of concerns which are naturally competitive, though they, in fact, control the markets of the entire country, if engaging in interstate commerce be merely one of the incidents of their business, and not its direct and immediate object. The virtual effect of this is to exclude from the operation of the law manufacturers and producers of every class, and probably importers also. The Attorney-General says that the limitations of the present law enable those engaged in combinations of the kind intended to be reached by the law to escape punishment, and suggests that Congress may do something to fill the gap left under exisiting conditions by making it unlawful to ship from one state to another, in carrying out or in attempting to carry out designs of such organizations, articles produced, owned or controlled by them or any of their members or agents.

Arizona's chances of being admitted to statehood seem to have disappeared for the present with the adverse vote in the House Committee on Territories this week. The bill admitting the territory to statehood was defeated on a close vote, but it seems to be generally recognized that the action of the committee is decisive of the matter, and that the disposition made of the case of Arizona will be a precedent as regards New Mexico and Oklahoma. Perhaps the most weighty objection urged against the statehood bill was the practical certainty that the admission of the territory would add to the weight of the free coinage element in the Senate.

The reading of the Queen's speech opening Parliament, on Tuesday, was looked for with more interest than it has attracted for many a year. For a great number of Englishmen and for all Americans, of course, the reference to the Venezuelan question constituted the chief topic of concern. The speech declared, in substance, that the government of the United States of America having expressed a wish to coöperate in the termination of the differences which have existed for many years between her government and the republic of Venezuela upon the question of the boundary between that country and the colony of British Guiana, the Queen had expressed her sympathy with the desire to come to an equitable arrangement, and trusted that further negotiations will lead to a satisfactory settlement. An abundant commentary upon the speech was furnished in the addresses of a number of prominent members of Parliament. Particularly noteworthy was the statement of Mr. Balfour, that there was not the slightest intention on the part of England violently to attack the substance or sense of the Monroe doctrine, and Lord Salisbury's declaration that considering the position of Venezuela in the Carribean sea, it was no more unnatural that the United States should take an interest in the matter than that Great Britain should take an interest in Holland and Belgium, and that from that point of view he trusted that the negotiations would continue.

One of the most satisfactory incidents in the course of the controversy was disclosed in the correspondence made public in England this week. It appears that on the 3d inst. Ambassador Bayard addressed a note to Lord Salisbury suggesting that the commission appointed by the President to inquire into the boundary question would be grateful for such assistance in ascertaining the facts in relation to the dispute as could be obtained by the friendly coöperation and aid of the governments of Great Britain and Venezuela, and requesting that, if entirely consistent with his sense of international propriety, the commission may be furnished with such evidence as may be within the power of her majesty's government, as well as for any facilities which may be conveniently extended to assist the commission in the purposes of its institution. To this request Lord Salisbury returned a prompt and courteous affirmative response, which, taken in connection with Mr. Bayard's acknowledgment, leaves the correspondence between the two governments in an atmosphere of peace and courtesy.

An inquiry was lately made by the House of Representatives as to whether the present provisions for the safety of the public in ocean travel are adequate and are strictly carried out. The Treasury Department has sent to the House a report by the supervising inspector of steam vessels to the effect that the law is entirely adequate and, as far as his records show, has been properly carried out. The records of American ocean steamers, he says, fail to show a single case of loss of life through lack of the equipments required by law, except in cases where such equipments have been lost or rendered useless at the time of the disaster. In view of the fact, as shown by experience, that in case of danger to the ship arising from a heavy gale of wind, lifeboats and rafts would be swept overboard long before the ship itself could suffer, the inspector does not recommend legislation to restrict vessels to the carriage of only so many persons, passengers and crew, as shall only equal the carrying capacity of the lifeboats and rafts they can practically make available. He submits, for the information of timid persons, a statement from official records, showing that, as a rule, life is safer to-day on an ocean steamer than when traveling by railroad or any other method of locomotion, even safer than is pedestrian travel in large cities.

The report of the Nicaragua Commission was sent to the House this week by President Cleveland. The estimate as to the cost of the work—over $133,000,000—has for some time been public property, but there are some points in the report information as to which has not leaked out hitherto. The commission finds that the most serious problems affecting the design and construction of the canal system at the present time, are those which are involved in the heavy rainfall and consequent discharges from the lake and streams, whose variations of surface and volume must be taken into account. A record of nearly 25 feet of water in a year on the Carribean coast diminished to 5½ feet between the lake and the Pacific needs no comment, the commission says, to indicate the important results that must ensue with reference to matters of local drainage and engineering construction.

In his annual report just submitted to Secretary Olney, Director Furbish, of the Bureau of American Republics, renews the suggestion heretofore made that a meeting of the representatives of the governments forming the international union should be held for consultation as to the future work of the bureau. According to the report, while the republics in the western hemisphere, except Chili, were originally parties to the organization of the bureau, Guatemala, Honduras, Mexico, Nicaragua, Paraguay, Peru, Salvador, Uruguay and Venezuela alone paid their quotas for its support in 1894, and that in 1895 only two—Honduras and Venezuela, and the latter only in part—liquidated their debt to the United States for advances made. Apparently the bureau is not very enthusiastically supported by the South American republics.

BOND ALLOTMENTS AND PAYMENTS.

Last Saturday saw the announcement of the allotments to subscribers to the new government 4 per cent. loan, and during the present week the payments of gold into the Treasury by the successful bidders has gone on steadily. The total amount of specie paid in on this account has been no less than $38,000,000, and it is known that in a surprisingly large number of cases the privilege of paying for the bonds in installments, in accordance with the Secretary of the Treasury's supplementary circular, has not been taken advantage of. This is perfectly natural in view of the fact that a great many bidders had provided themselves with the full amount of gold needed in advance of putting in their applications, while others have perhaps been influenced by the comparatively high prices the bonds have unexpectedly commanded in the market, and the large and eager demand which exists for them at such quotations. This has created an inducement to procure the gold forthwith and realize any profits between the price at which the bonds were alloted and the market quotations for them.

It may be presumed that the same cause has also been effective in causing withdrawals of gold from the Treasury itself for the purpose. There have indeed been plenty of open instances of this. Gold has virtually been taken out of the New York Sub-Treasury on the presentation of legal tenders for redemption, carried out of the building, and at once brought back and presented in payment for bond subscriptions. The total withdrawals since the closing of the bond subscription are about $15,000,000 in amount, and it is to be presumed that virtually all of it was taken for bond payment purposes. Under the defective law now existing there is no remedy for this, nor does the fact that bidders have in so many cases availed themselves of it, directly or indirectly, for the purpose of completing their contract with the government, excited any public demonstration of disapproval. In fact, it has been taken as a matter of course, and the bullion dealers and others who have engaged in finding legal tenders with which to secure the gold, have continued to reap a small harvest therefrom in the way of the premium charged, which has ranged from ⅜ to ⅝ of 1 per cent.

Notwithstanding these withdrawals, the Treasury gold has been notably increased. Its lowest point in the present period of depletion was on Friday, February 7, when it stood at $44,563,493. On Friday, February 14, it was approximately $76,500,000, a net gain of $32,000,000. This, taken in connection with the question of withdrawals above referred to, has again directed attention to the question of whether the popular loan, so-called, has really been an advantage to the Treasury. The opinion in financial circles is certainly adverse. It is pointed out that a contract with a responsible banking syndicate like the one formed by Mr. Morgan in the early stages of the present bond issue would have involved a condition that the syndicate should procure its gold elsewhere than from the Treasury itself, and that this would have saved the Treasury a net amount of not less than $25,000,000 virtually wasted in the withdrawals.

Apart from this, there is also material for reflection in the character of the allotments. On the final distributions of the amounts the syndicate composed of Messrs. J. P. Morgan & Co., the Deutsche Bank, the National City Bank of New York and Messrs. Fisk & Sons received only $33,000,000 instead of the 50 to 60 per cent. of the total amount they were expected to take. The other successful bidders, to whom the remaining two-thirds of the issue was alloted, comprised bankers, banks, foreign houses, corporations and firms more or less identified with the money market and its operations. The salient feature is that individual subscribers, in small amounts, applied for and received only $2,000,000 odd out of the whole amount. There were, doubtless, many more bids of this character among those who named a price below that of the Morgan syndicate's offer of 110.6877 for any part of the $100,000,000, and were, therefore, excluded in the allotment; but it is believed that the proportion of such tenders to the amount of the loan would hold good as regards the volume of all the bids.

INCREASING GROSS RAILWAY EARNINGS.

January gross earnings may be classed as very satisfactory, showing as they do a continuance and accentuation of previous favorable conditions and the practical disappearance of many unfavorable features which have marked gross earnings reports for the past few months.

The total earnings of 126 railroads for January aggregate $37,761,005, an increase over January a year ago of 11.3 per cent., this large gain being made on a total of 92,766 miles, an amount which may be regarded as truly representative of the country's operated railroads. Not only is the gain shown in January in excess of that recorded for some time past, but the number of large increases is larger and decreases are smaller in number and in volume than for many months past. In fact, the month just closed makes a very welcome showing as regards the small number of decreases and the trifling volume of the declines shown from January a year ago. During January last year railroad operations were about at low-water mark. The decrease shown from January, 1894, was, it is true, trifling in the aggregate, but the tendency toward enlargement of earnings had not yet begun, and it was not until well on into the spring of 1895 that the increases shown over 1894 began to be in any way noticeable.

The following table shows the earnings, monthly, for one year past, with comparisons for previous years, and well illustrates the exceptional position occupied by the month which has recently ended:

	1895.	1894.	1893.
February	Dec. 2.3	Dec. 12.0	Dec. 3.4
March	Inc. .6	Dec. 13.2	Inc. 4.7
Three months	Dec. .5	Dec. 12.6	Inc. 2.4
April	Inc. 4.5	Dec. 14.3	Inc. 3.5
Four months	Inc. .9	Dec. 13.4	Inc. 2.0
May	Inc. 6.5	Dec. 17.5	Inc. 9.3
Five months	Inc. 2.5	Dec. 14.2	Inc. 4.0
June	Inc. 8.0	Dec. 22.0	Inc. 5.6
Six months	Inc. 2.5	Dec. 15.4	Inc. 4.5
July	Inc. 15.6	Dec. 19.0	Dec. 4.0
Seven months	Inc. 4.8	Dec. 19.0	Inc. 2.0
August	Inc. 1.6	Inc. .9	Dec. 13.0
Eight months	Inc. 4.2	Dec. 14.0	Inc. .8
September	Inc. 4.6	Dec. 5.3	Dec. 9.5
Nine months	Inc. 4.5	Dec. 13.0	Dec. .5
October	Inc. 6.8	Dec. 3.1	Dec. 2.1
Ten months	Inc. 4.7	Dec. 12.2	Inc. 1.0
November	Inc. 6.3	Dec. 1.4	Dec. 6.6
Eleven months	Inc. 4.8	Dec. 10.9	Dec. 1.5
December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	1895.	1894.
January	Inc. 11.3	Dec. .5	Dec. 12.0

A year ago, it will be seen, the total earnings for January showed a fractional decrease from January, 1894, which, in turn, showed a falling off of 12 per cent. from January, 1893. The increase reported for January, 1896, it will also be noted, is larger than that shown for any month but one during the year 1895, the large increase reported for July being over a period in 1894 when decreases were exceptionally heavy. With the sole exception noted, we must go back to a period previous to 1893 to find an increase proportionate to that just shown. The following table shows the gains and losses during each of the past four months by groups of roads as compared with the entire year 1895:

	October, 1895.	November, 1895.	December, 1895.	Year 1895.	January, 1896.
Granger	Inc. 21.6	Inc. 20.9	Inc. 21.3	Inc. 7.6	Inc. 22.0
Central west'n	Inc. 7.7	Inc. 6.0	Inc. 6.2	Inc. 8.0	Inc. 8.2
Trunk	Inc. 5.8	Inc. 6.0	Inc. 7.3	Inc. 5.0	Inc. 10.0
Eastern	Inc. .4	Inc. .2	Dec. 1.1	Dec. .2	Dec. .3
Coal	Dec. 2.2	Inc. 6.4	Inc. 9.9	Inc. 6.3	Inc. 7.0
Southern	Inc. 6.0	Inc. 5.3	Inc. 5.8	Inc. 2.2	Inc. 10.3
Southwestern.	Dec. 4.8	Dec. 7.0	Inc. .4	Inc. 2.0	Inc. 4.5
Pacific	Inc. 8.6	Inc. 14.1	Inc. 17.0	Inc. 7.5	Inc. 17.0
Totals, U. S.	Inc. 6.7	Inc. 6.3	Inc. 8.7	Inc. 5.1	Inc. 11.3
Mexican	Inc. 13.3	Inc. 7.0	Inc. 11.1	Inc. 6.4	Inc. 5.7
Totals	Inc. 6.8	Inc. 6.3	Inc. 8.3	Inc. 5.2	Inc. 11.3

With few exceptions, it will be noted, the increases shown by groups of roads during the month of January were larger in volume than in any previous month for some time past, and the comparisons made with the gains by groups in the whole year 1895 are especially satisfactory and full of promise. The largest increase reported is, of course, that shown by the granger railroads, but the increase on the Pacific roads is also considerable. The percentage of gains reported on the trunk lines and by the southern roads closely approximates the aggregate percentage of increase in all roads. The only decrease reported by any group is that on the one eastern road, and that decrease is a trifling one. The gains shown on the Mexican roads, it will be noted, are rather small in preceding months but compare well with the aggregate increase for the whole year 1895.

Of the 126 roads reported only one-fifth show decreases, and, with two notable exceptions, those decreases are of very trifling character. These decreases, too, are found in the southwestern group, which, it will be remembered, during the last quarter of last year showed decreases as a result of the curtailed cotton movement and the delay in marketing of the corn crop. The absence of the Atchison system this month, as a result of discontinuance of publication of estimated earnings, no doubt renders the showing made by the entire southwestern group less favorable than it otherwise might if that system were included. The following table well illustrates the overwhelming number of large increases reported as compared with the small number of decreases:

Chicago, Milwaukee & St. Paul	$435,000
New York Central	327,000
Canadian Pacific	306,000
Great Northern system	231,000
Illinois Central	196,000
Missouri Pacific & Iron Mountain	163,000
Grand Trunk system	162,000
Northern Pacific	154,000
Chesapeake & Ohio	144,000
Norfolk & Western	122,000
Burlington, Cedar Rapids & Northern	113,000
Chicago Great Western	105,000
Minneapolis, St. Paul & Sault Ste. Marie	88,000
Southern Railway	87,000
Nashville, Chattanooga & St. Louis	80,000
Wabash	71,000
Mexican National	64,000
Missouri, Kansas & Texas	63,000
Louisville & Nashville	60,000
Chicago, Rock Island & Pacific	58,000
Flint & Pere Marquette	52,000
Total	$3,081,000
International & Great Northern	$53,000
Texas & Pacific	51,000
Total	$104,000

First in importance among the railroads showing heavy gains is naturally to be found St. Paul, followed by New York Central, Canadian Pacific, the Great Northern and the Illinois Central, in the order named, the increases varying from $435,000 in the case of St. Paul to nearly $200,000 in the case of the Illinois Central. Seven other roads show gains in excess of $100,000, and nine other roads show increases in excess of $50,000. Perhaps one of the most encouraging features, however, is that the proportion of these large increases to the whole is considerably smaller than usual, pointing to a very general tendency of all roads to increase in larger or smaller amounts. Four-fifths of the total gain of all roads is reported by twenty-one systems, leaving the remaining one-fifth of the increase to be accounted for by the smaller roads. The summarized earnings for January follow:

		Gross earnings 1896.	Gross earnings 1895.	Mileage 1896.	Mileage 1895.
19	Grangers	$6,443,412	$5,281,606	20,155	20,158
47	Cent. western	7,950,305	7,344,189	18,057	18,056
4	Trunk	5,355,288	4,805,861	6,432	6,432
1	Eastern	209,493	210,206	367	360
6	Coal	916,233	856,757	1,879	1,879
22	Southern	6,970,078	6,318,292	15,398	15,368
15	Southwest'n.	4,959,036	4,743,614	13,170	13,133
7	Pacific	3,411,306	2,911,233	13,362	13,238
121	Totals	36,215,151	32,531,358	88,760	88,624
5	Mexican	1,710,959	1,618,346	4,158	4,158
126	Totals	$37,926,110	$34,149,684	92,918	92,782

"GREENBACKS" AND AN ELASTIC CURRENCY.

To the Editor of BRADSTREET'S.

SIR—Your editorial commenting on Prof. J. Laurence Laughlin's article in the *Forum* on "Our Monetary Programme" overlooks one source of gold supply also overlooked by him. You agree with him that there are only two ways by which the Treasury can obtain gold. I refer you to the fact that in the "usual course of business" the banks have deposited gold with the Treasury in exchange for greenbacks as follows:

From March 7 to December 31, 1893	$57,451,196
For the year 1894	19,740,229
For the year 1895 to September 30	26,611,978
Total	$103,803,403

and since September 30, 1895, several millions more. So there is a third source of supply.

These deposits by the banks of gold for greenbacks were made in abnormal times, too; in normal times it was the common way the banks had of getting rid of useless gold and obtaining useful notes.

It seems, therefore, that it is not altogether a question of how gold is to be got into the Treasury, but how, when gotten, it is to be kept there. The simple fact is that our Treasury has no means of protecting its gold after it has once obtained it. The Bank of England, by manipulating its rate of discount, protects its gold, and the Bank of France, by exercising its option in paying it out or not, accomplishes the same result.

If our national Treasury could be invested with either of those privileges there would be no unreasonable depletion of its gold reserve.

The Professor's suggestion of a "full and sufficient gold reserve of at least $200,000,000 by the sale of bonds, the giving notice of the redemption on demand in gold of any and all kinds of government paper and silver money at numerous cities in different parts of the United States, the cancellation of all notes redeemed, and the repeal of the act of May 31, 1878, forbidding the retirement of United States notes," etc., if adopted would deprive the people of several very superior features of the present banking system, particularly the "lawful reserve" feature, which secures deposits, etc. That reserve fund consists now of more than half in legal tenders (greenbacks, etc.), and less than half in "coin"—the word coin including only $168,000,000 of gold in 3,706 national banks. There never has been a time when gold—and silver, too, if you please—was plentiful enough to maintain even a 10 per cent. reserve in "coin," to secure the enormous volume of deposits now held by the banks. If the greenbacks are to be withdrawn, the lawful reserve requirement which secures deposits will have to be withdrawn too. Many of our bankers and financiers do not seem to comprehend the whole question of our national finance, and they shout for the abolishment of the greenbacks, etc., overlooking the fact that their abolishment or cancellation would probably destroy one of the most valuable features of modern banking, and the national banks as well. It would seem better to utilize the greenbacks, at least. It may be that they can be made to answer all the needs of a currency. With this object in view, I suggest the following plan to make greenbacks an "elastic" currency, and at the same time to prevent them from being used in unduly withdrawing gold from the Treasury:

Invest the Secretary of the Treasury with authority to provide, in place of the present United States certificates of deposit, act of June 8, 1872 (now used by the banks for clearing-house purposes), certificates of deposit possessing like legal reserve functions, and in addition thereto bearing a sliding rate of interest feature, commencing at a minimum rate of say 2 per cent. per annum, which rate may be advanced, like the Bank of England rate, in the Secretary's discretion, whenever the conditions of the money markets threaten an undue withdrawal of gold from the Treasury.

First. When the conditions of trade are such that a congestion of funds lowers the loaning rates of money to a minimum of 2 per cent. per annum, the banks would deposit "greenbacks" in exchange for interest-bearing certificates of deposit, such "certificates of deposit" to count in the required lawful reserve the same as the certificates now in use. When loaning rates have been sufficiently stimulated by the advance so as to make the use of greenbacks more profitable than the holding of the interest-bearing certificates, the banks would redeposit such certificates and receive back therefor the greenbacks which the Treasurer had received and segregated for that purpose, the Treasurer to pay interest on all surrendered certificates on date of surrender thereof for the time they had been outstanding, according to the official rates of record.

We would then have a secure and "elastic" currency, moving back and forth between the Treasury and the banks, according to the requirements of trade.

Second. Whenever the international exchanges threatened undue exports of gold, the Secretary of the Treasury (with the consent of the President, if necessary) should have power to advance the rate of interest on the certificates of deposit above described whenever, in his judgment, the Treasury gold demands protection.

The power to stimulate the market rate of interest on loanable funds would have the same effect on the open loan market that the raising of the rate of discount by the Bank of England has, which results in protecting its gold reserves from undue depletion for export or otherwise. Whenever the rates of interest are advanced above the fixed minimum rate on certificates, the greenbacks will flow into the Treasury, and by contracting loanable moneys in the open market will raise the rate there and thereby restrain the use of greenbacks in the withdrawal of gold from the Treasury, because it will be more profitable to take out certificates for greenbacks than to pay greenbacks in for gold. And thus the gold reserve could be protected, and the greenbacks made into an "elastic paper currency" at a less cost to the people than if funded and cancelled as has been proposed. I, therefore, suggest that it may be possible to amend sections 5193 and 5194 of the National Bank act so that they shall read in effect as follows:

"The Secretary of the Treasury may receive United States notes on deposit from any national banking association in all the reserve cities, in sums of not less than $10,000, and issue certificates therefor in such form as he may prescribe, in denominations of not less than $5,000, payable on demand in United States notes, with interest at a minimum rate of 2 per cent. per annum, at the place where the deposits were made. The notes so deposited shall not be counted as part of the lawful money reserve of the association, but the certificates issued therefor may be counted as part of its lawful money reserve. And United States notes for which certificates are issued, or other United States notes of like amount, shall be held as special deposits in the Treasury, and used only for redemption of such certificates. Said certificates shall be redeemable at the option of the United States, in whole or in part, after six months' notice; and if called in, upon six months' notice, interest shall cease. And the Secretary of the Treasury may advance, from time to time, the rate of interest on the certificates of deposit herein provided, issued or to be issued at his discretion whenever, in his judgment, it may be necessary, for the purpose of protecting the gold reserve established for the redemption of the legal tender notes outstanding; provided, that such increase of rate shall not exceed the maximum rate of 6 per cent. per annum; and that whenever said rate shall exceed the minimum rate fixed by this act, he may, in his discretion, lower the rate of record, from time to time, until it shall have reached the minimum rate herein provided."

It is not supposed that this plan would prevent sentimental panics. Even the Bank of England has been compelled, at times, to whine for a "suspension of the bank charter" so that it could use uncovered notes. I mention this merely to show that any bank currency is imperfect, at times, and utopian in conception.

J. S. CASE,
Cash'r Second Nat'l Bank.

New York, February 4.

SOME FEATURES OF FOREIGN TRADE.

The December report of the Bureau of Statistics of the Treasury Department is a more than ordinarily interesting publication, showing, as it does, the movement of the foreign trade, outward and inward, for the calendar year recently ended. Previous reports of this bureau have familiarized us with the leading features of both our import and export trade, so that there is little really new and nothing that is surprising to be gathered from the present publication. The grand totals of our trade in the past year, however, possess considerable interest as showing the outturn of the year's transactions in foreign business. The total exports of domestic merchandise from the United States during the year 1895 aggregate $807,740,016, a hardly perceptible gain over the preceding year, and a much smaller total than in any previous year since 1891. Our imports, on the other hand, showed an immense increase, jumping from $676,312,941 in 1894 to $801,663,490 in 1895, a gain of 18.4 per cent. In spite of the immense increase in imports, however, the domestic export branch of trade is slightly larger than that of imports, exceeding the latter by about $6,000,000, while the total exports of foreign and domestic merchandise combined exceed the imports by over $23,000,000. The following table illustrates the movement of foreign trade during the past seven years, which covers the period previous to the boom years 1891 and 1892:

	Total exports.	Total imports.	Excess of exports.	Total foreign trade.
1889	$827,106,347	$770,521,965	$56,584,382	$1,597,628,312
1890	857,502,548	823,397,726	34,104,822	1,680,[illegible]4
1891	970,509,646	828,320,943	142,188,703	1,79[illegible]
1892	938,420,600	840,930,955	97,489,795	1,77[illegible]
1893	876,168,781	776,248,924	99,859,857	1,65[illegible]
1894	825,102,248	676,312,941	148,789,307	1,501,415,189
1895	824,862,475	801,663,490	23,198,985	1,626,525,965

The excess of exports over imports, however, it will be seen from the above table, was the smallest in 1895 of any year for seven years past, and our total foreign trade in 1894 showed a heavy shrinkage from the totals of 1891 and 1892. Our exports of merchandise have been the smallest of any year since 1888.

There is, of course, little new to say regarding the direction in which our import trade in 1895 increased over that of 1894. Largely increased takings of raw and manufactured textiles, such as cotton, flax, silk and wool, the latter being especially heavy, account for the greater part for the increase. Among other less important lines which showed enlargement, however, are chemicals, coffee, earthenware, hides and skins, iron and steel, pig tin, tobacco and wood. The only important items in which decreases are noted in our import trade in 1895 are sugar, tea and tinplate, by far the largest falling off being in the first named item.

It is, however, in the export branch of business that the most interesting features are to be found, and as illustrating this statement the following table of exports of products of agriculture and manufacture will be found instructive:

	Agricultural.	Manufacturing.	Total all exports.
1886	$524,680,986	$135,305,983	$699,519,430
1887	524,580,044	130,953,634	703,319,092
1888	491,381,608	132,775,393	679,597,477
1889	599,524,256	150,110,018	814,154,864
1890	628,779,597	157,126,803	845,999,603
1891	730,069,702	168,593,804	957,333,551
1892	712,539,832	152,397,392	9[illegible]
1893	619,135,633	177,347,876	854,[illegible]
1894	573,684,383	177,800,969	807,312,116
1895	545,714,375	201,152,771	807,740,016

The exports of products of agriculture, it will be seen from this table, were smaller in 1895 than in any previous year since 1888, while exports of manufactured goods were the largest for any year on record, pointing to the fact already remarked upon in these columns, that while our exports of products of the farm have shown a steady shrinkage of late years, our exports of manufactured goods, though of smaller relative volume, have shown a gratifying increase. While our exports of products of agriculture fell off from 71 per cent. to about 67.5 per cent. of our total exports, in the past two years the shipments of manufactured goods increased from 22 per cent. to nearly 25 per cent. of our total exports.

That this increase in the export of manufactured goods is not a temporary feature but has come to stay, seems evident from the gain shown over the years 1893 and 1894, when prices were at their lowest, and while prices in 1895 advanced sharply no perceptible influence seems to have been exerted upon the total volume of export trade in manufactured articles. Among the items of export showing increases in 1895, manufactured articles figure largely. Iron and steel, leather, mineral oils, chemicals and drugs, machinery, naval stores, oil cake and wood, all showed increases. Among the decreases, breadstuffs, provisions, copper, live animals and tobacco are especially notable. The falling off in exports of wheat and wheat flour was especially notable, while on the other hand the increased shipments of corn were a favorable feature.

AMERICAN TOBACCO'S YEAR.

Since the executive committee of the American Tobacco Company's board of directors took a somewhat unusual course, about two months ago, in announcing that the regular quarterly dividend on the company's common stock, due in February, would not be paid, the affairs of that company have been the object of both public and speculative attention. As the concern had paid dividends of 12 per cent. per annum on its common shares since its formation, in 1890, the action in question was taken as proof that the company's competitive war with the manufacturers of plug tobacco was having a serious effect on its finances. This was indeed the ostensible object of the change which reduced the stock from a 12 per cent. dividend basis to 9 per cent. for the year 1895. There was at the time a severe tumble in the market price of the stock, and Wall street indulged in not a few severe strictures on the course of the company's management, which, it was openly hinted, was influenced in the matter in question by speculative considerations.

The Tobacco Company's report of operations for the year ending December 31, 1895, has appeared this week. It would seem to be in line with the arguments advanced by the company's critics. The figures, in fact, on their face fail to show adequate reasons for the course above referred to. The comparison of income and disbursements for the year, in comparison with those of 1894 and 1893, is as follows:

Year.	1895.	1894.	1893.
Net earnings	$3,971,521	$5,069,415	$4,334,467
8% on preferred	958,440	954,800	956,800
Balance	$3,013,081	$4,114,615	$3,377,667
9% on common	1,611,000	12%2,148,000	12%2,152,500
Balance	$1,402,081	$1,966,615	$1,225,167

According to this the companies earned for the common stock during the year about 16 per cent., against 23 per cent. in 1894.

At the same time the report, though not particularly full, gives some details which modify the favorable impression produced by a first glance. It seems that the policy of absorbing other concerns is still in progress. During the year five outside concerns were taken into the combination at an expense of $1,340,000 cash and $273,000 of common and $152,000 of preferred stock respectively, the latter being in scrip convertible into cash or stock before January 1, 1897, at the company's option. The report also furnishes the information that, in the development of the brand of plug tobacco with which the company has invaded the province of the older manufacturers of the article in question, about $1,018,000 was expended in 1895. To what extent the retaliatory measures of the manufacturers of plug who have entered the field as competitors in the making of cigarettes (the original and principal industry of the so-called "Trust") does not appear. The fact, however, that the balance sheet shows a reduction in the item of cash from $1,909,000 at the close of 1894 to $800,000 in 1895 is somewhat significant, there being only about $200,000 increase in accounts receivable.

THE TREATY AS TO SEALING SEIZURES.

Reference has already been made to a treaty negotiated between the governments of the United States and of Great Britain relative to the settlement of the claims growing out of alleged illegal seizures of subjects of Great Britain in Behring sea. It will be remembered that, acting upon one of the provisions contained in the treaty, the Swiss Federal Council a short time ago decided that the President of the Swiss republic might nominate an arbitrator of the dispute as to the claims of the seized sealers. This treaty, information as to the provisions of which has up to the present been meager, was laid before the Senate in executive session this week, and Washington dispatches give a summary of the provisions of the convention, which was signed on behalf of the United States by Secretary of State Olney, and on behalf of Great Britain by Ambassador Pauncefote.

It seems that the treaty provides for the appointment of one commissioner by each government, and if these two cannot reach a conclusion, then an umpire, or third commissioner, is to be selected. If the two governments cannot agree upon this umpire, the convention stipulates that he shall be named by the President of the Swiss republic. Whatever may be agreed to by these commissioners is to be binding upon the two governments parties to the treaty. It is learned that the text of the treaty is unsatisfactory to the Senate Committee on Foreign Relations in at least one particular, in respect to which it is proposed to amend it. As it stands at present, the treaty provides for the finding of claims of the subjects of Great Britain against the United States for alleged illegal seizures, and ignores the possible existence of any claims of citizens of the United States against the Dominion of Canada or Great Britain. It is this provision which the committee proposes to amend before the treaty shall be presented for ratification, but, according to general opinion, there will be but little delay in making a report to the Senate in favor of ratification after the amendment shall have been agreed to. There seems, therefore, a fair degree of probability that the long-standing question of the claims for seizures will before long be taken entirely out of the domain of controversy.

THE INTERNATIONAL STATISTICAL INSTITUTE CRITICALLY VIEWED.

What may be fairly termed a critical review of the proceedings of the International Statistical Institute appears in a paper contributed by Professor Roland P. Falkner to the latest quarterly publication of the American Statistical Association. This body, some of whose proceedings were referred to recently in these columns, is supposed, doubtless with justice, to represent the highest level of statistical science in the different countries where special attention is paid to that branch of knowledge, and we believe it includes among its personnel most of the world's most distinguished statisticians. It has not, perhaps, been long enough organized as a body to have reached in its organization and methods of procedure the greatest point of advance of which it is capable, for the session held at Berne last year was only its fifth; but, be that as it may, the review of its work by such a man as Professor Falkner cannot fail to be suggestive and useful.

The labors of the session were divided into meetings of the general assembly and of four sections devoted respectively to statistics of population and to commercial, agricultural and social statistics. Many papers were read, and considerable time was devoted to the reports of committees and sections. According to Professor Falkner's view the programme was too crowded, one result of which circumstance was that discussion of the papers present was but little encouraged by the assembly. The papers read are grouped by the writer into four classes. The first of these dealt with demands for international statistics in various fields. Papers of this class, it is admitted, might be regarded as especially appropriate to the discussions of the institute, and this would have been the case had they contained plans and projects for the execution of the statistical researches demanded. Our critic, however, declares that they were in several cases limited to demonstrating that such researches would be valuable, and while he admits that in an ordinary assembly they might have been in place, he insists that in an assembly of specialists it was disappointing to listen for half an hour to the elucidation of some perfectly well known phenomenon which reached the weighty conclusion that a committee should be appointed to investigate it.

A second class of papers related to the interpretation of statistical results. As to these Professor Falkner contends that in an assembly devoted to the promotion of statistical methods they had properly no place, for the reason that while there might have been some excuse for them if they had applied new methods of analysis or novel groupings of phenomena already known, they did not as a matter of fact present either of these characteristics. The papers of the third class, it appears, had the merit of brevity, being confined to an account of the scope of statistical research and a record of the progress made in this direction in various countries. The fourth class of papers dealt with discussions of statistical methods. This category, Professor Falkner suggests, was not so well filled as it should have been. Accounts of the perfection of statistical method belong, he said, preëminently to the scope of the institute's work. In every country actively pushing statistical researches there is a constant advance in method. This has been the case notably in the United States, and, in the view of the writer, some of the recent work done in this country might properly have engaged the attention of the session.

Summing up the papers alone, it is the firm conviction of Professor Falkner that at least one-half of them were inappropriate and should have been omitted. If the institute is to maintain a higher level than more democratic bodies it is evident, he says, that it needs more direction. He thinks that the papers to be presented should first receive the approval of the bureau of the institute, and that the keen sense of the general secretary, the distinguished Italian statistician, Professor Bodio, would clearly separate the wheat from the chaff. Professor Falkner says that he does not presume to maintain that his eminent associates really produce chaff, but he contends that what may be wheat in other quarters may be chaff for the purposes of the institute. If, however, the bureau cannot undertake the supervision of all papers, he suggests that it should select one or two topics for discussion and that these should be discussed thoroughly by speakers selected in advance. According to the American critic, the real work of the institute was accomplished in the sections constituted for the study of motions presented. Apart from the merit of the strictures made by Professor Falkner, as such, his paper possesses very considerable interest as indicating that American statisticians are by no means lacking in critical spirit and that they are not willing to accept without consideration methods followed even by the most eminent of their fellow scientists abroad.

ANTHRACITE COAL METHODS.

A very timely contribution to current financial information is found in a series of articles upon "Anthracite Coal," by Mr. William Griffith, of the Pennsylvania Geological Survey of the coal region, the papers in question appearing in the New York *Bond Record*. The first of the series from this eminent authority appears in the February number of the periodical in question, and though devoted in the main to a geographical description of the districts of Pennsylvania in which the anthracite coal basins lie, and a history of the development of the industry, contains a great deal of information bearing upon the recent condition of the coal trade. Before taking up the facts in the latter connection, as shown by the writer in question, it may be interesting to note that he corrects some generally accepted ideas in regard to the time and place at which the practical value of anthracite coal as fuel became known.

It is commonly supposed that the industry dates from about 1820, when the Lehigh Coal & Navigation Company began to ship the mineral down the Lehigh and Delaware rivers to Philadelphia. The amount so transported and marketed in that year was 365 tons, and was greatly increased in a few years. Prior to that time, however, anthracite had been used locally in the forges of the frontier settlements, not only in the lower but in the upper Wyoming valley fields, and Mr. Griffith claims the honor of having first utilized it for the Connecticut settlers of the latter district. Moreover, he goes further than this, and demonstrates that as early as 1807 the firm of Abijah Smith & Co., of Plymouth, had engaged successfully in the business of shipping coal from their mine by the Susquehanna river to Columbia, Pa., and Havre de Grace, Md., and thence to Baltimore and New York., where they developed a regular demand for and trade in the commodity. This method of marketing anthracite was, however, superseded when the navigation of the Lehigh and Schuylkill rivers afforded more direct and easier egress from the mines, and the growth of the industry really dates from the generally accepted year 1820.

Interesting as these details are, they must, however, yield precedence to the actual conditions of a business and industry which, in 1895, involved the mining of 46,000,000 tons of the coal, and which, in respect to the value of the output, ranks second to bituminous coal among the mineral products of the country. On the causes which led to the recent demoralization of the trade Mr. Griffith is so clear and succinct that his remarks should be quoted in extenso. After remarking that the Pennsylvania anthracite fields are so small, and their area so well ascertained, that the increase in the trade has made them of immense value, he proceeds to say: "The management of the various transportation companies having access to this region evidently appreciated to the fullest extent the future value of this inviting monopoly, and foresaw the importance of controlling it. Accordingly, about 1874, they began to secure the controlling interest in some of the large existing mining corporations, and to purchase, in fee or by lease, all the individual coal lands attainable, so that at the present time by far the greater portion of the anthracite coal land is either owned in fee or under lease by the several carrying interests, or by sub-companies directly controlled by them. There are still many in-

dividual operators owning or leasing their own coal, but their output is nearly all tied by contract to the railroads they ship over. These contracts are mostly on a percentage basis; i. e., the railroads take the coal to market and pay the owners 60 per cent. of the tidewater price they receive for it, retaining the 40 per cent. for freight charges and selling expenses."

It is this policy, the writer declares, which renders the anthracite coal railroads masters of the situation. It was introduced by Mr. A. A. McLeod, when president of the Reading Railroad, and has now become an established usage, most of the contracts covering a number of years. Many of the operators not only have tonnage contracts with the railroads, but are obligated to the latter for advances of money, it having been the policy of the roads to secure the tonnage of individuals by such means. Of course the arrangement is one-sided, as the tidewater price of coal is the lowest, and the railroads dispose of a considerable portion of their shipments to the trade along their lines at better prices.

It will be plain, Mr. Griffith proceeds to say, "that on the above contract basis, when the tidewater price is low, not only the miners lose money, but the freight rates realized by the carriers shrink also." Good management would dictate restriction of the output within limits that would maintain the prices at a profitable point to all concerned, both miners and carriers. The unsuccessful attempts to do so in the past are referred to, and the great decline of anthracite prices in 1894–95 is referred to the mismanagement of the companies, "who, in a mad race to establish a high tonnage record as a basis for future business, flooded the market with coal, which was sold without regard to cost, and *their stockholders and other interests in the anthracite business lost one dollar per ton, or in the neighborhood of $40,000,000 in the year.*" The italics are Mr. Griffith's own. His article was evidently written before the recent meeting of the anthracite presidents, but while the same arguments which he sets forth have evidently influenced the anthracite managements to suspend hostilities, the serious questions connected with the matter have by no means ended. The question of the exhaustion of the supply is one of great importance, the present rate of consumption making it of immediate interest. This and other subjects will be treated of in the series of articles to which reference is made, and which will have a very decided interest, coming as they do from an acknowledged authority.

CIVIL SERVICE REFORM IN NEW YORK.

General attention as regards the progress of civil service reform is usually engrossed by the national bodies having to do with it either as promoters of the reform or as administrators charged with the duty of enforcing the reform laws. It is of interest to note, however, that in the most important state of the Union, whose politicians have been charged with the odium of making the spoils system a reality in politics, the reform is making very substantial progress. In the annual report of the New York State Civil Service Reform Commission attention is drawn to the fact that at the recent annual meeting of the National Civil Service Reform League, held at Washington, the state of New York was given the advance position among all the states for progress ahead made in the reform of its civil service. When it is remembered that until within a few years it held the least advanced position, the commission says that it will be seen that progress under the amended law and the constitutional provision has been most rapid.

An interesting showing regarding the progress of the reform during the year covered by the report is made in comparison with the corresponding statistics of 1894. By the report of 1894 the number of places in the civil service of the state was 5,370, divided as follows: Exempt by law, 114; Schedule A, 443; Schedule B, 815; Schedule C, 508; Schedule D, 2,060. The commission of 1894 had doubled the number of places in the competitive schedule over that of 1893, thus commencing the work which this commission has carried on. The present commission is able to make the following statements: Exempt by law, 115; Schedule A, 227; Schedule B, 1,702; Schedule C, 462; Schedule D, 2,907. It will be seen by this statement, that while Schedule A, the exempt class, has been decreased by 216 places, Schedule B, the competitive class, has been more than doubled within the present year, and increased by 887 places over 1894; that Schedule C, requiring no competitive examinations, has been decreased by 46 places, while there has been an increase in Schedule D, owing largely to the taking in under the provisions of the constitution of the Department of Prisons, before exempt, and the Long Island State Hospital. The number of competitive examinations held during 1894 was 39, and during the past year 58. The total number of applicants competitively examined in 1894 was 824, and during the past year 1,460. The total number of applicants for examinations of all kinds has been 2,948. The total number of appointments made from the eligible lists in 1894 was 183. During the past year the number has increased to 200.

The commission reports that it has, during the past year, held meetings to examine into the manner in which the law is enforced. The first inspection was made in New York, where it found the system in good working order, and all departments under its rules. In Brooklyn it is carried out, and the commission is satisfied with the work of the local boards of these two largest municipalities in the state. At Syracuse a defective system was found, but a disposition was evinced to correct it and bring it into full accord with the law. Such defects were pointed out, and remedies suggested. At Buffalo, under the stimulus of a most excellent and efficient civil service reform association, the public service has come to a point of high excellence, and the full requirements of the law are rigidly enforced. In Rochester little regard, it would appear, has been paid to the civil service law. Reports from the smaller cities appear to indicate, in the main, a steady growth in the observance of the law, and in some of them a reasonably full compliance. In these smaller cities the task is a more difficult one, owing to the fact that salaries paid are trivial, and there is little incentive for competition in securing the smaller appointments. The report says that the enforcement of the law has developed the fact that the requirement of an examination in itself works for the improvement of the state service, even though no other requirement were made, for only those who at least think themselves competent to fill the places for which they apply are willing to submit to the examination test. Under the old system they only asked of themselves as to their ability to draw a salary; under this system they must be confident of their ability to do the work.

DEFECTS OF SOCIAL STATISTICS.

In days like these, when the demand for statistics on almost all subjects is growing, there is naturally much indiscriminate use of figures. The validity of some kinds of statistics is not tested as it should be, and comparisons are made between statistics which afford little other ground for comparison than the fact that they are compiled by the same office at different periods. Some very remarkable conclusions are thus deduced, of which an example may be found in the deduction drawn from some criminal statistics that offenses are increasing in a greater ratio than the population.

Some words of caution in reference to the employment of certain classes of statistics were lately spoken by Commissioner of Labor Carroll D. Wright in a lecture before the School of Social Economics in New York. Commissioner Wright dealt in his lecture with the subject of social statistics. He pointed out that the statistics of births, deaths and marriages in the United States are very defective, owing to the fact that there are but few states having registration boards, and that in some of them the laws are not well enforced. This being so, the death rate given in cities is, he said, very misleading in many respects. The faults of enumeration, taken in relation to the faults in registration of births and deaths, lead to many erroneous conclusions as to the birth and death rates. The death rate is calculated with fair accuracy in a census year, because of the recent enumeration of the population, but in subsequent years the death rate is ascertained by estimating the actual number of deaths proportionately to the estimated population. Commissioner Wright quoted Dr. John S. Billings, an eminent authority on vital statistics, as saying that the federal census does not secure more than 60 or 70 per cent. of the deaths, while in states where the law requires returns of marriages they are often at least 10 per cent. out of the way.

Commissioner Wright said that the statistics of crime, pauperism and insanity are beset with many difficulties, and often lead to many false conclusions when comparisons are attempted, because more recent statistics are more nearly perfect than they were a decade or a generation ago, and the effort to compare imperfect with perfect, or nearly perfect, statistics results in a very wide variation from the truth. The difficulties, however, are greatly increased when criminal conditions are considered. A certain state, for example, has in its criminal code over 150 offenses defined as crimes and punishable as such, while another state has about 100 offenses so described and punishable. To compare the criminal statistics of these two states would be absurd, especially as the punishment for the same crime varies as widely as the number of crimes.

An illustration was taken from the experience of Massachusetts, where, during two decades ending in 1879, the total number of sentences for all classes of offenses showed an increase of 70.4 per cent., while the increase of population was only 50.4 per cent. It was shown, however, that 60 per cent. of the sentences during the twenty years were the result of legislation, a fact which must be taken into account in making comparisons, so that the statistics on their face gave a wholly wrong impression.

LOW RATES TO FARMERS IN ENGLAND.

Recent correspondence in the American railroad journals from London gives some interesting details of the steps taken by English railroad companies to alleviate the agricultural depression in the country districts of the mother country, and at the same time to develop their own traffic in such districts. One of the methods adopted is the lowering of tariffs on small parcels of farm products and the increase of the facilities for conveying them from the country to London or other large towns, the apparent object being to build up a direct business between the farmer and the city consumers of such articles. The Great Eastern Railway Company, for instance, which, it is stated, serves the most agricultural and, therefore, the most depressed counties of the kingdom, has entered upon an experiment of much interest in this connection. "At the beginning of December," says the London correspondent of the New York *Railroad Gazette*, "it introduced a new uniform tariff from the larger part of its district to London for farm produce in small consignments by passenger train. The rates, which in every case include free delivery to the consumer in London—it may be at a distance of six or eight miles from the company's terminus—are as follows:

Under 20 pounds	4d.
Over 20 and under 25 pounds	5d.
Over 25 and under 30 pounds	6d.

And so on up to a maximum of 60 pounds, for which the charge is 1s. Packages above 60 pounds are excluded from the tariff altogether. These rates are all at owner's risk. Further, the company stipulates that the carriage must in all cases be prepaid, and that the packages shall be boxes of a specified shape and size, fastened by nails and not by rope or cord. In order to prevent difficulty on this score the company itself has started box manufacturing, and has boxes on sale at all stations at a price far below what the farmer could buy them at elsewhere. The 20-pound size, for instance, costs 1½d., the 35-pound size 3d., and the 60-pound size 5d. The company hopes in this way not only to get good loading for its vans, but also to get rid of the constant difficulties attending the carriage of returned empties."

It will be observed that the free delivery of the goods to the consignee is an essential feature, though the English railway companies, as a rule, undertake this duty on all classes of freight as part of their contract.

The arrangement in question also applies only at stations served by the Great Eastern alone, and not where any competing companies enter. There seems, however, to be need of some organization which will bring the farmer into relations with the London consumer, and which will also undertake the collection of the price of the box and its contents, and remit the same to the consignor. The *Gazette's* correspondent, however, notes as the two remarkable features: First, that the tariff is so extraordinarily low, "that from stations distant, as many of those concerned are, 80 or 100 miles from London, it will probably in the future be cheaper to send farm produce in boxes by passenger train than by goods train at the ordinary tonnage rate; so low, moreover, that if the ordinary calculation be correct, which says it costs 3d. on the average to deliver a parcel in London, one can hardly see how it is to be otherwise than a dead loss to the company."

The same correspondent also states that

the London & Southwestern Railroad "has announced that with the beginning of the new year it will reduce its rates for fruit and vegetables in lots of 1 cwt. by an average of 25 to 30 per cent.; simultaneously it will put in force lower rates for the carriage of grain, oil cake, packed manures and hay and straw into London from stations distant more than forty miles. But the Southwestern, like the Great Eastern, confines its reduction to 'non-competitive' stations, a restriction which will, one cannot but think, puzzle not a little the average Englishman, who still firmly believes that competition is the surest method of obtaining a reduction of rates.

"A third and still greater company—the London & Northwestern—has promised considerable concessions to the farmers in Cheshire and North Wales who supply the great Lancashire towns. Lastly, the president of the Board of Trade has invited the chairman of the nine great companies entering London to meet him at an informal conference on January 30 and consider the situation as a whole. Whether liberal concessions are more likely to be obtained by a minister insisting on the solidarity of the companies or through direct negotiation of individual districts and trades with the company that actually serves them is, however, a point on which it is quite possible different opinions may be held."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

Returns to the Agricultural Department for January show the total number of horses to be 15,124,057; mules, 2,278,946; milch cows, 16,137,586; oxen and other cattle, 32,085,409; sheep, 38,298,783, and swine, 42,842,759. The average farm prices per head are estimated, for horses, $33.07; mules, $45.29; milch cows, $22.55; oxen and other cattle, $15.86; sheep, $1.70; swine, $4.35. The aggregate values are, for horses, $500,140,186; mules, $103,204,457; milch cows, $363,955,545; oxen and other cattle, $508,928,416; sheep, $65,167,735; swine, $186,529,745; grand total, $1,727,926,084. In number, horses have decreased 4.8 per cent.; mules, 2.3 per cent.; milch cows, 2.2 per cent.; oxen and other cattle, 6.6 per cent.; sheep, 9.4 per cent., and swine, 3 per cent., since January, 1895. The cotton states and a few of the Rocky mountain states show an increase in horses and mules; otherwise the decrease is general. Milch cows are more numerous in the northeastern or city supply states, also in Minnesota, the Dakotas and westward, but fewer elsewhere. Decrease in other cattle and sheep is generally distributed, except in the mountain region. Swine have increased generally throughout the east, south and west, with a falling off in the great central states. In reported price per head, horses, mules and swine are lower than in January, 1895, while milch cows, other cattle and sheep are higher.

The Secretary of the Interior sent to Congress for ratification this week an agreement entered into between the government and the Blackfeet Indians, in Montana, for lands ceded by the Indians to the United States. Under this arrangement the Indians agree to give up about 1,000,000 acres of mineral lands for $1,500,000, to be expended for their benefit at the rate of $150,000 per year, beginning in 1897. The lands are to be disposed of under the mineral laws, and sold for from $2 to $5 per acre. Secretary Smith declares himself firmly convinced that the better policy in such cases is for the government to take charge of and sell for what they will bring such lands as the Indians do not need, the net proceeds being placed in the Treasury of the United States to be expended for their benefit, and that if this course be not practicable in any given case, and it be thought best for the government to purchase any Indian lands at a fixed price, then care should be taken to make such provision for their disposal as will surely and fully reimburse the government the whole purchase price. In other words, the government should not be subjected to the loss of money in these transactions. While the Secretary approves generally the terms of the agreement, he says that the price proposed to be paid for the land is large, and that he is not satisfied that a sufficient quantity of the land will be disposed of to fully reimburse the government the amount to be paid. If, however, he says, a provision can be made authorizing the department to dispose of the land by immediate sale, in a body or in smaller tracts, at such prices as may be fixed by the Secretary of the Interior as will realize the full amount to be expended by the government, he would cheerfully recommend the approval of the agreement.

In this modern commercial age there is a constant and intense struggle between the different trade centers to acquire and hold a larger share of the general trade of the country. At the same time it is not always clearly recognized that the force of custom and convenience in trade are of the highest importance. New York's position as the leading commercial city of the United States is the subject of some misunderstanding on the part of business interests at other places. The import trade of the country is centered at New York, and Wall street, in its larger sense, is the financial center of the continent. Large as New York's manufacturing interests are, they are only incidental. A recent incident at a semi-public occasion in a neighboring city illustrates the reference to the preëminent position which New York takes. The occurrence is the more striking because it was a manufacturer of national reputation who stated the case for New York. As the incident has, so far as can be ascertained, escaped notice in the daily press, it may be worthy of reference. The occasion was the entertainment by a local body of a delegation of leading business men from a distant city. One of the latter, in the course of his remarks, referred to the fact that the people of his section were practically unaware of the existence of the business interests of the northern manufacturing city in question, or of the extent and variety of its manufactured products, and concluded with the natural and polite wish that direct business relations might be increased between them. One of the hosts on the occasion, a prominent business man and manufacturer, took occasion to say that, so far from not having business relations with the city he represented, the section from which the guests of the evening came, and all other parts of the country, annually consumed an enormous amount of its products—but purchased them at New York city. Here he touched upon the recognized fact that every manufacturer of note in his own city was represented directly or indirectly at New York, and sold its products in the New York market. By this means they came in contact and entered into competition with the manufacturers of other sections who are likewise represented at the metropolis, making the latter a general commercial clearing house for the industries, as it is for the finance of the land.

Some time ago the Senate adopted resolutions asking the President for any information he possessed concerning reported attempts to establish post routes by Great Britain or Canada over or upon United States territory, and also respecting any attempt to assert claims to territory of the United States in Alaska. In response to these resolutions the President this week sent to the Senate a report from the Secretary of State, with accompanying correspondence, showing that the State Department is not officially possessed of any diplomatic correspondence concerning the establishment of British post routes by Great Britain or Canada, and that the only information bearing on the subject is contained in a letter from Postmaster-General Wilson, in which he says that one round trip by carrier was contemplated by the Canadian postal authorities from Victoria, B. C., to Fort Cudahy, also in Canadian territory, via Juneau, Alaska, in United States territory. Secretary Olney also says that the department is not officially possessed of any authentic correspondence or other information respecting any occupation or attempted occupation by other means than the establishment of post routes of any portion of United States territory in Alaska by the civil or military authorities of Great Britain or the Dominion of Canada, and the only instance having a remote relation to the subject was the request made to the United States authorities, and which was granted, that twenty Canadian mounted police be allowed to pass through Seattle, Wash., and St. Michaels, Alaska, on their way to Canadian territory in Alaska. In conclusion, the Secretary says that the Department of State is not officially possessed of any diplomatic correspondence or other information respecting any other attempt of Great Britain or the Dominion of Canada to assert any claims to territory of the United States in Alaska either by occupation or attempt to occupy such territory or otherwise.

According to the annual report of the Massachusetts Railroad Commission on street railways eleven companies were chartered last year, six of which are being operated, while four have not been begun. The roads built last year made 149 miles of track. Massachusetts companies now own 1,155 miles of track. Gross assets of the companies were, September 30, $56,212,670. The total income from all sources for the year ending September 30 was $13,246,371; expenditures, $12,595,212, leaving a net balance to carry to the surplus of $651,159. Cash dividends of $1,606,196 were declared. The report says that the growth of business was almost phenomenal. There were carried the previous year, in round numbers, 220,500,000 passengers; last year, 260,000,000, a larger increase than in any two preceding years combined. Of the 39,500,0000 additional passengers carried nearly 29,000,000 were carried on the railways of the eight largest established companies. Over 18,200,000 additional passengers were carried on the lines of the West End Railway alone. This company carried the last year 155,231,506 passengers, nearly 60 per cent. of the whole number carried on all the street railways of the state. The whole number of persons injured in connection with the street railway operation was 1,507, of whom 25 received fatal injuries.

CURRENT BUSINESS NEWS.

Industrial.

The local mills of the Illinois Steel Company, in Joliet, Ill., resumed operations Monday. The wage question has been settled with the men, and 2,500 will be given employment.

The estimated wool product of the United States in 1895, sheared, butchered and pulled, is 309,748,000 pounds.

A musical instrument factory at Elkhart, Ind., "in which profit-sharing was established in 1892, has thus far distributed among its employees about $58,000."

Arrangements have been concluded to place in operation this week the Fort Payne Steel Mills, at Fort Payne, Ala. The mills were built eight years ago at a cost of $300,000, but were never operated because of the collapse of the Fort Payne boom. "Low silicon iron from Birmingham, which it was discovered last summer could be made from ordinary Alabama red ores suitable for conversion into basic steel by the open-hearth basic process, will be used."

The New York city cigar manufacturers held their fifteenth annual dinner this week. The cigar trade in New York city represents a capital of several millions of dollars. There are 500,000,000 cigars produced every year here, yielding a gross revenue of $15,000,000.

The production of pig iron fell off sharply in January, as expected, the weekly capacity of the furnaces in blast being 9,000 tons less per week compared with the report January 1. The production has fallen every month since October, when the output was 217,306 tons weekly. Stocks have declined during four months about 176,000 tons, and prices, since the new year began, have been somewhat higher.

The Pennsylvania Railroad Company has awarded contracts for 31,000 tons of steel rails, divided as follows: Cambria Iron, 6,000 tons; Carnegie, 5,000; Pennsylvania Steel Company, 6,000; Lackawanna, 6,000. All these rails are to be used on the lines east of Pittsburgh, and contracts have also been made with the Carnegie for 4,000 tons, and Illinois Steel Company for the same amount, to be used on the lines west of Pittsburgh, the price paid being $28 a ton to all companies except the Illinois Steel Company, which gets $29.

According to a dispatch from Houghton, Mich., steps have been taken for the consolidation of the Huron, Isle Royal, Portage, Sheldon and Columbian copper mines, near Houghton, which have been idle for several years. These mines will now be worked to their fullest extent.

The paper-mills soon to be established at Waycross, Ga., will utilize the palmetto plant, which grows in profusion in that section.

Between four and five hundred weavers of the York Corporation in Saco, Me., have stopped work in a sympathetic strike this morning on account of the discharge of J. J. Whalen, president of the local weavers' organization. Mr. Whalen and his wife came to Saco and obtained work in the York mills about two weeks ago. Since that time they have been organizing a branch of the National Textile Workers of America among the weavers here. This morning the company discharged both Whalen and his wife. On learning this the other weavers immediately left their looms. This action will probably result in a shutdown of the entire corporation.

Commercial.

Assistant Secretary Hamlin has instructed Collector Richardson, at Gloucester, Mass., to levy duty on all frozen herrings imported from foreign waters. This action is taken to test the question whether frozen herrings, the product of American fisheries, are subject to duty.

A Minneapolis dispatch says that, with the exception of one Wisconsin town, all the firms in the northwest territory have promised to coöperate with the local lumbermen in curtailing the lumber cut. The object is to work off a surplus which has been piling up since 1891.

The harbormaster at Tacoma makes the following report regarding the ocean commerce at that port for the month of January, 1896: Imports included cargo, via Northern Pacific steamship Hankow, from China and Japan, valued at $375,000. Exports consisted of 227,006 bushels of wheat, valued at $122,489; 31,406 barrels of flour to China and Africa, $77,101; 18,100 tons of coal, $54,300; 4,935,000 feet of lumber, $48,450; general merchandise to China and Japan, $115,322, and general merchandise to British Columbia, $25,691, making a total of $443,353. Registered tonnage inward for January last, 37,189; cargo tonnage inward, 4,375. Registered tonnage outward, 36,444; cargo tonnage outward, 38,712. Deep sea arrivals, 28, and departures, 27.

In a letter to the *Connecticut Farmer* a correspondent says that a few tobacco growers in Connecticut and Massachusetts have formed a joint-stock company, with $10,000 capital, for the purpose of selling tobacco for farmers on commission, as any leaf house would do. "Selling tobacco for others on commission is not a new business. The experiment consists in substituting a joint-stock company, owned and controlled by farmers, instead of a private individual or firm of tobacco brokers." The new concern will be called the New England Tobacco Leaf Company.

Pacific coast grain men say there is a great shortage there, and that their surplus will go to other than European ports. San Francisco stocks, February 1, were 4,581,200 bushels, against 10,503,000 bushels a year previous. The continent is only a moderate purchaser.

The newly organized New York City Mining Exchange opened for business this week with a membership of 100. Isham B. Porter is president.

A report says the prominence which is being assumed by the southern ports as outlets for the exports of grain and flour is worthy of note. The railroads to the gulf, especially, are making bids for the grain business on terms "that are diverting to their lines a large share of the traffic of certain sections, which has hitherto very largely gone to more northern ports."

Home consumption appears to be absorbing wheat supplies "east and south of Chicago." Cash wheat commands a premium. Millers report running on full capacity and shipping more flour to more winter wheat points than ever. Texas and Kansas, Kentucky and other states "are the buyers."

Thomas' *Produce Report*, San Francisco, says that the "general result of the rain, more particularly for points south of here, has been beneficial for all parties concerned, and 'all parties concerned' means every man, woman and child in the state of California. While there has been a little too much rain up the Sacramento, and generally to the north of here, flooding islands and low land, we hear no complaints of damage being done to growing crops on the higher lands."

United States Vice-Consul Bondinel, at New Chang, reports to the State Department that now that the Japanese have evacuated the Manchurian peninsula and the Chinese are resuming possession, there will be a demand for cannon, small arms, ammunition, smokeless powder and other military stores to replace those carried off by the Japanese. There may also be an opening for grinding, spinning, mining and other machinery, and the vice-consul suggests that if prices are quoted to him or goods laid down in New Chang harbor, but not landed, he may obtain orders for American firms.

Financial.

The following securities were sold at auction this week at New York:

800	Shares Memphis & Charleston Railroad Company, $25 each (hypothecated)	8½
60	Shares Sherman Bank, $100 each (hypothecated)	100
$2,000	Cleveland, Columbus & Indianapolis Railroad Company consolidated 7 per cent. bonds, due 1914 (hypothecated)	126½
$10,000	Reorganization Certificates of the New York Perry Coal and Iron Company, and two Certificates, $300 each, for coupons of the New York Perry Coal and Iron Company, subject to assessment levied	$65
22	Shares Staten Island Railway Company	$50 per share
50	Shares Germania Fire Insurance Company	195
5	Shares New York & Boston Insurance Company	$11 lot
$6,000	The American Rolling Stock Company 5 per cent. Car Trust certificates	$1,500 lot
100	Shares National Butchers' & Drovers' Bank	146
$5,000	Western Gas Co. of Milwaukee, 1st 5 per cent.	88¼
$5,000	Fort Wayne Gas Company 1st 6 per cent	85¾
100	Shares American District Telegraph Company	33
100	Shares New York, Chicago & St. Louis Railroad, 2d preferred	28½
70	Shares Maryland Coal Company, preferred	53
1,500	Shares The Akron Street Railway & Illuminating Company	$1,000 lot

The names of the 781 successful bidders for United States bonds have been announced. The amount of the bonds aggregated $100,000,000, for which the Treasury will receive, in round figures, about $111,000,000. The amount awarded to the Morgan syndicate is $33,179,250.

The Canadian Pacific Railway Company has declared a dividend of 2 per cent. on its preferred stock and 1½ per cent. on its common stock, payable April 1.

The Third Avenue Railroad Company has declared a quarterly dividend of 2½ per cent., payable February 28.

A dividend of 2½ per cent. in cash has been declared upon the capital stock of the Illinois Central Railroad Company, payable March 2, 1896, to stockholders of record on February 8.

The government appraisers met at New York February 11 and decided that crude asphaltum should be admitted free of duty. "Representative Bowers, of California, says that this will be a severe blow to the asphalt industry of his state, and he has presented a bill placing a duty of 10c. per ton upon imported asphalt."

The Illinois Steel Company has declared a quarterly dividend of 1½ per cent., payable April 1, to stockholders of record March 15.

Railroads.

The Illinois Central Railroad Company reports gross and net for six months ending December 31, 1895 and 1894, as follows:

	1895.	1894.	*Increase.*
Gross receipts from traffic	$11,265,212	$9,828,006	$1,437,206
Less— Operation expenses and taxes.	7,209,992	6,960,447	249,545
Excess receipts over operation expenses and taxes.	$4,055,220	$2,867,559	$1,187,661

The statement of the Canadian Pacific Railway for the year ended December 31 shows:

Gross earnings	$18,941,036	$18,752,167	Inc. $188,869
Operating expenses.	11,460,086	12,328,859	Dec. 868,773
Net earnings	$7,480,950	$6,423,308	Inc. $1,057,642
Other income	112,246	333,826	Dec. 221,580
Totals	$7,593,196	$6,757,134	Inc. $836,062
Dul., S. S. & Atl	440,667	....	Inc. 440,667
Total income	$8,033,863	$6,757,134	Inc. $1,276,729
Fixed charges	6,659,478	7,283,866	Dec. 624,688
Balance	$1,374,385	*$526,732	Inc. $1,901,117
Dividends	1,231,960	1,881,960	Dec. 650,000
Surplus	$142,425	*$2,408,692	Inc. $2,551,117

* Deficit.

The all-rail east-bound shipments of dead freight from Chicago last week were 80,078 tons, against 79,362 tons the previous week and 67,532 tons the corresponding week of the previous year.

The New York, New Haven & Hartford Railroad Company reports for the quarter ended December 31:

	1895.	1894.	*Changes.*
Gross earnings	$7,807,433	$7,142,664	Inc. $664,769
Operating expenses.	6,019,533	4,911,205	Inc. 1,108,328
Net earnings	$1,787,900	$2,231,459	Dec. $443,559
Other income	170,987	127,933	Inc. 43,054
Total income	$1,958,887	$2,359,392	Dec. $400,505
Charges	1,845,877	1,398,003	Inc. 447,874
Surplus	$113,010	$961,389	Dec. $848,379

The Chesapeake, Ohio & Southwestern Railroad reports gross earnings for December of $225,969, an increase of $26,624 as compared with the same month of the previous year, and net $81,751, an increase of $13,548. For the six months ending December 31 the gross earnings were $1,338,149, an increase of $120,844 as compared with the corresponding period of the previous year, and net $490,371, an increase of $15,301.

The Long Island Railroad reports for the quarter ended December 31:

	1895.	1894.	1893.
Gross	$859,058	$862,515	$908,748
Operating expenses	640,077	624,007	686,634
Net	$218,981	$238,508	$222,114
Total income	256,831	257,630	232,505
Charges	270,937	263,120	245,130
Deficit	$14,106	$5,491	$12,625

The preliminary report of the Mexican Central for the year ending December 31 shows:

	1895.	1894.	1893.
Gross	$9,495,865	$8,426,025	$7,981,768
Operating expenses	5,599,390	5,459,675	5,136,181
Net (Mexican currency)	$3,896,475	$2,966,350	$2,845,587
Net (U. S. currency)	2,063,156	1,538,692	1,764,823
Charges	2,331,600	2,352,877	2,243,349
Deficit	$268,444	$814,185	$478,526

Judge Horton, Chicago, has decided that the stockholders of the Pacific Railroad Company are not liable individually for the debts of the company, which amount to $2,000,000. This refers to the Los Angeles cable road, which was bought in 1889 and reorganized under the laws of Illinois.

The Western Freight Association has adopted a 12 cent rate on wheat from Chicago to Kansas City, to be effective until April 30. The regular rate has been 24c. per 100 pounds, on account of which some mills in the southwest have had to shut down. The reduced rate was made to relieve these mills.

Miscellaneous.

Official reports from Commander Burwell, of the United States dispatch boat Dolphin, show that the survey of the Gulf of Honduras, upon which that vessel has been engaged for the past month, is progressing rapidly, and that accurate charts of this important harbor will soon be available. The Dolphin has erected beacons to mark the principal channels for vessels of deep draft.

Carroll D. Wright, chief of the Labor Bureau at Washington, Charles H. Morse, chief of the Michigan Bureau of Industrial Statistics, and Thomas H. Dowling, commissioner of labor in New York, members of the executive committee of the National Association of Commissioners of Labor Bureaus, met at Harrisburg, Pa., February 12, and mapped out a programme for the annual convention of the association to be held at Albany, N. Y., on the 23d of June. It was decided to present, as one of the questions for discussion, the investigation of municipal ownership of water, gas and electric light plants. It is understood that the question shall not be considered either for or against such ownership.

New York is one of five states—Washington, Minnesota, Illinois and New Jersey being the others—which make Lincoln's birthday a legal holiday, and it was celebrated as such for the first time on Wednesday. There were several commemorative meetings and dinners.

After three months' consideration, Attorney-General Maloney, of Illinois, has announced that in his opinion the proposed consolidation of the principal gas companies of Chicago, commonly known as the Gas Trust, was illegal, as under the laws of Illinois not more than two corporations can become consolidated.

The World's Fair Board of Control, which is the executive body of the Columbian Commission, was in session at Washington yesterday transacting various odds and ends of business that yet remain undisposed of. "One of the board's duties is officially to promulgate the award of the 23,000 to 25,000 medals and diplomas that were awarded to exhibitors at the fair. The cases for the medals have been finished, and it is expected that everything will be ready in less than a month."

A petition was introduced into the Massachusetts legislature yesterday "praying that the manufacture and sale of acetylene gas be prohibited, on the ground that it is dangerous to life and property. It is also asked that the storing of the chemicals from which it is manufactured be forbidden. A committee of the legislature is suggested to investigate and report on the matter."

The Chattanooga *Tradesman's* reports show that the approach of planting time is bringing out the cotton remaining in the hands of the planters, who find prices are satisfactory. It is believed that a very large crop will be made this year.

Foreign.

The British government has revoked the authority granted to the British South Africa Company to rule over the Ikanning and Montsfoa districts of South Africa.

The total output of lumber from all the mills on the Ottawa river, Canada, during 1895 amount to 627,000,000 feet. There are twenty-six mills, one with a capacity of 100,000,000 feet and five cutting 50,000,000 or over per year. Of this the United States purchased $2,161,515.56 worth during the year, besides a large amount of logs, timber, match blocks, pulp, etc.

The Japanese legation in Washington, on February 1, received an important cablegram from the Foreign Office of Japan, with directions to make it public, by the terms of which the rich Island of Formosa, which Japan acquired from China, will be opened up to trade and commerce,

Last year the Suez Canal Company's receipts were larger than ever before, due to the special traffic caused by the China-Japan war and the Madagascar and Abysinnian campaigns. Great Britain was the principal user of the great waterway, but the United States consul-general, Mr. Penfield, reports that it is significant that she had sixty-four fewer vessels than in the preceding year, while Germany, making a determined fight for Oriental trade, had eighteen more, and the increase of ninety vessels in the French traffic cannot be explained by wars. Of 3,434 steamers passing through the canal only four carried the United States flag.

The Welsh tinplate industry is said to be in a precarious condition owing to light demand, particularly from the United States, added to the low prices ruling. The number of mills closing down increases every week, and at the present time but a comparatively small proportion of the total capacity of the Welsh tinplate works is in active operation. The manufacturers claim that they find it impossible to continue working at the present prices except at a loss, which they are no longer inclined to sustain, while the workmen, instead of bearing their share of the burden, are adding to it by striking for the maintenance of the old wage scale which was in operation at a time when the price of tinplates was materially higher than at present.

The Panama *Star and Herald* says that the new Panama Canal Company are doing practical work on the canal. The number of laborers employed at the different sections last month, including Panama, Colon and La Boca, was 4,362. The work of deepening the channel on the Pacific side of the canal has just been resumed, and, as a whole, more considerable activity is apparent in connection with the work than has been seen for a long period.

A leading Japanese shipbuilding firm of Nippon are reported to be in the market for five steamers of from 5,000 to 6,000 tons.

A company has been formed in Berlin "to develop the mineral deposits in German East Africa."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Sale—Valuation—Appraisement.

In the case of The Bank of Williamstown vs. Webb, the Kentucky Court of Appeals held that where the seller and the purchaser of the furniture in a hotel agreed to have the property appraised by two appraisers, selected by them, and to be governed by their valuation, the purchaser was liable for the value thus fixed in the absence of fraud, and that in an action to recover the appraised value the court properly refused to transfer to equity upon defendant's motion, although fraud was alleged.

Attachment—Debtor—Evidence.

The Kentucky Court of Appeals held, in the recent case of Draddy et al. vs. Hisle, that where an attachment is obtained upon the ground that the debtor has not sufficient property subject to execution to satisfy the claim sued on, while it may be true the debtor is not required to take upon himself the burden, yet if he elects to go upon the stand as a witness he should be able to show that he has sufficient property to defeat the attachment, and if he fails to do this the attachment should be sustained.

Railroad—Accident—Trespasser.

The Kentucky Court of Appeals held, in the recent case of The Eastern Kentucky Railway Company vs. Powell, that a railroad station agent does not have implied authority to run a handcar on the company's road; that one who, upon his invitation, rides upon a handcar which he has placed upon the track without authority and assists him in operating it, cannot be regarded as an employee of the company, but is to be treated as a trespasser, and that even if he could be regarded as an employee the company would not be liable to him for injuries resulting from a collision of the handcar with a train on the track, unless the servants in charge of the train were guilty of gross negligence, as a railroad company is not liable for an injury to one servant by the ordinary negligence of another in the same department of service.

Consignment—Bill of Lading—Title.

The Supreme Court of Minnesota held, in the recent case of Freeman et al. vs. Kraemer et al., that where a consignor sold for cash and shipped goods to the consignee, drew drafts on him for the purchase price, and forwarded them with the bills of lading attached to a third party at the place of destination for collection, but the common carrier on the order of the consignee, without the production of the bills of lading, and without payment of the drafts or the purchase price, delivered the goods at the place of destination to the appellants, who in good faith and without notice had purchased them for value from the consignee, no title vested in the appellants, and they were liable to plaintiff in an action of conversion; that in this case the consignor conferred no judicial ownership on the consignee, and that an instrument issued by the common carrier to the consignor, consisting of a receipt for the goods and an agreement to carry them from the place of shipment to the place of destination is a bill of lading.

Savings Bank—Account—Payment.

In the case of The Metropolitan Savings Bank of Baltimore et al. vs. Murphy et al., recently decided by the Maryland Court of Appeals, and reported in the Baltimore *Daily Record*, it appeared that an account was opened by Michael Murphy and his wife in the Metropolitan Savings Bank and the following entry made on the bank book: "It is agreed that this account is opened subject to the by-laws printed on the first and last pages of this book, subject to the order of either, to belong to the survivor." The court held that the bank was justified in paying over to the wife, who was the survivor, the amount on deposit at the death of her husband. The court said: "The bank's instructions, in opening the account, were that said account shall be subject to the order of either husband or wife, and, at the death of either, the balance shall belong to the survivor. It is neither the object of the law nor the duty of the court to seek by narrow and technical construction the means of invalidating a contract clearly expressive of the intention of the contracting parties, and we think nothing could be clearer than the object and intention of the parties to the contract in the language employed by them in opening the joint account. * * * The property in controversy consisted of deposits in the appellant bank, which by the direction, authority and request of the said Michael, assented to by the appellant, were entered in the books of said bank to the credit of himself and wife with the understanding and contract with the bank, indorsed thereon as hereinbefore stated. The parties are *sui juris* capable of contracting and having actually contracted, the law exacts fulfillment, which the appellant has done. And we do not think after it has fully executed its part of the contract, it ought now to be required to pay to the appellees the money which it promised to pay, and had already paid to the appellant's testatrix, unless some legal requirement can be established demanding its payment to the appellee.

Railroad—Ticket—Stipulation.

The Supreme Court of Georgia held, in the recent case of The Georgia Railroad & Banking Company vs. Clarke, that in construing a special contract embodied in a railroad ticket and limiting the purchaser's rights, language of uncertain or doubtful meaning should generally be taken in its strongest sense against the company by which the ticket was issued or sold, and in favor of the purchaser, and that a railroad ticket entitling a designated person to a stated number of continuous trips, for each of which a separate coupon is attached, "between" two specified stations, and stipulating that "passage shall be taken only on such trains as stop at the above named stations," and also that "this ticket shall be good only for continuous trips between" these stations, confers upon that person, upon surrendering one of the coupons, the right to ride from an intermediate station to either of the two stations mentioned in the ticket, or from either of those stations to the intermediate station, provided he boards a passenger train which, upon its regular schedule, stops, not only at the two specified stations, but at the intermediate station also.

Nuisance—Prescription—Estoppel.

The case of Matthews vs. Stillwater Gas & Electric Light Company, recently decided by the Supreme Court of Minnesota, arose upon an order to enjoin the maintenance of a nuisance, caused by the escape of nauseous and offensive gases from a gas plant, and smoke, cinders and soot from an electric light plant owned and operated by defendant, into and upon the adjacent premises of the plaintiff. It appeared that the part of the plant constituting the gas works had been operated by defendant for fifteen years, but had been enlarged, and the mode of making gas changed within that time, and that the part of the plant constituting the electric light works had only been built and operated about eight years. The plaintiff did not object to the construction of the works while they were being built, but ever since they have been operated has continuously objected to and remonstrated against the act creating the nuisance. The court held that the plaintiff was not estopped by his conduct from objecting to the continuance of the nuisance; that the defendant had not acquired a right, by prescription, to maintain the nuisance; and that, in order to constitute an adverse user requisite to sustain a right, by prescription, to maintain a nuisance, the nuisance must have been continued in substantially the same way, and with equally injurious results, for the entire statutory period.

Note—Usury—Administrator.

The Supreme Court of Georgia held, in the case of The Equitable Mortgage Company vs. Braswell, that where a promissory note is given for a loan infected with usury, and this is secured by a deed to realty, the latter is void as a conveyance, and cannot be treated as an equitable mortgage; that where, in such a case, the borrower dies, and in the course of administration the administrator of his estate sells the land so conveyed to a third person, the title of the purchaser as against the lender depends upon the validity of the deed taken by the latter as security for the loan; that if the deed was in fact usurious, the administrator could rightfully treat the property purporting to have been conveyed thereby as still the property of his intestate, and was authorized to sell the same without first offering to redeem by the repayment of the principal borrowed, with lawful interest; and that where such administrator brought an equitable petition against the creditors of his intestate's estate to marshal the assets, and prayed therein for an injunction restraining the creditor holding such deed from prosecuting his claim upon the note thereby secured otherwise than as a party defendant to such petition, and at the hearing of the application for an interlocutory injunction the evidence as to the alleged usury was conflicting, there was no abuse of discretion in granting such injunction, and thus preserving the status until this question could be passed upon by a jury.

BUSINESS NOTES.

Growth of Electrical Power.

The *Engineering and Mining Journal* says: "As an indication of the greater realization of the advantages in the use of electric power, the increase in consumption of energy for power work on the circuits of the Edison Illuminating Company is interesting. With no particular improvement to cause special attention and add to the number of users of electric power in New York city during 1895, the first ten months of that year saw an increase in power installations of nearly 50 per cent., or over 3,600 horse-power."

American vs. English Cannel Coal.

It would be difficult to realize that in spite of the excellent quality of cannel coal mined in this country the fire department of New York is for the first time in its history burning American cannel coal. Heretofore, no matter what the inducement might have been, English cannel coal has invariably been used, the price ranging from $13 to $16 per ton, or about four times more than a first-class hard coal. "Of course cannel coal, whether English or American," says the *Engineering and Mining Journal*, "is a more rapid steam generator, and that is the great point to be attained in case of fire, so as to bring into play the full power of the engine. The coal that has now displaced the English cannel coal comes from West Virginia, and in the test was found to be equal to it, with the result that as it could be delivered at from $3 to $6 less than the English coal the tender was accepted, with a considerable saving to the department."

Export Bounty On Wheat.

A California paper says: "The indefatigable David Lubin, of Sacramento, Cal., has had his export bounty proposition introduced in the House of Representatives by Mr. Johnson, of his state. It is House bill 2626, and has the merit of being short and straight to the point. It provides that fifteen months after the passage of the act the Treasury of the United States shall pay out of any moneys not otherwise appropriated an export bounty on wheat, wheat flour, rye, rye flour, corn ground or unground, cotton, hops and tobacco produced in the United States and exported by sea. The bounty named is 10 cents per bushel on wheat, 50 cents per barrel on flour, 10 cents per bushel on rye and 50 cents per barrel on rye flour, 5 cents a bushel on corn and 7 cents per cental on ground corn. This bounty is to be increased by 10 per cent. when the article is exported in an American vessel. The remaining provisions of the act are merely administrative."

Acetylene Gas.

The *Engineering Record* says: "If we compare pure acetylene and carburetted water gas, the former furnishes by far the greater quantity of light for the same money. The especially violent character of the explosions of certain mixtures of acetylene and air will always constitute one of the most serious objections to its use alone. To be sure, these explosive mixtures are sometimes formed with ordinary illuminating gas, but in this case the explosions are not so violent. The danger increases as the quantity of combustible gas necessary to form an explosive mixture decreases. In the case of acetylene only one-half the quantity of gas is necessary to form the most explosive mixture with air that is required if coal gas is used. The most serious objections may be urged against the scheme of reducing the acetylene to the liquid form and distributing it to consumers in cylinders. While such a plan is perfectly feasible, it does not appear that any possible advantages can offset the danger incurred, and a few serious explosions will probably end the matter."

British Merchant Shipping.

At the Royal United Service Institution, London, Commander W. F. Caborne recently read a paper on "Our Seaborne Commerce and Mercantile Marine." The lecturer said the total value of the import and export trade of the United Kingdom in 1894 was £761,158,361, and if to this were added the value of the seaborne intercolonial and foreign trades of British colonies and dependencies, the estimated value of the merchant shipping of the United Kingdom, and the estimated value of the merchant shipping of the British colonies and dependencies, a grand total was arrived at of a little over £1,097,000,000 to represent its shipping interests, exclusive of coasting trades. During the great war of the early part of the present century the country was practically self-supporting with regard to the principal articles of food consumption, but it was now absolutely dependent upon external supplies, and the very life and existence of the kingdom depended upon its maintaining a large, powerful and efficient navy, wherewith to keep command of the sea. The spectacle presented to the world by a country containing only 39,118,000 inhabitants presiding over the destinies of about 363,397,000 other members of the human race, scattered in various parts of the globe—leaving aside the influence exercised over other nations—in itself furnished much room for reflection.

The Mercantile Exchange.

The *Shipping List* says: "As has already been announced, the movement to reëstablish the call on the floor of the Mercantile Exchange has been abandoned. The full story of the failure of the movement has, however, never been told. Some of the members profess to see in it a good joke upon the men who were interested in reëstablishing the sale of dairy products by public auction. It certainly is an illustration of the fact that some machinery is absolutely needful in any organization of men. The Mercantile Exchange is at present the only prominent exchange in the city that has not its ring of excited bidders daily fixing the prices of their goods by free and public competition. The members buy and sell privately at rates mutually agreeable, and these rates are not always made public. A daily call is a great stimulus to interest in an exchange, and for this reason many favored establishing it again. The reason it was discontinued, it is said, was because unscrupulous bidders used sometimes to buy and sell small lots at rates above or below the market price for the purpose of influencing the market price in their own interests."

Pacific Coast "Lumber Trust."

A Seattle, Wash., dispatch says: "The agreement made by the great lumber trust formed a week ago went into effect last night. Known as the Central Lumber Company of California, this trust represents nearly $70,000,000 of capital, and is by far the largest combination of trade interests ever formed on the Pacific coast. Its membership includes every mill, ship owner and wholesale and retail dealer of any prominence on the western slope of the United States, as well as those of British Columbia. All charters of vessels and sales of lumber must be effected through the Central Lumber Company, which regulates freights and puts the buying and selling price on lumber, regulating also the product of each mill and proportionate amount of lumber each vessel shall carry. Not only are the markets of the Pacific coast thus controlled, but lumber shipments to foreign countries are placed under the same restrictions. Every mill on the coast has its product regulated. The first order issued by the company was an advance in the price of lumber $2 a thousand, which will mean an increase in profits of many thousands of dollars during the coming year."

Peat Fabrics.

The *Industrial Record* says: "We learned through the public press quite recently that there were exhibited at the State Department, Washington, samples of various textile fabrics woven from peat fibers, and said to closely resemble Scotch tweed and camel's hair. It was stated that these specimens were received from the United States consul at Havre, France, and indicated the industrial possibilities of that material. Certain claims were made for fabrics made from this fiber, in that it could be bleached to a snowy whiteness and take unto itself any dye, especial advantage being claimed for the cloth for its antiseptic character and freedom from harboring disease germs. The item excited our curiosity sufficient for us to write to the State Department for samples of the fabrics, and seven samples were sent to us for our examination and return. We found the fabrics very much as described, so far as exterior appearance went, they having the effect of Scotch goods, and some of them the feel of camel's hair goods. Some of the samples were woven with a cotton warp, others with materials similar to the weft. They were all coarse goods made with yarn under one run fine, and woven in plain and twilled effects. All of the colors were dull, but possessed more or less attractiveness considering the material used. We found, however, upon a microscopic analysis, that the goods were not made wholly of peat, as we were led to believe by the items in the daily press. Far from it. That peat was used in their fabrication is undoubtedly true, but probably not more than one-fifth to one-third of the weight of the fabrics consisted of this material. The exact proportional quantity, of course, could have been ascertained by chemical analysis, which we did not have time to institute."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

Showing Stock Outstanding, Bonds, Mileage, Last Dividends and Total Sales, with Range of Prices in 1895 and 1896.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The general business situation throughout the country does not meet anticipations, and except at a few cities—Baltimore and Pittsburgh in the east, Chicago, St. Louis and Omaha at the west, Galveston, Chattanooga and Atlanta at the south—remains dull for the season, in most instances disappointingly so. Improvement in demand and prices is confined to hides, leather and boots and shoes, which are conspicuous in the short list of staples for which prices are higher.

Features of the situation are those resulting from unfavorable weather east and in the central west, reaction in prices of iron and steel, further complaints by woolen manufacturers, an outlook for more idle woolen machinery, a smaller total of bank clearings, continued stiffness, maintenance of full rates for loans notwithstanding the favorable inferences drawn from the heavy oversubscription to the government bond issue, and restricted production of pig iron.

January gross railway earnings are very encouraging, showing a larger percentage of gain than in any previous month but one for three years. Total January earnings of 126 companies, with 92,918 miles of road, aggregate $37,926,110, a gain of 11.3 per cent. over January a year ago, which in turn showed a decrease of five-tenths of 1 per cent. from January, 1894. Among the favorable features are gains in the southwest, where improvement had been impeded; large increases by the granger and Pacific roads, and more numerous large increases and fewer decreases reported than for months past.

Makers of cotton goods insist prices must advance or the cost of the raw material decline, in the face of which jobbers are cutting prices of cotton goods. Wholesale dealers in paints and glass anticipate heavy building operations in the spring, and report large orders placed in anticipation thereof. Lower prices are recorded for pork, lard, corn, wheat, wheat flour and live stock, in addition to cotton, steel billets and Bessemer pig iron, indicating a partial reversal of the general tendency of prices of leading staples to advance exhibited in late weeks. No change in quotations for coal, lumber, petroleum and print cloths is reported, while, in addition to the advances for leather and for hides, prices of oats, coffee and sugar are higher.

Stock speculation at New York shows a bullish tone on broader participation and renewed foreign buying. The London market shows more favor to American securities on the success of the bond issue here, and the demonstration that the House of Representatives will pass no silver legislation. Pressure to sell stocks has disappeared, and slight buying demands cause advances. The activity and appreciation has been well distributed between railroad and industrial stocks. The new government 4 per cent bonds, after selling at 117⅞, broke to 115⅞ on Thursday on reports that some parties who had received allotments had been unable to arrange for payment. Silver is very quiet. Foreign exchange broke below the export point on sales of bills against foreign subscriptions to the new bonds. Demand sterling is 4.87¾.

The total volume of bank clearings dropped off 10 per cent. this week, the total being $906,000,000. As compared with the second week of February, 1895, this aggregate shows an increase of 10 per cent., but it is 15 per cent. larger than in the corresponding week of 1894, 27 per cent. less than in the like week in 1893, and 35 per cent. less than in 1892.

The total number of business failures reported throughout the United States this week is 381, an exceptionally large number, the gain as compared with last week being 43. Most of the increase is explained by returns from the central western states and the Pacific coast. There are 85 more business failures this week than in the second week of February, 1895, 93 more than in the corresponding week of 1894, and 176 more than in the second week of February, 1893, while as compared with the second week of February, 1892, this week's increase is 121.

Receipts of wheat at Tacoma, Wash., have fallen off, as millers there have large supplies. At Seattle 82 carloads of wheat were received this week. Portland, Ore., reports that orders placed with wholesale seed merchants indicate the anticipation of a prosperous year. The weather in California has been very favorable, a condition from which the grain and fruit crops are expected to benefit.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,718,000 bushels, against 2,907,000 bushels last week, and as compared with 2,572,000 bushels in the week one year ago, 2,005,000 bushels in the week two years ago, 3,080,000 bushels three years ago, and as contrasted with 4,042,000 bushels in the corresponding week of 1892.

The condition of general trade throughout the provinces of Ontario and Quebec appears to be unfavorable. Sales are slow and collections somewhat discouraging. The long list of business failures is continued, and Dominion banks are curtailing credits. Favorable features of the business situation there seem to be small stocks in the hands of dealers and the absence of inflation. General trade seems to be improving in Nova Scotia, where the country roads are in excellent condition. Bank and Labrador codfish are lower, owing to importations from Newfoundland. The St. Johns, N. F., sealing fleet has finally been able to get through the ice, and sail. Bank clearings at Winnipeg, Toronto, Montreal, Hamilton and Halifax aggregate $19,206,000 this week, about 15 per cent. more than last, and more than 25 per cent. in excess of the corresponding total a year ago. In the second week of February, 1894, the total was $15,100,000, and in 1893 it was $18,000,000. One of the largest weekly totals of business failures ever reported for the Dominion is that for the current week, 70, as compared with 60 last week, 39 in the second week of February, 1895, 47 in 1894, 44 in 1893, and with 43 in 1892.

FINANCIAL.

The Money Market.

Any disturbance due to payments for government bonds has been slight. The New York loan market, in fact, has betrayed very slight effects from this cause. The naming by the Treasury of certain New York national banks as special depositories for gold paid in for bond subscriptions had a good effect. It is understood that about $15,000,000 was turned into these institutions under the arrangement in question. Call money has been plentiful at from 3 to 5 per cent. Time money is inactive, the demand being rather restricted, and rates are 5½@6 per cent. for thirty to ninety days, with 6 per cent. quoted for four to six months. The market for mercantile paper has been rather narrow, but some increase in the number of buyers can be noted. The supply of first-class names is also small, but the only rate quotable at present is 6 per cent. The operations of bullion and currency dealers in connection with the providing of specie with which to pay for bond subscriptions. The quotations for free gold have been ⅜@⅝, but the actual business has been relatively small. Withdrawals of gold from the Sub-Treasury at New York are thought to have been mainly on old contracts.

The New York Banks.

The bank statement of last Saturday was comparatively unimportant. The only noteworthy change of the items was in loans, which increased $1,289,100, indicating that the contraction caused by preparations for the bond subscription had relaxed. There were increases of $655,000 in specie and $485,200 in legal tenders, a total gain of $1,140,000 in cash holdings. Deposits were $2,324,700 larger, the surplus reserve being increased $559,025. The figures compare as follows with those of the preceding week:

	Feb. 8.	Feb. 1.	Changes.	
Loans	$448,431,800	$447,142,700	Inc.	$1,289,100
Specie	77,500,900	76,845,900	Inc.	655,000
Legal tenders	85,874,500	85,389,300	Inc.	485,200
Deposits	492,771,900	490,447,200	Inc.	2,324,700
Circulation	13,445,800	13,799,000	Dec.	353,200
Total reserve	163,375,400	162,235,200	Inc.	1,140,200
Reserve required	123,192,975	122,611,800	Inc.	581,175
Surplus reserve	40,182,425	39,623,400	Inc.	559,025

At the corresponding period last year the surplus reserve was $33,766,225, against $85,633,700 in 1894.

Silver.

Both the London and New York markets for silver were well-nigh featureless this week. Prices in the former showed a fractional advance, while in this city the current quotations have not changed, nor are there any factors in sight calculated to affect the market.

Foreign Exchange.

The market for foreign exchange has been in the main inactive, and has been weakened by offerings of bills drawn against foreign subscriptions for and purchases of the new government bonds. Actual transactions in this latter connection have naturally been involved in some secrecy, but it is believed that, in addition to the amount taken by the Deutsche Bank of Berlin—one of the participants in the so-called Morgan syndicate—and the amounts subscribed for foreign account by successful bidders among the banking houses, considerable purchases of the new bonds have since been made by European interests in the open market. Some estimates put this buying at between $5,000,000 and $10,000,000. At any rate, the exchange market, in the ab-

sence of any extraordinary pressure of commercial bills, has been weak and depressed. Posted rates on Monday were reduced ½c.—to 4.87 @4.88 ½—and remained at that level all week. Actual business in demand sterling, which was quoted at 4.88 at the close of last week, broke to 4.87¼, but recovered to 4.87¾, though some supplementary pressure was experienced from the sale of bills against foreign speculative purchases on the stock market on Thursday and Friday. A solitary shipment of $500,000 to South America was announced. The market on Friday was dull and barely steady with very light inquiry.

* Holiday.

Closing quotations on Friday for other classes of bills were: Cables, 4.87¾ @4.88; commercial bills, 4.85½ @4.85¾; francs, 5.18¾ @5.16⅞; reichsmarks, 94⅞ @95⅜.

The Bank of England rate remains at 2 per cent. The bank this week lost £485,284 in specie, but its proportion of reserve to liability is 63.40 per cent., against 63.39 per cent. last week. In the London open market discount is a little firmer at 1⅛ @1½ per cent., and call money remains at ½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending February 7, 1896:

	1896.	1895.
Dry goods	$[illegible]	$3,523,233
General merchandise	[illegible]	6,184,962
Totals for the week	$11,[illegible]	$9,708,195
Previously reported	[illegible]	50,435,330
Since January 1	$64,402,325	$60,143,525

The exports (exclusive of specie) from New York to foreign ports for the week ending February 11 were $369,124 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,127,242	$6,228,431
Previously reported	40,988,851	36,989,621
Since January 1	$49,116,093	$43,218,052

THE STOCK MARKETS.

The New York Stock Market.

Irregular strength has characterized the trading on the Stock Exchange for the past week. The outcome of the bond issue has stimulated public interest in the market and brought in a considerable volume of new buying orders. London, also, purchased our securities to a certain extent, the market there being affected by a renewed movement in the "Kaffir Circus," "Americans" being held in better esteem on account of the success of the bond issue and the decreased fear of silver legislation by Congress, as well as because of the prospect of an understanding between our own and the British governments in regard to the Venezuela question. The foreign buying was of a very marked character on Thursday, but was checked on Friday, largely because of the appearance of friction between the Boer government of the Transvaal republic and the British authorities. The rapid restoration of the Treasury gold reserve to almost normal proportions through payments for the new bonds also had a favorable effect on speculative sentiment, though the withdrawal of considerable amounts of gold from the Treasury, to be turned back to it immediately in payment for bond subscriptions, was naturally regarded as an anomalous feature—one, however, which could not be avoided under our present currency laws. The crushing vote against the Senate silver substitute for the bond bill in the House of Representatives was another incident of an encouraging character. On the other hand, professional interests have continued to realize their profits on blocks of shares purchased before the beginning of the present rise, and the traders have appeared anxious for a reaction, both to cover shorts and to attract fresh buying at a lower level of prices. Altogether, the market has been broader. The participation is of a much more general character, and a decidedly larger number of stocks have participated in its movement. The underlying tone has been bullish, though the realizing referred to above and the disposition of the traders to sell on rallies has created irregularity, though the appearance of buying, whether from our own public or London, has caused sharp and decided covering. On Friday the market had a reactionary tone, but was steady at the close.

The apparent change of position in regard to the American market in London is the most interesting incident of the week. As already indicated, this is based largely, if not wholly, upon a decrease of the feeling that has prevailed there that the United States would be forced upon a silver currency basis, whether by positive legislation or by the force of the conditions created by the existing system. The oversubscription for the bond issue seems to have indicated to Europe that capital in this country did not partake of such alarms, while the defeat of the silver measure by the House of Representatives was taken as a favorable sign. It cannot, however, be determined whether the British public has at last taken hold of Americans with confidence, and the interest which London manifests in them at present seems, in the absence of proof to the contrary, to be still of a professional character, though its continuance would, in the present state of feeling, soon extend to the entire speculative market.

The foreign purchases were responsible for the advance of St. Paul to 77⅝, and Louisville & Nashville to 51¼. The other granger stocks were also strong. Missouri Pacific seems to be still under bearish manipulation, and, after touching 25½, declined to 23. Denials by the management make no difference in the circulation of adverse rumors, which range from a receivership down to a scaling of interest charges. Manhattan was strong on the reports of deal for the lease of the company to the Metropolitan Traction.

The features of the industrial stocks were Chicago Gas and Sugar. The former was bought by inside interests, and advanced to 69¼ on the movement to bring the legal questions involved in the proposed reorganization promptly before the courts. Sugar was allowed to fall to 111¼, and was then advanced to 115 on manipulation by the pool. American Tobacco, after rising to 83¼ on the company's rather favorable yearly report, receded to 81.

Boston Stock Market.

[Special to BRADSTREET'S.]

Trade has averaged fair, with a firmer tone at the close. Railroads are generally quoted firmer, Atchison closing ½ point higher, with Chicago, Burlington & Quincy 2½ points higher and Mexican Central ¾ point advanced. Coppers are easier, Boston & Montana declining 1½ points, with Butte & Boston 4¼ points lower, with active sales. Sugar has been active, and the advance in price for the week has been 2 points. United States Leather closes ¾ point higher, with preferred 1 point advanced.

Prices of principal shares, with volume of transactions, have been as follows:

General Mention.

One of the questions of policy agreed upon in the reorganization of the Distilling & Cattle Feeding Company was that the new corporation should control the distribution of its own product through a subordinate distributing company. To that end the Spirits Distributing Company was organized under the laws of New Jersey, with a capital stock of $7,350,000, of which one-half is common stock, $2,100,000 first preferred cumulative 7 per cent. stock, and $1,575,000 second preferred non-cumulative 6 per cent. stock. All of the common stock and one share of the second preferred will be owned by the American Spirits Manufacturing Company, the successor to the Distilling & Cattle Feeding Company, thus giving it absolute control of the new corporation. The remainder of the securities are offered to the holders of the Manhattan Trust Company's certificates representing Distilling & Cattle Feeding Stock. They are given the option of subscribing at par to the first preferred stock of the Distributing Company to the extent of 6 per cent. of the face value of their holdings, and will receive in addition 50 per cent. of the amount of their subscription in second preferred stock. The details of this subscription are printed in another column, but it is important to note that after four installments of 15 per cent. each have been paid, certificates of first preferred stock, 60 per cent. paid, will be issued, together with certificates of fully paid second preferred stock. The entire subscription of $2,100,000 to the preferred stock has been underwritten by a syndicate in which, it is stated, nearly every prominent banking house in the street is represented. Two reasons were influential in causing the formation of the Spirits Distributing Company. One was that the American Spirits Manufacturing Company might control an economical distribution of its product, and another that both the company and its security-holders might obtain the profits that have accrued from the distributing business. It is believed that a large saving in expenses will be accomplished, and that it will reduce competition, since the new company has established harmonious relations with all important distilling distributing interests.

* Pittsburgh.

GENERAL TRADE FEATURES.

MODERATE GAINS IN DEMAND FOR STAPLE GOODS OF A SEASONABLE CHARACTER, IN A FEW LINES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, February 14.—Much to the surprise of financiers who had looked for a break in money rates this week, the market yet holds firm and rates high. Rates between banks have been as high as 10 per cent., which is believed to have been the highest rate ever obtained between banks at the Clearing House. Call money is nominally at 7@8 per cent., and 5 per cent. has been refused on nine months' time. The merchandise market continues slow, the condition of the money market being unfavorable to trade. Boots and shoes are being ordered more freely, however, and the market looks rather more encouraging for business. The purchase of hemlock sole leather has continued good, and values have advanced fully 1 cent from the price of first large purchases. Hides have taken a turn for the better and advanced ½ @¾ cent in price. Iron and steel are more quiet. Lumber is meeting with a quiet sale, but spruce holds quite firm. Coal is dull but steady.

Providence, February 14.—The condition of the woolen manufacturing industry of this section has not improved. Prices are low and orders light. The tendency is toward curtailment. The manufacturers of cotton machinery are having a good business, especially on southern orders from new cotton corporations.

Philadelphia, February 14.—Wool is not active, and yarn spinners find but a limited demand. Dry goods jobbers are buying carefully, and there is a disposition to keep stocks down to moderate proportions. Retailers find it dull, being between seasons, yet the general outlook is better, because wage earners are busy and in better financial condition than a year ago. In watch and jewelry lines the trade is regarded as being in very fair condition, the volume of business being in excess of a year ago. For all general household necessities there is a fair demand, but stocks are generally large. Coffee has a downward tendency, which is holding back buyers. Leather and morocco are dull and unsettled; the larger manufacturers are running one-half their full capacity. Some improvement is noted in boots and shoes, orders for spring delivery coming in from out-of-town buyers. Continued building operations have caused a fair demand for lumber, paints and glass. Iron is quiet, with an undercurrent of hopeful feeling, and indications point to a better market. Moderate weather makes a light demand for coal.

Pittsburgh, February 14.—Local trade generally continues to improve, and the volume of business is in excess of that in the corresponding time last year. Prices on all staple lines are well maintained. An especial good demand is noted for rubbers, and country merchants are reported buying quite liberally for spring and summer trade. Collections are somewhat improved. Money is reported in fair demand. Continued inactivity is noted in the iron market. Prices are quoted some little lower than last week, but few sales being reported at any price. Dealers generally do not look for a marked improvement for some time to come, but at the same time do not believe that prices will go much lower.

Buffalo, February 14.—Trade conditions here remain practically unchanged. Collections are slow and unsatisfactory.

Baltimore, February 14.—Leading houses report orders coming in satisfactorily from salesmen. Bills sold in the fall for four months are now about due, and collections have been very prompt. A general feeling of satisfaction is expressed by the trade for a good spring business.

West and Northwest.

Cleveland, February 14.—In leading lines the volume of business is fair, but for spring trade in other departments the weather conditions have not been favorable. Collections are classed as fair.

Detroit, February 14.—Manufacturers are fairly busy in all lines. Trade in general merchandise, however, continues dull. Collections show no improvement, being still slow and unsatisfactory.

Chicago, February 14.—There has been a moderate improvement in the jobbing trade this week despite the bad weather the past two days. There is a fair number of outside buyers noticed among the dry goods houses who make moderate purchases. The order business is also better. The weather is favorable for the sale of shoes and rubbers, and retailers have a good business. No change has occurred in the leather trade, but there have been enormous sales of hides, the aggregate here and at the Missouri river points for the week being 50,000 and 60,000 hides, and prices are up ¼c. to ½c. There have been some good orders placed for bar iron at full prices. Railroads are placing orders for rails more freely, and the bookings so far this year exceed last year's by a liberal amount. Billets and steel rods are $2 per ton higher, and the demand has improved. The works of the Illinois Steel Company here and at the outside points have resumed operations, and they are filled with orders for the next three months. Charcoal pig iron has sold more freely, and the market is firm. Poultry and eggs have advanced, with a better consumptive demand. Other produce is slow. Wool receipts, 44,058 pounds.

Louisville, February 14.—General trade continues along conservative lines, and practically no change is noticeable. Leaf tobacco sales are very large. Offerings are mostly of common quality, and prices in many cases are unsatisfactory.

St. Louis, February 14.—The influence of the bond sale has been quick to make its appearance, and there is a better tone prevalent in all lines, although conservatism marks transactions. Staples are moving in satisfactory volume. Buyers are here in fair numbers, especially from Texas, and the general feeling is that a betterment will shortly

be experienced. Manufacturers of boots and shoes continue active. Leather is in healthy demand at steady values, and hides are firm. Architectural and car foundries are using considerable pig iron, but the line in general is comparatively dull. Iron and steel are in fair demand at former values. Sheet iron and sheet steel are very low, with an improvement expected. Galvanized sheets are higher. Collections unsatisfactory.

Kansas City, February 14.—Dry goods, boot and shoe and hardware houses report better business this week and satisfactory collections. The live stock market is lifeless, with low prices. A majority of the merchants predict a prosperous year.

Milwaukee, February 14.—The trade situation remains materially the same as last week. Sales in staple lines are holding their own. Other lines are somewhat quiet. Collections are fair.

St. Paul, February 14.—In dry goods, hats, caps, men's furnishings, boots and shoes sales are well up to expectations. Hardware, paints and oils are fairly active. Collections are improving.

Duluth, February 14.—General trade seems up to expectations for this season. Jobbers in groceries report sales fair. In hardware and shoes trade is seasonable, with good indications for an early spring opening. This is noted also in building material lines, shown in advance orders and inquiries, influenced, no doubt, by the opening of the Indian reservation. Collections in farming communities are slow; in the mining regions steady. Flour trade is improving. The output last week was 58,000 barrels. The heavy lumber stocks are being slightly reduced by shipments, with large sales reported for the opening of navigation.

Omaha, February 14.—The recent snows, which were general throughout the state, have greatly improved the crop prospects. Trade shows improvement. Collections are fair.

Sioux Falls, February 14.—Jobbers report a fair seasonable trade, with tendency to small orders. Retail trade is quiet. Collections are fair.

Southern Cities.

Charleston, February 14.—General trade is fair in dry goods, boots and shoes. Groceries dull. Collections slow.

Savannah, February 14.—Trade for the week is fair. Good collections. Rosin and turpentine slower than preceding week. Both markets firm.

Atlanta, February 14.—Trade in all lines is good. Collections are satisfactory.

Augusta, February 14.—Grocery jobbers report business quiet. Shoe and dry goods merchants are receiving fair orders. Hardware and lumber trades are active.

Jacksonville, February 14.—Trade and collections for the week are fair.

Birmingham, February 14.—General business heads up to a fair average. Collections are ordinary.

Chattanooga, February 14.—Trade shows a gradual improvement. Collections in most lines are satisfactory.

Memphis, February 14.—General trade is unchanged and collections continue fair.

New Orleans, February 14.—Jobbers report a fair volume of business and better feeling. Cotton, sugar and rice are steady, without new features. Local securities are fairly active. City council passed free wharfage ordinance.

Galveston, February 14.—Jobbers report business slightly improved but not up to expectations for season. Collections are still complained of.

Pacific Coast.

San Francisco, February 14.—Commercial lines are slightly improved in volume. Produce is quiet, wheat rising again, but little is being done in spot transactions. Freight is nominally unchanged. The weather has been most beneficial, and grains and fruits promise well. Collections still slow.

Portland, February 14.—Seed stores note a marked increase in orders, and indications are favorable for a busy season with farmers. Retail trade is a little better than a week ago, but wholesale trade has not improved. Collections are fair.

Tacoma, February 14.—Grain is moving more slowly, millers having ceased buying after securing heavy stocks. Eastern lumber trade is quiet, with fair prospects within next sixty days. Local fishing industry is showing great improvement. Meat packers report business satisfactory. Country orders for general merchandise are light, but local demands steady.

Seattle, February 14.—Local business is quiet, but Alaska trade continues strong. Wheat is moving freely, over 82 carloads having been received this week.

Canada.

Toronto, February 14.—Business is quiet in wholesale circles this week. There is little change in prices of staples. Wheat is slightly weaker.

Montreal, February 14.—Trade reports all round are discouraging. Sales slow and collections more than usually behind. The large number of failures continues, and banks are more cautious in discounting than ever. The only encouraging feature is increased railway receipts. The outlook at the moment is cloudy still. Stocks are light and there is no inflation.

Halifax, February 14.—Business continues very quiet, and transactions in all lines are light. The sugar market remains firm, with prices unchanged. The price of bank and Labrador codfish has declined, owing to large imports from Newfoundland. Country roads are in capital condition and favorable to the lumbering interests. The ice blockade at St. Johns, N. F., has been raised, and the sealing fleet has sailed thence for their rendezvous.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

[Special to BRADSTREET'S.]

The market continues quiet, although seasonable fabrics are going off in a fair way. Cotton goods are dull at asking prices, and buyers are not disposed to operate until they know more nearly how the market is going to work. Manufacturers claim that asking prices are below the parity of the cost of cotton, and that goods must go higher if the raw material does not decline further. In the face of this, jobbers have been letting out supplies at cut prices, and it is reported that concessions have also been made at first hands on fine goods, in order to attract trade. On the other hand, raw cotton does not weaken much, and most manufacturers are holding for full prices. Printed fabrics are moving fairly, but business is largely confined to specialties. Ginghams are quiet. Dress woolens are jobbing well, particularly foreign goods in mohair effects and silk and wool. With mill agents trade is slow. Men's-wear woolens are quiet outside of overcoatings, which are steady.

Wool.

[Special to BRADSTREET'S.]

Trade has ruled more quiet, but general values are held steady. Buyers will buy wool and pay the price where they need it, but the wants of manufacturers are moderate. They are not securing the orders for woolens expected, and it looks as though more machinery would have to close down soon if orders do not increase. With light orders for goods, manufacturers will not buy wool ahead, and they only come into the market when the wool is needed. Australian wool is firm, and sells well compared with the general market. Recent purchases in London cost high compared with the market on this side, but old wools are yet offered at former prices. Territory wools are quiet, but combing grades are firm and sell much better than the shorter clothing grades. Fine fleece wools are quiet but hold steady in price, 100,000 pounds choice Pennsylvania washed delaine being taken at 22c. French scoured wools are moving well and compete sharply with territories. Carpet wools are quiet but steady.

MANUFACTURERS AT DINNER.

Hon. Warner Miller, vice-president of the National Association of Manufacturers of the United States for the State of New York, and a number of other gentlemen prominently identified with manufacturing interests in this state, entertained the executive committee of the association at a banquet in Delmonico's Monday night.

The hosts, besides Mr. Miller, were: Mayor Strong, Mayor Wurster, of Brooklyn; ex-Mayor Charles A. Schieren, of Brooklyn; William F. Cochran, Lowell M. Palmer, Henry C. Valentine, William H. Nichols, Seth M. Milliken, Albert Tilt, Henry B. Hagh, William Barbour, Rudolph Dolge, Col. A. G. Payne, Eberhard Faber, Alfred Dolge, Richard Butler and C. E. Locke.

The guests were Theodore C. Learch, of Philadelphia, president of the association; Robert Laidlaw, of Ohio, treasurer; E. P. Wilson, of Ohio, secretary: John H. Converse, vice-president for Pennsylvania; John B. Park, vice-president for Illinois; Elwyn W. Lovejoy, vice-president for Massachusetts; Thomas P. Egan, vice-president for Ohio; S. D. Kingsland, vice-president for Missouri; P. E. Studebacker, vice-president for Indiana; Frederick W. Swyer, vice-president for Wisconsin; Benjamin Utha, vice-president for New Jersey; John B. Howarth, vice-president for Michigan; Pliny Jewell, vice-president for Connecticut; Henry S. Story, vice-president for California, and Thomas Dolan, of Philadelphia, ex-president.

When Warner Miller addressed the company, "he spoke of the enormous interests confided to their care, calling attention to the fact that the membership of the association already embraces plants creating an annual output valued at more than a billion dollars. Probably nine people out of ten, he said, are under the impression that the extent and value of the agricultural products of the United States far exceed the manufactured products. Instead of this being true, the total value of manufactured products in 1890 was $9,370,107,624, whereas the total value of all agricultural products for that year was $3,800,000,000."

Continuing, Mr. Miller said in part: "Europe requires a large amount of our raw cotton, cereals and meat, but little of our manufactures. Great Britain, France and Germany are called the workshops of the world. They are engaged in a fierce contest for the continent of Africa and the islands of the sea; not that they may extend the blessings of civilization, but that they may hold the mo-

nopoly of their trade. The people of the United States have stood uninterested spectators of this hot scramble of European nations to possess themselves of the uncivilized portions of the globe, but the accumulation of wealth and power of production beyond our wants compel us to seek closer relations with the outside world. We have lying at our doors to the south and to the Orient in the Pacific a market which will take all we have to give it, if by wise statesmanship we cultivate such relations with these our neighbors as will give us their friendship."

Mayor Strong spoke in behalf of the manufacturers of New York city, and Mayor Wurster spoke for Brooklyn manufacturers.

PETROLEUM STATISTICS OF 1895.

The *Oil, Paint and Drug Reporter* says: "The year 1895 proved to be a memorable one in the history of the petroleum industry. It was demonstrated during the past twelve months that notwithstanding the production had been steadily decreasing in the older fields, and the general belief that these had been thoroughly exploited, given the proper stimulus, production would be increased and the old boundaries of productive territory greatly extended. This stimulus was given by the remarkable advance in the price of the product, which began during the latter part of March and culminated in April, when it soared to $2.69. The enormous increase in development work which resulted has already been detailed, and its effect upon the statistical situation is here considered. The average daily production in January was 77,755 barrels, in April it reached 85,469 barrels, and continued above 80,000 barrels during the remainder of the year, the highest being 88,100 barrels in September. The daily average for the year was 83,241 barrels, against 82,354 barrels in 1894. The shipments during 1895 showed a decrease of 4,379,310 barrels as compared with the year preceding, and the effect of this was shown in the stocks, which were reduced to 4,109,788 barrels at the close of June, the amount at the close of the year being 5,161,905 barrels.

"The production in the Pennsylvania field during each month of the past four years is shown in the following table:

	1892.	1893.	1894.	1895.
January	2,943,665	2,385,514	2,546,630	2,410,393
February	2,880,238	2,832,368	2,282,579	2,031,876
March	2,842,280	2,714,580	2,602,033	2,454,663
April	2,767,661	2,457,054	2,441,254	2,564,066
May	2,694,720	2,618,689	2,599,765	2,520,043
June	2,683,934	2,644,052	2,578,626	2,444,140
July	2,699,408	2,685,767	2,578,369	2,643,706
August	2,790,482	2,753,364	2,554,040	2,767,777
September	2,638,093	2,647,536	2,412,953	2,642,995
October	2,661,869	2,644,172	2,575,047	2,672,394
November	2,539,368	2,492,654	2,490,695	2,613,837

August	2,622,086	3,247,322	3,356,302	2,423,111
September	2,702,710	2,990,305	2,963,243	2,330,412
October	2,814,332	3,308,673	3,269,209	2,568,304
November	2,911,907	3,088,787	3,197,920	2,645,565
December	2,966,921	3,141,163	3,276,165	2,401,057
Totals	30,502,148	36,217,277	36,383,524	32,004,214
Averages	2,541,845	3,020,606	3,031,960	2,667,018

"The total net stock in possession of the pipe lines at the close of each month during the past four years is shown in the following table:

	1892.	1893.	1894.	1895.
January	15,902,468	16,858,440	11,563,575	5,640,185
February	16,451,731	16,637,078	11,209,540	4,908,776
March	16,766,383	16,517,696	10,973,486	4,780,541
April	17,249,534	16,378,256	10,550,533	4,545,784
May	17,681,880	16,032,659	10,316,188	4,319,050
June	18,276,895	15,571,075	10,042,072	4,109,788
July	18,694,062	14,928,679	9,727,531	4,166,656
August	18,816,683	14,499,090	9,090,267	4,287,355
September	18,844,957	13,911,818	8,558,096	4,636,565
October	18,080,523	13,246,343	7,880,863	4,763,601
November	17,730,444	12,604,918	7,106,728	4,756,671
December	17,395,389	12,111,183	6,336,777	5,161,905

"The statistical position of Ohio oil was influenced by similar conditions, while its use was stimulated by the action of the Produce Exchange of this city in making refined from Lima crude a good delivery on sales under regular contract when it comes up to such contract requirements. The highest production was reached in October, with 1,822,002 barrels. The average monthly production exceeded that of 1894 by nearly 200,000 barrels. The deliveries during the year show an increase of 2,386,605 barrels. The stock increased during the year to 21,683,823 barrels at the close of November, but at the close of the year was reduced to 21,474,848 barrels.

"The runs from the wells during the last four years were: 1892, 13,874,288 barrels; 1893, 14,451,195 barrels; 1894, 16,047,064 barrels; 1895, 18,415,631 barrels. The shipments show a steady increase during the past year. Comparisons are as follows: 1892, 16,631,738 barrels; 1893, 14,669,640 barrels; 1894, 14,443,761 barrels; 1895, 16,830,366 barrels. The total net stocks at the close of December during the past four years were as follows: 1892, 18,604,442 barrels; 1893, 18,497,340 barrels; 1894, 20,158,266 barrels; 1895, 21,474,848 barrels.

"The exports of the various products during each of the past three years and the total exports for each year is given in the following table:

	1893.	1894.	1895.
Crude	114,609,343	114,468,611	115,954,128
Refined	705,674,977	726,726,687	677,500,647
Naphtha	16,249,389	14,831,967	12,757,940
Lubricating	34,762,754	38,975,128	46,769,565
Residuum	460,614	59,766	143,850
Total gallons	871,757,017	894,862,159	853,126,130

THE FALL IN PRICES.

The Philadelphia *Press* says editorially: "In discussing the subject of students' board at Harvard University in his latest annual report, President Eliot gives some interesting facts as to the fall in the price of provisions in twenty years. The records of the Harvard Dining Hall Association show that prices in 1874 and in 1894 compare as follows:

	November	
	1874.	1894.
Beef (rump and loin)	$0.14	$0.12½
Mutton (loin and legs)	.08	.09
Lamb	.09	.08
Turkeys	.20	.14
Chickens	..	.14
Halibut	.13½	.16
Cod	.05½	.06
Haddock	.05½	.06
Oysters	1.45	1.00
Potatoes	.75	.64
Flour	7.75	3.75
Sugar	.11	.04½
Butter	.41	.27
Eggs	.33	.24
Coffee	.37	.31
Tea	.75	.50
Milk (8½ quarts)	.45	.37

"The only articles of provision on this list that have risen in price are mutton and fish, which show only a small increase per pound. Every other article has decreased in price, the fall in such articles of prime necessity as beef, flour, sugar, potatoes and butter being marked. The total cost of the sixteen articles in the first column is $13.13½, and the cost of the same articles in the second column is $7.84. Chicken is not mentioned in the first column and is omitted from the total of the second column. According to these figures the cost of boarding a student by the Harvard Dining Hall Association in 1894 is little more than half what it was in 1874.

"But this fall in the prices of provisions has not been operative in Cambridge, Mass., alone. It has been general, and to the advantage of the workingman as much as to the student. And yet during the same twenty years there was a general rise in wages the country over. The workingman was getting a larger return for his labor, and was able to buy his provisions for nearly half what it had previously cost him. And it should be remembered that in all these years the policy of protection was in force. It was ended with the year President Eliot takes as his second basis of comparison."

COST OF THE NICARAGUA CANAL.

The Philadelphia *Press* says: "The estimated cost of the Nicaragua Canal is increased by the government commission whose report has just appeared. The cost, however, in spite of this increase, remains within the bounds of the capital which can be raised and the aid which can be legitimately extended by the United States.

"The original estimate of the Nicaragua Canal Company, ten years ago, was $66,466,880. The present estimate by the government commission is $133,472,893. This is just double. In the interval, however, the estimates made by the company have been increasing as the difficulties were better known. Mr. A. G. Mencoal's early estimate was $65,084,176. When his figures were revised by Mr. John Bogert and his associates the total cost was raised a little later to $87,799,570. Of late the estimates usually made have placed the cost at from $100,000,000 to $110,000,000.

"The report of the government commission, instead of doubling this latter estimate, as was freely predicted, advances it only to a round $133,500,000. As this commission was selected in no friendly spirit and their instructions were evidently intended to render it certain that their estimates included every possible item of cost, the figures which they have now published may be accepted as final. The total outlay needed to connect the oceans may be unhesitatingly placed at between $130,000,000 and $150,000,000. The cost is not likely to be less than the first of these figures, and it is not likely to be greater than the second sum.

"As canals go this is not an extravagant sum. The Suez Canal is 92 miles, dug in sand, without rock and with no difficulties, and cost $102,750,000. It has paid dividends from the start. The Manchester Canal has cost in all $75,000,000, and is built by one city. The Erie Canal, 381 miles, cost $52,000,000, raised by one state. These are the only canals comparable in cost. The Caledonian Canal, 60 miles, cost $5,000,000 in 1823; the North Holland, 52 miles long, $5,000,000 in 1825; the Amsterdam Canal, 15½ miles long, $15,000,000 in 1876; the St. Petersburg Canal, 18 miles long, $9,000,000 in 1886; the Welland Canal, 27 miles long, $10,000,000; the St. Mary's Canal, 1 mile, about $7,500,000, and the Corinth Canal, 4 miles, about $12,000,000.

"The Nicaragua Canal will be 170 miles, and it will be wider and deeper than any of these canals. Under these circumstances a cost of $135,500,000 can be considered neither excessive nor unexpected. If single cities and local corporations can build the canals noted above, the United States, with the resources of a continent, is certainly justified in pushing to completion at this estimated cost a canal which will join the trade of two oceans.

"In considering this estimate of cost it must not be forgotten that it is based on a minimum width of 80 feet. The Suez Canal had one of 72 feet, Corinth Canal of 75 feet, the Panama Canal, in the Culebra cut, 78½ feet, and the St. Mary lock is 80 feet. In addition the Nicaragua plans call for a berm of 5 feet on each side, and it can there be extended to 90 feet wide in the only parts which will be limited to 80 feet, or 13.1 miles out of 169.5 miles.

"The estimates now made show, in other words, that the longest, deepest and broadest ship canal yet proposed can be built for a sum commensurate with that expended on paying canals. Of its difficulties there is no doubt. Instead of being a cut from sea to sea, the Nicaragua Canal uses a fresh water lake, and in caring for its outlet tropical rain floods of some twenty-five feet annually must be secured by dams seventy-five feet high. The region is volcanic, and almost every conceivable engineering difficulty is to be encountered. If, however, the cost is $150,000,000 there can be no question as to paying a fair return on the investment. The known traffic ready to use the canal is about 8,000,000 tons, and judging from other canals ten or fifteen years would see this double. A charge of $2.50 a ton would be light, and half this would be ample to return 3 per cent."

DECREASED TAKINGS OF OUR BREADSTUFFS.

The Minneapolis *Northwestern Miller* says: "The report of the Bureau of Statistics for the eleven months ended November 30, showing the destinations of breadstuffs exports from this country, should afford plenty of food for thought among millers, especially with relation to the proposed reciprocity legislation. These figures show that for the eleven months under consideration we lost about 1,700,000 barrels from our exports of flour, as contrasted with the same time in 1894. In value, this represented a direct loss of $9,400,000 to the millers of the United States. To show where our losses and gains came in, we have compiled the following table from the statistics of the bureau:

	Barrels.	
To	Loss	Gain.
United Kingdom	1,241,198	....
Germany	53,658	....
France	2,275	....
Other Europe	571,357	....
British North America	....	431,818
Mexico	6,254	....
Central American states and Br. Honduras	....	11,105
Cuba	271,798	....
Puerto Rico	42,766	....
Santo Domingo	2,687	....
Other West Indies and Bermuda	....	40,018
Brazil	135,700	....
Colombia	24,700	....
Other South America	19,257	....
China	....	10,205
British India and East Indies	....	912
Other Asia and Oceanica	....	197,293
Africa	4,269	....
Other countries	....	19
Totals	2,375,919	691,370

These figures indicate that we have lost heavily in Great Britain, Germany and Europe generally, in Cuba (over 50 per cent.), Puerto Rico, Brazil and other South American countries. We have gained in British North America and, moderately, in portions of the West Indies and in Asia and Oceanica. The disparity between our gains and our losses is very heavy, on the wrong side, and the figures demonstrate, better than any other argument can, that some vigorous steps must be taken to aid our flour makers. It is no great wonder that millers complain of hard times and small profits when their selling territory is contracted, in the short space of eleven months, by the enormous figures of 1,700,000 barrels of flour, representing $9,400,000 in value. Discriminating foreign tariffs, against which the American miller is absolutely without protection, are contributing more and more to this destructive work. There is no remedy for it except through retaliatory legislation. We again call the attention of readers of this paper to the Kerr reciprocity bill, No. 3212, now before the Ways and Means Committee of the House, and urge them, for their own good, to demand vigorously of their congressmen that they support this measure."

INDIA RUBBER STATISTICS FOR 1895.

"According to the statistical sheets compiled by Messrs. Earle Brothers, New York," says the *India Rubber World*, "the output of India rubber from Pará during the calendar year 1895 was 13.4 per cent. greater than in 1894, and 10.2 per cent. in excess of the shipments from Pará in 1893, which year until now has held the record. The growth of the Amazon rubber industry may be illustrated by comparing the exports from Pará at intervals of five years as follows:

Years.	Pounds.	Years.	Pounds.
1865	8,243,000	1885	29,310,000
1870	10,528,000	1890	36,300,000
1875	15,141,000	1893	42,068,000
1880	18,889,000	1895	46,363,000

"The increase has been fivefold in thirty years, and the amount has doubled in twelve years. The imports of Pará rubber into the United States have increased in about the same ratio, but in 1895, for the first time, the takings from Pará in this country have been exceeded by Europe. While full details are not yet to hand, it is known that the total of India rubber imports of Great Britain, France and Germany were larger in 1895 than in any former year, and a part of the excess in the case of each country undoubtedly consists of Pará grades. The production of African rubbers is also gaining ground, as well as their consumption in America, while the returns of Central America and East India sorts may be said to show little change.

"The consumption of India rubber by the United States and Canada by different years is indicated by this comparative table, the figures expressing pounds:

Details.	1893.	1894.	1895.
Imports to United States	36,780,000	32,797,000	36,250,000
Exports to Europe	1,600,000	875,000	725,000
Totals	35,180,000	31,922,000	35,525,000
Add stock January 1	2,725,000	2,322,000	3,182,000
Totals	37,905,000	34,244,000	38,707,000
Less stock December 31	2,322,000	3,182,000	1,251,000
Deliveries to manufact'rs	35,583,000	31,062,000	37,456,000

"In the table which follows is an estimate of the amount of visible supplies of India rubber in the world on December 31, 1895, which were smaller than at the same date in any year since 1882:

		Pounds.
Stocks in the United States		1,251,000
Para grades	601,000	
Central American and Caucho	200,000	
African and East Indian	450,000	
Stocks in Europe		3,472,000
Para grades	1,164,000	
All other	2,308,000	
Stocks of Para at Para and afloat		5,385,000
Total		10,108,000

[This excludes stocks afloat of all other than Para sorts.]

"The highest price recorded for fine Pará in 1895 is 81½ cents in November. So high a price had not previously been quoted since 1891, in April of which year there were quotations of 95 cents.

"The English rubber movement for the calendar year 1895 is of interest also for the reason that it breaks the record in that country. While the imports exceed those of the United States, the consumption there is less than half that recorded in the latter. The details for three years follow, the figures indicating pounds:

	1893.	1894.	1895.
Imports	32,857,776	33,874,512	38,212,816
Exports	16,710,736	19,176,304	22,678,320
Net imports	15,534,496	14,698,208	16,147,040

"Great Britain being the principal handler and consumer of gutta-percha, the movement of this material in a crude form in that country also deserves mention in this connection. Here are comparative figures for the same three years as above:

	1893.	1894.	1895.
Imports	4,534,880	5,246,752	5,387,088
Exports	832,160	893,200	1,404,032
Net imports	3,702,720	4,353,552	3,983,056

"It will be seen that the combined English imports of crude India rubber and gutta-percha last year reached a total of 43,599,924. The figures above given for the United States include gutta-percha, but do not include the gum known as pontianak, which is included in the government statistics of rubber importations kept at Washington, thus giving larger totals than the records kept by brokers and importers."

Distilling and Cattle Feeding Company

REORGANIZATION.

To holders of Certificates of the Manhattan Trust Company issued under the plan of reorganization of the Distilling and Cattle Feeding Company:

During the progress of the reorganization it has been suggested to the Reorganization Committee by parties in interest that the new corporation should be placed in position to control the distribution of its own product through a distributing company.

The committee has expressed the opinion that a full opportunity to participate in the stock of such distributing company should be offered to the holders of the certificates of the MANHATTAN TRUST COMPANY, issued under the plan of reorganization. This view having been concurred in by the parties who have organized the distributing company, your attention is called to the following announcement.

RICHARD B. HARTSHORNE,
JOHN I. WATERBURY,
FREDERICK M. LOCKWOOD,
JULES S. BACHE,
WILLIAM E. HUTTON,
Committee.

NATHAN BIJUR, New York,
JOHN L. CADWALADER, New York,
MORAN, KRAUS & MAYER, Chicago,
Counsel.

NEW YORK, February 12th, 1896.

OFFICE OF

AMERICAN SPIRITS MANUFACTURING COMPANY,

Mills Building.

NEW YORK, February 12th, 1896.

To holders of Certificates of the Manhattan Trust Company issued under the plan of reorganization of the Distilling and Cattle Feeding Company:

One of the first steps following the organization of the AMERICAN SPIRITS MANUFACTURING COMPANY has been to bring about the formation of a distributing company capable of handling, if necessary, its entire product.

Such corporation, known as the SPIRITS DISTRIBUTING COMPANY, has been organized under the laws of the State of New Jersey with a capital stock as follows:

First Preferred Cumulative 7 per cent. stock	$2,100,000
Second Preferred Non-cumulative 6 per cent. stock	1,575,000
Common stock	3,675,000
Total	$7,350,000

The entire issue of common stock and one share of the second preferred will be owned by the AMERICAN SPIRITS MANUFACTURING COMPANY.

Holders of MANHATTAN TRUST COMPANY'S D. & C. F. Co. certificates are offered the option to subscribe at par for the first preferred stock of the Distributing Company to the extent of six per cent. of the par value of their holdings or any part of such holdings; receiving in addition fifty per cent. of the amount of their subscription in second preferred stock.

For the convenience of certificate holders the Manhattan Trust Company has consented to act as depositary, and to ascertain such holders the transfer books of certificates for Distilling and Cattle Feeding Company's stock will close Monday, February 24th, 1896, at 3 P. M., and open Wednesday, February 26th, 1896, at 10 A. M.

Blank forms of subscription can be obtained upon application to the MANHATTAN TRUST COMPANY, Wall st., corner of Nassau, New York. *Subscriptions must be delivered at the office of the Manhattan Trust Company not later than 12 M. on Saturday, March 7th, 1896, together with check for the first installment of 15 per cent.*

Second installment, 15 per cent., payable on March 21st, 1896.

Third and fourth installments of 15 per cent. each, payable respectively as called, on notice by mail of not less than 15 days to the registered holders of the subscription receipts and at intervals of not less than 15 days.

It is not at present intended to call the remaining four installments of 10 per cent. each. That amount is designed to provide for the possible extension of the business of the Distributing Company into territory other than that now contemplated, or for future requirements.

Temporary receipts will be issued by the Manhattan Trust Company, upon which will be endorsed payment of each installment.

Upon payment of the fourth installment of 15 per cent. and surrender of the temporary receipt, subscribers will receive the certificates of first preferred stock 60 per cent. paid together with the second preferred stock to which they will be entitled.

The privilege now offered to holders of Manhattan Trust Company's D. & C. F. Co. Certificates, has been underwritten by a syndicate.

Application to list the stock of the Distributing Company on the New York Stock Exchange will be made immediately.

In consequence of the formation of the SPIRITS DISTRIBUTING COMPANY, THE AMERICAN

FINANCIAL.

SPIRITS MANUFACTURING COMPANY has been enabled to make advantageous arrangements for the distribution of its product in the territory east of Buffalo and Pittsburg at a cost of distribution far below any hitherto paid. The AMERICAN SPIRITS MANUFACTURING COMPANY will control the distribution of its product west of Buffalo and Pittsburg, through the ownership of a majority of the stock of the Spirits Distributing Company.

Under its contract with the Manufacturing Company, the Distributing Company will take the product of the Shufeldt Distillery at Chicago and the St. Paul Distillery at St. Paul; and, if required, will also take the product of ten thousand additional bushels daily for distribution in the East. This product is taken by the Distributing Company at market price, and is paid for in cash, the Distributing Company agreeing to employ in its business a minimum of $1,000,000 cash. The Manufacturing Company leases to the Distributing Company for the term of 999 years the H. H. Shufeldt & Co. Distributing Plant with all its appurtenances and machinery, and will, pursuant to a written contract, make a fixed annual payment to the Distributing Company of $120,000, payable quarterly, beginning May, 1896. In the event of the Distributing Company extending its business as above provided, and calling up the remaining installments of 10 per cent. each on the First Preferred Stock, the Manufacturing Company will, as provided in such contract, make a further annual payment of $20,000 for each additional installment of 10 per cent. paid in, the total annual payment being limited to $200,000. The amount thus to be received annually by the SPIRITS DISTRIBUTING COMPANY will be sufficient for the dividend of 7 per cent. upon the installments paid in on its First Preferred Stock.

THE AMERICAN SPIRITS MANUFACTURING COMPANY, under the arrangement described above, controls an independent and powerful distributing agent to handle its product without the expense heretofore paid for the service, and practically without cost, as the estimated earnings of the Distributing Company from its general business, in addition to the fixed annual payment from the Manufacturing Company above referred to, warrant the belief that they will be sufficient to pay dividends upon the Common Stock held by the Manufacturing Company.

The opportunity to participate in the profits of the distributing business is now offered to the stockholders of the American Spirits Manufacturing Company.

American Spirits Manufacturing Company.
By S. M. RICE, President.

By order of the Board of Directors.

INVESTMENTS.

REPUBLIC SAVINGS AND LOAN ASSOCIATION,

207 BROADWAY, COR. FULTON STREET, NEW YORK.

	Jan. 1, 1894.	Jan. 1, 1895.	Jan. 1, 1896.
Assets	$21,161.29	$71,909.17	$157,925.30
Loans	15,005.00	65,881.00	148,940.75
Shares in force	3,687½	20,606	34,966

The rate of earnings made by the Association for the past two years, if maintained, will mature all stock within the estimated time.

The Association will issue a limited amount of its 8 per cent. Income Stock at $50 a share, in order to meet the demand for loans on improved city rentable property.

SOLICITORS OF ABILITY AND CHARACTER WANTED.

INCOME SHARES

CLASS "C" COUPON SHARES are sold at $85. per share, together with a purchase premium of $5. They pay a fixed preferred dividend of 6% per annum on the par value of $100. per share or 6⅔% per annum on the money invested.

Dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any bank.

CLASS "D" COUPON SHARES are sold at par, $100., together with a purchase premium of $10. Fixed dividend of 8% on par value or 7 27/100% on money invested. Coupons payable January 1st. Collectable through any bank.

Withdrawable after sixty days' notice, together with dividend accrued thereon.

The desirability of these shares, from which to derive a cash income, is unquestionable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 22, 1896.

Once again the information comes from Washington that there is a possibility of bankruptcy legislation in the near future. It is announced in dispatches that the sub-committee of the House Judiciary Committee having charge of the subject of bankruptcy has about agreed to a measure on the subject. A number of bills regarding bankruptcy have been introduced in the House and referred to the sub-committee, which, in taking up the subject, decided to consider both voluntary and involuntary bankruptcy. After a careful consideration of the various measures the sub-committee has, it is said, practically agreed to report a bill on the lines of the Torrey bill, which provides for both voluntary and involuntary bankruptcy, defines who may become bankrupts, the duties of bankrupts, the protection of bankrupts, and their extradition. There will be a minority report in favor of a measure providing for voluntary bankruptcy only, but there is little doubt as to what the action of the full committee upon the question will be. About the merits of the Torrey bill nothing seems necessary to be said in these columns, in which, as our readers know, much space has been devoted to explanation and advocacy of the measure. Congress has an opportunity to do something for its record among business men by enacting this long-considered and very necessary piece of legislation, and it will have the less reason for a failure to do this because the measure has no political bearings.

While no further correspondence relative to the Venezuelan question has been given to the public, the expressions of official opinion in the United Kingdom on the occasion of the opening of Parliament, and the tenor of discussion in the press, would seem to indicate the existence of a growing belief that the controversy is nearing an amicable settlement through the process of arbitration. Such differences as are reflected in the public discussions of the question in Great Britain seem, upon a broad view of the question, to be concerned mainly with points of detail, which would seem of a nature to lend themselves to accommodation. There has been considerable unofficial talk about a suggested joint commission to determine the controversy, but while it may be that this suggestion would meet the views of the governments concerned, nothing of a definite or official character has been made public, so that the question to what extent the idea really represents the views of the diplomats on both sides must for the present remain a matter of conjecture.

Naturally opinion in the United States continues to be in favor of the arbitration of the Venezuelan question, the only change having been in the direction of a proposal for the establishment of a permanent system of arbitration for disputes between the two countries. At a notable gathering of leading citizens in New York this week resolutions were adopted reciting that the United States and Great Britain, nations which are akin in language and jurisprudence, are already accustomed to arbitrate their disagreements, and have emphatically declared themselves in favor of such arbitration—Congress, by the action of both Houses in 1892, and the House of Commons, by its vote in 1893—and that there is an earnest desire for such action by the national legislature and the executive as shall make permanent provision for some wise method of arbitration between the two countries, in the hope that such a step will finally lead to international arbitration throughout the civilized world. The gathering then resolved that measures be taken in the interest of such arbitration, and in concert with like committees from other cities, for the convening in the city of Washington, at the earliest practicable date, of a conference of citizens representing every portion of the country, without distinction of party or creed, with a view to giving practical form to the sentiments expressed. Similar expressions of opinion have been had and are to be made in other cities throughout the country, and an important meeting may be looked for at Washington.

Under ordinary circumstances, of course, there can be no question as to the propriety in the public interest of requests of the national legislature for copies of reports and similar public documents, but there arise occasions when compliance with such requests constitute a scarcely reasonable strain upon the resources of the executive. Of late the number of these demands for information have grown apace, and the executive has taken occasion to call the attention of Congress to the difficulty of always meeting them. A request was lately sent by the Senate for a copy of the report and accompanying documents of a special agent of the United States to the Fiji Islands to investigate the claims of certain American citizens for lands alleged to have been owned by them and appropriated by the British government. The President transmitted to the Senate the report, which is said to have no particular public interest, together with a statement by Secretary Olney to the effect that to comply with the Senate resolution, so far as it relates to accompanying documents, would involve the copying of 1,117 foolscap pages of written matter and 163 pages of printed matter. In addition, the documents called for comprise 44 maps and four British blue books (852 pages folio in all), two of which at least cannot be supplied by the department, nor probably obtained by purchase. It is probable that Congress, after these representations from a department which has been much overworked of late, will, to some extent, modify its often sweeping requests for information.

Legislation dealing with the question of prison labor is again attracting attention in New York state. A commission which has been considering the subject has prepared a bill that has been reported favorably by a committee of the Senate, and similar action is expected by an Assembly committee. The bill provides that neither the superintendent of state prisons, nor any other authority whatsoever, shall make any contract by which the labor or time of any prisoner in any state prison, reformatory, penitentiary or jail in the state, or the product or profit of his work, shall be contracted, let, farmed out, given or sold to any person, firm, association or corporation, except that the convicts in said penal institution may work for, and the products of their labor may be disposed of, to the state, or any political division thereof, or for or to any public institution. Prisoners are to be employed at hard labor not to exceed eight hours each day, excepting Sundays and holidays, but such labor must be either for the production of supplies for the penal institutions themselves or for public institutions owned or managed by the state or any political division thereof.

At a meeting held this week the New York Board of Trade and Transportation directed attention to the condition of the coastwise canals, and adopted resolutions declaring that the abolition of the tolls now charged on the small canals between Long Island sound and Chesapeake bay, aggregating about $1.50 per ton, would, it is believed, effect an economy of not less than $20,000,000 per annum on the prospective traffic and greatly stimulate the dependent industries, and insisting the transportation, commercial, manufacturing, agricultural, economic, and strategic interests of the United States all demand the immediate purchase and enlargement of the existing coastwise canals to such dimensions as will provide a safe and rapid passage for our cruisers to and from naval rendezvous at League Island, as well as for the coasters engaged in interstate commerce on the seaboard. The Board of Trade therefore requested Congress to adopt such measures as shall secure the early emancipation of the Chesapeake and Delaware, Chesapeake and Albemarle, and Delaware and Raritan canals from tolls, and the enlargement of these canals and their approaches to a suitable size for coastwise commerce.

A Chicago dispatch announces that, as the result of an investigation quietly conducted by the Western Railway Weighing Association, the federal grand jury in Milwaukee has found indictments for violations of the Interstate Commerce law against a Wisconsin grain and malt firm. The case is to be made a test case. The main charge in the indictment alleges the furnishing of false weights to the association. It appears that, by the rules of the association, shippers who have entered into contracts with the body are enabled to make shipments that pass over several lines without having the cars weighed in transit, thereby saving time and money in the side-tracking and weighing at the different junction points. The company is supposed to furnish actual weights, but the association found a short time ago that many shippers were taking advantage of the arrangement by furnishing false weights, and so robbing the railroads of thousands of dollars. When the invoice books of suspected firms were examined the weights found there tallied to those furnished the railroads, but on weighing the cars the association found there was a big discrepancy. It was then found that shippers had prepared false invoice books for the benefit of the association.

France has this week been passing through another political crisis, which arose out of a conflict between the Senate and the Chamber of Deputies. The Senate has twice passed votes of want of confidence in the existing ministry, owing to the attitude of the Minister of Justice towards the Southern Railway scandals. The ministry, however, has had, and continues to have, the support of the Chamber of Deputies, and it has, therefore, bidden defiance to the Senate. The question at issue, from a constitutional point of view, involves the point whether the Senate and the Chamber of Deputies are of equivalent power as regards their relation to the tenure of ministries, or whether, as in the past, the Chamber of Deputies will continue to be the predominant body in the legislature.

RAPID PAYMENTS FOR THE NEW BONDS.

Not the least gratifying feature connected with the new issue of government bonds is the rapidity with which the successful bidders have paid the gold due on their allotments into the Treasury. Anticipation of the payments was expected in some cases, but it was scarcely believed that over three-quarters of the whole amount of gold would be turned into the Treasury before the time for the second installment under Secretary Carlisle's supplementary circular had arrived. In this respect, indeed, the actual results have surprised the Treasury officials. Moreover, the detail work involved in the receipt and count of such large amounts of specie has found the Treasury somewhat unprepared, and owing to the tax on its facilities there has been some delay, as well as an uncertainty about the amount actually turned in and the condition of the Treasury gold reserves. Before the end of the present week it is, however, known that only some $30,000,000 of gold due upon the bond subscriptions remains unpaid, and that the Treasury gold reserve now stands at about $104,000,000.

It should, however, be noted that about $20,000,000 of this amount consists of deposits on account of the bond sale with the special depository banks in New York, which amount is partly in gold and partly in legal tenders, the latter having been received in exchange for gold that was covered into the Treasury as fast as it was received from successful bidders for the bonds. According to the Treasury official statements, which, as before noted, do not include the special deposits, and which are somewhat behindhand, the total free gold held by it on Friday was about $104,000,000, of which about $65,000,000 has been received for account of the bond sale.

Gold withdrawals have, of course, continued for the purpose of paying bond subscriptions. The loss to the Treasury for this purpose has, however, been comparatively small. It is indeed suggested that in many cases the gain to the Treasury in gold is a temporary one. Successful bidders, it is claimed, have borrowed gold from banks, and will later on withdraw it on legal tenders from the Treasury for the purpose of repaying these loans. Some of the withdrawals this week are attributed to such operations. In spite of this, Treasury officials are of the opinion that in any event not more than one-third of the amount of gold still due on the subscriptions will be taken from the Treasury.

The fact that the money market has been comparatively unaffected by the enormous payments for bonds by the successful subscribers is a noteworthy fact in the situation. It has, indeed, excited no little comment, in view of the general idea which prevailed up to February 5 that the payments would inevitably create stringency and develop a high and unsettled money market. These apprehensions have, however, proved to be altogether unfounded, and the transfers from the banks to the Treasury have been unaccompanied by a ripple of excitement in the money market.

Nor have foreign banking interests made an immediate raid upon the restored Treasury gold reserves for shipment to Europe. The exchange market has been since February 5 below the specie shipping point, this condition being due to the increased foreign purchasing of our securities. Wall street attributes the latter to the feeling of renewed confidence in regard to "Americans" in the foreign markets, created by the success of the bond issue itself and the defeat of the free silver measure in the House of Representatives.

An incident of the week in connection with the bond issue was the default of certain subscribers to whom about $4,200,000 of the new bonds had been allotted to make payment of the first installment thereon. Nearly the entire amount was the result of a bid by a New York speculator at a little over 115. Owing rather to the form of his application, which coupled his own name with the words "and associates," he was unable to dispose of his allotment or to obtain assistance in taking up the bonds. The defaulted allotments were declared forfeited and the amounts allotted to the Morgan syndicate under their bid for any part of the issue, though this action has not passed unchallenged by other parties, who, it is declared, would have taken the amount of the defaulted subscriptions at an advance over the syndicate price.

GROSS AND NET RAILROAD EARNINGS IN 1895.

It is almost superfluous at this date to recall the fact that the year 1895 was a favorable one to the transportation interests of this country. Reports to BRADSTREET'S, month by month, from almost the beginning of 1895, pointed unmistakably to a distinct growth of favorable features overshadowing or putting in the background conditions of less favorable import. Earnings reports to BRADSTREET'S for the year 1895 witnessed a great change come over the railroad operating interests as the year progressed from the rather doubtful, not to say blue outlook with which the year began. The short crops of all cereals in the year 1894 gave little promise of a favorable carrying trade for the railroads in the first half of 1895, and this promise was only too well borne out by the results. The receipts of wheat, corn, oats and other grains were smaller at nearly all markets than they were in the preceding year, while a corresponding falling off in the movement of hogs and live stock, results particularly of the short crop yields, may be pointed to as bearish features dominating the railroad outlook early in the year 1895. The situation as regards rates was also far from favorable, and this feature which in a year of large traffic would be a sufficiently disturbing condition, only increased the number of adverse conditions with which railroad managers were forced to cope. As the year advanced, however, the remarkable improvement in general business which first manifested itself in the spring of the year began to exercise its natural effect upon the receipts of railway companies, while the activity in manufacturing in the eastern and middle states materially enlarged the receipts of the roads traversing those sections. As the year progressed and the influence of improved trade conditions began to exercise its natural effects the number of other favorable features increased as if by magic. The spring wheat harvest turned out an unexpectedly large yield and the movement of live stock to market also showed a notable increase. Other large crop yields, too, began to exercise their effect, while the agitation of the rate situation was productive of considerable good. The almost total absence of any very large strikes during the year furnished a special contrast to the year preceding. It is true that there were some unfavorable features developed toward the

* Eleven months in all years. † Included in total of system under which it appears. ‡ Year ending November 30.
§ Deficit. ¶ Includes Colorado Midland in 1893.

close of the year, notably the short yield of cotton and the delayed movement of corn to market, but in the former case the effect exerted appeared to be confined to a certain section in the southwest, and the movement of corn when it did begin nearly made up for the falling off in cotton tonnage. The result was that the year 1895, which in railroad matters as in nearly all other lines of trade made a poor beginning, certainly achieved a good ending.

Reports to BRADSTREET'S from 135 railroad companies, embracing nearly 80 per cent. of the total gross earning capacity of the country, show total aggregate earnings of $904,870,155, an increase over the year 1894 of 6.3 per cent., while net earnings aggregate $284,703,053, an increase of 9.6 per cent., showing that net earnings were proportionately better than those of gross, and pointing to the effective economies made necessary by the depression of the preceding year. A special feature of the present report of earnings is the inclusion of the earnings of nearly all the prominent companies for three years past, thus allowing comparison to be made with 1893, the year of the World's Fair and of the panic. Compared with 1893, when the gross earnings of the roads aggregated $957,414,073, and the net earnings over $296,080,322, however, the earnings of the identical companies for the year 1895 showed a falling off of 5.5 per cent. in gross and 3.2 per cent. in net, pointing to the fact that some progress is still necessary before the railroads of the country will be in as favorable a position as they were previous to the panic. The following tables show the percentages of gain or loss in gross and net earnings by groups of roads for three years past:

GROSS EARNINGS.

	1895 *compared with* 1894.	1895 *compared with* 1893.	1894 *compared with* 1893.
Grangers	Inc. 6.6	Dec. 8.7	Dec. 14.4

Mexican	Inc. 12.7	Inc. 18.8	Inc. 5.5
Totals	Inc. 6.3	Dec. 5.5	Dec. 11.1

NET EARNINGS.

	1895 *compared with* 1894.	1895 *compared with* 1893.	1894 *compared with* 1893.
Grangers	Inc. 17.5	Inc. 3.0	Dec. 12.3
Central western	Inc. 23.8	Inc. 2.6	Dec. 17.0
Trunk	Inc. 8.4	Dec. 2.1	Dec. 9.7
Eastern and middle	Inc. 1.6	Inc. 8.7	Inc. 6.9
Coal	Inc. 7.6	Dec. 10.7	Dec. 17.0
Southern	Dec. 2.2	Dec. 2.1	Inc. .1
Southwestern	Inc. 10.6	Dec. 26.1	Dec. 26.8
Pacific	Inc. 16.3	Dec. 6.6	Dec. 19.9
Mexican	Inc. 3.1	Inc. 36.5	Inc. 4.2
Totals	Inc. 9.6	Dec. 3.2	Dec. 11.5

The above table brings out the interesting fact that every group of railroads in the United States showed a gain in gross earnings in 1895 over 1894, and that but one (and that the southern) showed any falling off in net earnings from the preceding year. The southern railroads, however, in 1894 showed a gain in net over 1893, and the falling off from 1894 was due to the smaller cotton crop movement. One of the best showings made by any group of railroads is that reported by the eastern and middle states railroads which show a gain not only over 1894, but also over 1893, a year of very large traffic, and this is true not only in gross but in net earnings. The nature of the business done by the granger and central western railroads in 1895 is best shown by the proportionately larger gains in net than in gross earnings reported by those two groups. The poorest showing compared with 1893 is that reported by the southwestern railroads, where the falling off was very large, and the next heaviest decrease is that of the coal roads. The favorable showing made by the eastern roads, practically in advance of those in other sections of the country, is striking confirmation of the reports that the revival in trade first became actually manifest in the east. Perhaps the best illustration of the steady growth of improvement in railroad earnings is furnished by the following table, which shows the position of the various groups of railroads at the end of three, six and nine months periods, and at the end of the calendar year:

GROSS EARNINGS.

	Three months.	*Six months.*	*Nine months.*	*Year.*
Grangers	Dec. 11.5	Dec. 7.7	Dec. 1.3	Inc. 6.6
Central western	Inc. 5.0	Inc. 9.8	Inc. 8.9	Inc. 11.1
Trunk	Inc. 4.6	Inc. 0.9	Inc. 7.6	Inc. 8.3
Eastern	Inc. 7.8	Inc. 12.4	Inc. 10.9	Inc. 10.1
Coal	Inc. 10.8	Inc. 5.3	Inc. 5.4	Inc. 4.9
Southern	Dec. 3.1	Dec. 1.4	Inc. 1.9	Inc. 1.4
Southwestern	Dec. .7	Inc. 2.8	Inc. 4.1	Inc. 2.9
Pacific	Dec. 2.8	Dec. .2	Dec. .2	Inc. 2.9
Mexican	Inc. 8.6	Inc. 7.3	Inc. 15.5	Inc. 12.7
Totals	Inc. 1.6	Inc. 3.6	Inc. 5.3	Inc. 6.3

NET EARNINGS.

Grangers	Dec. 12.3	Dec. 3.4	Inc. 4.9	Inc. 17.5
Central western	Inc. 18.2	Inc. 25.0	Inc. 20.3	Inc. 23.8
Trunk	Inc. 4.0	Inc. 8.1	Inc. 6.8	Inc. 8.4
Eastern	Inc. 5.7	Inc. 23.2	Inc. 5.1	Inc. .8
Coal	Inc. 20.5	Inc. 1.0	Inc. 10.7	Inc. 7.6
Southern	Dec. 6.8	Dec. 7.1	Dec. 1.4	Dec. 2.2
Southwestern	Inc. 11.8	Inc. 16.0	Inc. 8.3	Inc. 10.6
Pacific	Dec. 3.2	Inc. 9.1	Inc. 6.2	Inc. 16.3
Mexican	Inc. 16.2	Inc. 23.0	Inc. 36.8	Inc. 3.1
Totals	Inc. 3.5	Inc. 8.1	Inc. 7.9	Inc. 9.6

It will be seen from the above that the granger roads showed particularly marked improvement as the year advanced, and the growth manifested by the earnings of the central western roads was also very considerable.

FOREIGN TRADE FIGURES FOR SEVEN MONTHS.

Preliminary statistics of the foreign trade of the country for January and the seven months ending therewith, corrected up to Saturday last, have been issued by the Chief of the Bureau of Statistics. They show a total value of exports for the month of January amounting to $87,108,292, which represents a decrease of over $5,400,000 as compared with the total for December, but an increase of nearly $5,900,000 as compared with January, 1895. The imports for January were valued at $64,602,638, which represents an increase of nearly $2,400,000 as compared with December, 1895, but a decrease of nearly $3,000,000 as compared with January, 1895. The dutiable imports in January exceeded in value those free of duty by over $2,300,000, whereas in January, 1895, the dutiable exceeded in value the free-of-duty imports by nearly $7,300,000. The exports for the month of January showed an excess of $22,505,654 over the imports, as compared with an excess of $13,682,064 in January, 1895.

For the seven months of the fiscal year ending with January last the total value of the exports was $525,103,233, which represented an increase of over $23,200,000 as compared with the corresponding period of the preceding fiscal year. The imports for the same period were valued at $474,675,715, which represented an increase of over $66,700,000 as compared with those for the corresponding period of the preceding fiscal year. During the seven months' period ending with January, 1895, the free-of-duty exceeded the dutiable imports in value by over $6,700,000, whereas for the seven months' period ending with last month the dutiable exceeded in value the free-of-duty imports by over $14,800,000. During both periods there was an excess of exports, which amounted to $50,427,518 in the seven months of the current year under consideration, as compared with $93,985,299 in the corresponding seven months of the last fiscal year.

Imports and exports of gold almost balanced each other in January last, the exports being valued at $10,566,516 and the imports at $19,294,290, the figures showing, it will be seen, a slight excess on the side of exports, viz., $272,226. For the corresponding month last year the exports showed, on the other hand, an excess of $24,698,489. For the seven months' period the exports of gold coin and bullion amounted to $79,940,101 and the imports to $16,848,089, an excess on the side of exports, as will be seen, of $63,092,021. These figures do not include the statistics of exports and imports of ore, which do not cut any very great figure, the exports for the seven months amounting to only $49,852 and the imports to $1,154,860. The exports of silver coin and bullion for the month of January amounted to $4,902,629 and the imports to $1,009,298, an excess of exports amounting to $3,893,331, as compared with an excess of $3,093,137. The exports of silver coin and bullion amounted to $34,838,355 and the imports to $7,982,874, showing an excess of exports of silver amounting to $26,855,481, as compared with an excess on the same side of $21,182,928. These figures do not include the movement of silver ore, which is relatively more important than that of gold ore. The exports of silver ore for the seven months ending with January were valued at $426,461 and the imports at $8,447,619, showing an excess of imports for the seven months amounting to $8,021,158, as compared with an excess on the same side of $5,524,373 for the corresponding seven months of the previous fiscal year.

THE FOREIGN VIEW OF THE LOAN.

The London papers which come to hand up to the close of this week labor in their treatment of the recent United States government bond subscription and its effects under one disadvantage. Their opinions were formed prior to the vote of our House of Representatives upon the Senate's free silver substitute for the low rate bond bill originally passed by the House. The crushing nature of the defeat administered to the silverites by the branch of Congress which at present represents the sentiment of the majority of the people of the country on the financial question, in reality as well as in theory, had not, of course, yet been shown when these English criticisms of the loan and its bearings upon the future situation of the Treasury were penned. In fact, the development in question at Washington seems to have been correctly interpreted by speculative interests abroad, if we can judge by the renewed interest which London has shown in our securities and the eager buying of them for foreign account, which has been one of the features of the week's stock market. It would therefore seem that the forebodings in which some of the prominent financial authorities abroad indulge over the alleged insufficiency of the means of relief just adopted by our Treasury have been since modified, in view of the signal exhibition of hostility to silver ideas on the part of the House.

The views of an authority like the London *Statist* on a matter of this kind are, however, of importance under any conditions. For this reason its remarks, in an article under the caption of "The New American Loan," in its issue of February 8, may be quoted. It says: "The new American loan has been even a greater success than was generally expected. We do not refer so much to the fact that it has been covered over five times, for we all know how little that means. It comes simply to this, that those who wanted to get a certain proportion of the loan applied for many times more than they expected to get. But the prices are very high. The time was undoubtedly unfavorable. With a dispute pending with the British Empire, with the currency in the utmost disorder, the Senate passing silver bills, and Europe looking askant on American securities, it speaks much, undoubtedly, for the public spirit of the American people, and for the financial strength of the country, that the loan has been taken at such high figures. Practically, it will yield the investor very little more than 3⅛ per cent. But the question of real importance for European readers is, How will the loan affect the Treasury?"

This last query the writer in the *Statist* proceeds to answer by pointing out that the present administration, which is pledged to fulfill all the country's obligations in gold, lasts for only thirteen months longer, and that in the meantime there will be a presidential election which may cause difficulties, and which may also change the policy as well as the personnel of the country's government. The article also overestimates the amount of gold which would be withdrawn from the Treasury in payment for the bonds, and takes the ground that: "If the Morgan syndicate gets a large part of the loan the Treasury will be strengthened to that extent; if it gets only a small part, the assistance afforded to the Treasury by the loan will be small." * * * * "Let us say, so as to take the most favorable view possible, that bankers and others who hold gold and wish to get the bonds are willing to pay three-fourths of the first installment, or 3,000,000 sterling. Then only 1,000,000 sterling, or less, would have to be withdrawn from the Treasury and paid in again. But the difficulty will come when the second and later installments fall due. Bankers may be quite willing to pay 2,000,000 or 3,000,000 sterling; but will they furnish the Treasury with 6,000,000 or 10,000,000 or 12,000,000 sterling? The Morgan syndicate may be prepared to do so, but it seems in the highest degree improbable that others could. What is likely is that bankers and financiers, other than the Morgan syndicate, will pay in 2,000,000 or 3,000,000 sterling of the first installment, will pay in, perhaps, £500,000 or £1,000,000 of the second, and will pay in none of the later installments; and, if so, the whole of these installments will have to come out of the Treasury, so far as they are not paid by the syndicate. And it should never be lost sight of that, if the allotment to the syndicate is small, the withdrawals from the Treasury may become so large that the Treasury will have to refuse to part with the metal. Then gold would certainly go to a premium, and the mischief would be done."

Pursuing the effects upon the speculative situation, the writer says: "Having got over the series of frights given to the market of late, speculators are more inclined than for some time past to venture into the American market. They say that the new loan will enable the Treasury to pay its way for some time to come; that trade is improving; that traffics are augmenting; that the Venezuelan dispute is sure to be settled amicably, and that peace will be maintained in Europe. Therefore, they think that prices must go higher. It is quite possible that they may go higher—indeed, we think they will—for a time. Twelve months ago the great Anglo-American syndicate, formed to lend to the United States government,

supported the Treasury for about eight months, and enabled a very considerable speculation to be carried on in the interval. Very likely the bankers and financial houses who are now lending are doing so in the hope of selling at a profit to the ordinary investor, and that they will likewise support the Treasury, and so encourage speculation in the market. But, for all that, the market is too dangerous; and we repeat the advice we have so often given to our readers in the past—to keep aloof from the American market."

It is evident, however, that the last warning has fallen on deaf ears, so far as the London speculative community is concerned. As already mentioned, the defeat of the silver forces by the House has changed the outlook a great deal, and nowhere has the effect been greater than upon the opinions of foreign financial interests as to our currency and Treasury situation.

THE OPPRESSION OF RAILROADS.

As usually is the case, the Chicago & Alton Railroad Company is the first of the great western railroad systems to present its annual report of operations for the year 1895, and, as usual, the report also contains some valuable and interesting remarks by the veteran president of the company, Mr. Blackstone. On this occasion the figures presented as to the results of the company's operations during the year make a satisfactory exhibit. There are fair increases in both gross and net earnings, while the surplus over all charges and dividends (which the Alton, almost alone among the roads of its section, has never been forced to vary from the regular 8 per cent. rate in both common and preferred) is $230,936 for the year, against $196,971 in 1894, and $72,730 in 1893. A comparison of the results for the three past years is given herewith, in tabular form, as follows:

Year.	1895.	1894.	1893.
Gross earnings	$6,802,486	$6,292,236	$7,566,640
Op. expenses	3,982,992	3,628,687	4,655,829
Net earnings	$2,819,494	$2,663,549	$2,910,751
Other income	241,525	482,995	305,468
Total income	$3,061,019	$3,146,544	$3,216,219
Rentals	422,772	632,986	653,891
Balance	$2,638,247	$2,513,558	$2,562,328
Interest	579,618	527,503	632,037
Balance	$2,058,629	$1,986,055	$1,930,291
Betterments	18,764	26,217	217,833
Balance	$2,039,865	$1,959,838	$1,712,458
Sinking fund	24,481	33,423	57,342
Balance	$2,015,384	$1,926,405	$1,655,116
Dividends	1,778,448	1,729,424	1,582,386
Balance	$236,936	$196,971	$72,730
Old claims paid	203,704	.....	.....
Surplus	$33,232	.....	.....
Total surplus	3,156,545	$3,123,340	$2,926,350

The interest in the document in question is not so much in this exhibition of the proverbial prudence and conservatism of the Alton management. It is found in the tenor of the remarks made by the company's president upon what he terms "state control of railroads." According to Mr. Blackstone, who cannot by any stretch be accused of being speculative in his methods, or of being the head of a company which waters its stock, or is guilty of the kind of high crimes and misdemeanors usually laid at the door of such corporations, the general tendency of legislation is unjust and discriminating to the injury of owners of railroad property. He holds that the doctrine settled at an early day in our jurisprudence, that the grant of a charter to a corporation was a contract within the meaning of the contract clause of the Constitution, has been nullified where the corporations were railroads. "The people" he says, "have failed to remember their side of the contract. One of the provisions of such contracts is that the railroads shall have power to collect reasonable rates, but Illinois (and other states, it may be added,) has passed a law enabling a state board to limit railway rates at its discretion." Mr. Blackstone also argues that the contract implied in the grant of a railroad charter bound the state to keep railroad taxes on a par with other taxes, "yet since 1887 the assessed valuation of other property in Illinois has been reduced 15 per cent. while the assessment of railroad property has been increased over 113 per cent."

These remarks are not applicable to the railroad interests of Illinois alone. The same tendencies are observable in other states, though few corporations can make a protest against them with the same good grace that the Alton's president can, considering how sternly the managers of that property have in the past set their face against overcapitalization or the other devices which are at the root of these systematic attempts on the part of the states to obtain as large a revenue as possible for themselves from the railroads through the form of taxation. It is this spirit, too, which occasions the pronounced opposition to any amendment of the Interstate Commerce law for the purpose of allowing railroads to form pools and maintain rates, while it is also the reason for the desire in certain portions of the west that the United States government should take possession of the subsidized Pacific railroads and operate the lines, presumably at such rates that they would be a loss to the government. It is certain that Mr. Blackstone's views, however much truth there is in them, will not receive any popular support, particularly in his own section. The railroad corporation there is not regarded as an institution possessing through its charter a contract with the state, but as one possessing privileges of a very valuable character, which can be curtailed or regulated at will by the sovereign power. This, moreover, is embodied in the laws under which most of the western roads were constructed, and in the present drift of public opinion it is safe to say that relief from the discriminations complained of is an impossibility. In fact, the tendency is the other way, and in the direction of placing additional burdens upon the railroad and other corporations, and still further restricting them in their operations in spite of the plain evidences that natural competition alone would reduce rates to the lowest possible level, and that increased burdens of taxation simply aggravate the condition of bankruptcy into which such a large proportion of the roads have been plunged.

INVESTIGATING THE "COAL TRUST."

Legislative proceedings against the so-called anthracite coal combination have been expected. When the presidents of the coal roads made their recent agreement to restrict the production of anthracite to the requirements of the market, and to cease the senseless competition which involved a loss on every ton mined, they no doubt foresaw the opposition of this character their action would provoke. As indicated in these columns a fortnight ago, the policy of the coal managers has been not to arbitrarily advance prices, but to strictly regulate the amount of the output till the enormous accumulations of unsold coal were worked off, when the market could take care of itself and prices would naturally rise to a remunerative level.

As expected, however, the "coal trust," to use a popular name applied to the arrangement by the newspapers, has already been the object of attack. The New Jersey legislature was the first to consider the subject, but the action of the New York Assembly at Albany has, in this connection, attracted the most attention. In New Jersey the House of Delegates passed a resolution instructing the judiciary committee to bring in a bill making unlawful combinations or agreements of this character, and giving the law officers of the state additional powers to prevent them. In New York the measure finally adopted was a direction to the attorney-general requesting that official to investigate the alleged combination of coal interests to regulate and advance the price of coal to consumers, and to report such legislative action as he deemed necessary.

Mr. Hancock, the attorney-general of New York, in a communication to the legislature, has declined the task, on the ground that such an investigation would be a delegation of the powers of the legislature itself, and therefore impracticable. He says: "The question of the right of the legislature to delegate powers conferred upon that body by the legislation has been passed upon by the courts of this state on various cases. From an examination of cases touching this question, some of which contain a discussion of the general powers of the legislature, and also as to the limited and restricted powers of that body to delegate its authority, I am led to the conclusion that the legislature would not be justified in attempting by joint resolution of the Senate and Assembly to confer upon the attorney-general or any state officer the powers of an investigating committee appointed by either house. Assuming that a state officer undertook such investigation, and witnesses refused to appear and testify or produce books and papers, would such a refusal be a contempt of the legislature? * * * Accordingly, I submit for your consideration two proposed laws, which must necessarily be enacted before the attorney-general would be justified in attempting to enter upon the investigation referred to in your resolution. One is an amendment, or rather an act supplemental, to the executive law, and authorizes the attorney-general, either personally or by a commissioner to be appointed by him, to compel the attendance of witnesses before him or the commissioner, who, upon such attendance, may be examined under oath and compelled to disclose the facts relative to any unlawful contract or combination in restraint of competition in trade. Something more is necessary, in order to protect the people from the effects of unlawful combinations and trusts, than the mere right to maintain an action. Some means must be provided to ascertain the facts upon which an action may be maintained."

After suggesting another amendment designed to reinforce the laws relating to illegal combinations, so that the present provisions would extend to foreign corporations doing business in the state, or to instances where the combination has been entered into outside of the state, Mr. Hancock proceeds to say: "It is not the policy of the law or of the courts to destroy corporations through which large volumes of business are carried on, and in which frequently the accumulations and earnings of citizens are invested, unless the case be one of great misconduct. It may frequently be more desirable to restrain illegal acts than to inflict the extreme penalty of the law. The code of civil procedure does not in express terms authorize the commencement of such an action, especially in the case of foreign corporations."

It will be noted that both in New Jersey and in New York the legislators have shrunk from the first propositions to have a legislative investigation of the so-called coal trust. Wall street may be wrong, but it appears to have regarded the movement in the light of what is inelegantly but very bluntly called a "strike" on the part of the legislators. Whether knowledge of the fact that their action would be so regarded has influenced the legislatures is a question. The whole subject appears to be pretty well summed up in the financial columns of one of the leading papers, as follows: "There is hesitation both at Albany and Trenton. The objection is made by some legislators that such investigations cost a good deal of money and result in nothing. In New Jersey the House has passed a resolution instructing the judiciary committee to bring in a bill making unlawful agreements and combinations, and giving the officers of the state additional power to prevent the consummation of such agreements. The street view is that there is less interest in such matters than there was. It is not likely that any new law is necessary in New Jersey or any other state, and the way to treat people who break laws is not to investigate their conduct but to take them into court. If the coal people have not done enough to warrant arrest they had better be let alone until they do, and when they do, the state authorities ought to act promptly. The coal stocks, which were depressed when the movement at Albany and Trenton began, have consequently recovered."

EXCLUDING ILLITERATE IMMIGRANTS.

Immigration is again on the increase, as was made apparent by the fact that the number of immigrants coming to the United States during the twelve months ending in December was about 30 per cent. in excess of those coming over in the year 1894. It is true that the immigration in the year 1895 did not equal in volume that for many preceding years, but it is on the increase again after a temporary check, and, what is of perhaps more consequence, it contains a greater proportion of less readily assimilable ethnic elements than used to be the case formerly. Apart from this consideration even it is evident that the stream of foreign immigration needs sifting in order to minimize as far as possible the chances of increasing by this means the burden of our dependent and defective classes.
